A roadmap that reads down the page.

A roadmap is a wide grid — workstreams down, phases across. On a tall deck those columns crush. So portrait picks the form the engine already had: the phase cards, stacked into one column you read top to bottom.

Same table, the right shape for the box.

You author the same workstream × phase table. The kernel reads the deck's orientation and, on a tall box, transposes it to phase cards and stacks them — no second authoring.

- **Phases become cards**, each carrying its workstream rows.
- **Cards stack** down the page; the header collapses to one line and each row reads `LABEL · value` so three or four phases fit.
- **Landscape is untouched** — the wide table renders exactly as before.

H1 2026 → H2 2026

Platform roadmap by workstream.

PHASE 01 Q1

THREE-HORIZON PLANNING

Where the framework invests.

PHASE 01 Now

SIGNAL INTAKE
- ✓ Connector v1

SCORING
- ✓ Equal weights

DECISION LOG
- ✓ Append schema

ADOPTION
- ✓ One team

PHASE 02 Next

SIGNAL INTAKE
- ~~Multi-source~~

SCORING
- ~~Calibration~~

DECISION LOG
- ~~Auto-pairing~~

ADOPTION
- − Second team

PHASE 03 Later

SIGNAL INTAKE
- ○ Auto-routing

SCORING
- ○ Per-decision

DECISION LOG
- ○ Auditor export

ADOPTION
- ○ Org-wide

✓ Shipped − In flight ○ Planned ~ Out of scope

Every chart now meets the box where it is.

Funnel, the keyed dials, the gantt, the state machine, the journey, and now the roadmap — the whole family restructures for a tall canvas instead of shrinking into a band. A portrait deck is a first-class surface, not an afterthought.
