STATEMENT · SPLIT · SERIES

premise

A framing claim beside a vertically centered ledger of parallel rows — a number, a term, a description, and a right-aligned note, each row colored by its own categorical hue.

Growth is a change in thinking, not title.

Six cognitive verbs map the questions an engineer learns to ask — your level is the highest verb you reliably own, and how far that thinking travels.

01	**Remember**	Recall facts, syntax, rules.	How is this done?
02	**Understand**	Explain behavior and dependencies.	Why does it work?
03	**Apply**	Use patterns in new contexts.	How do I make it work here?
04	**Analyze**	Decompose across boundaries.	Where does it break?
05	**Evaluate**	Judge options against strategy.	Which option should win?
06	**Create**	Synthesize what isn't there.	What should exist?

Eight is where one palette cycle ends.

Past eight rows the categorical hues repeat, so eight is this layout's practical ceiling.

01	Novice	Follows a script closely.	Can you repeat it?
02	Advanced ...	Recognizes recurring situations.	Have you seen this before?
03	Competent	Plans deliberately.	What's the goal here?
04	Proficient	Sees the whole, not just ru...	What does the situation call for?
05	Expert	Acts on intuition from experience.	What feels right?
06	Master	Refines the craft itself.	What could be better?
07	Practitioner	Teaches the craft to others.	How do I pass this on?
08	Steward	Shapes the field's standar...	What should the craft become?

Growth is a change in thinking, not title.

When NOT to reach for premise.

Rows with unequal structure

Every row must carry all four segments in the same order. A row missing its trailing note, or with a two-clause description, breaks the ledger's scan rhythm — trim or pad it to match its siblings.

More than eight rows

The categorical palette cycles at eight; past that, split into two premise slides by group rather than repeating hues.

The heading summarizes the rows instead of claiming something

"Six cognitive verbs" restates the list; "growth is a change in thinking, not title" claims why the list matters. If the heading can't be argued with, it's a caption, not a premise.

RELATED COMPONENTS

See also.

`split-panel` — the featured element deserves its own colored panel, not a shared background

`list-tabular` — the rows need MORE than four fields, or a header row naming the columns

`cards-stack` — each term needs its own multi-sentence body, not a one-clause row

`glossary` — the terms are unordered and there's no claim to make about their sequence
