SERIES B · RAISING $32M

# Saffron

Autonomous accounts payable for mid-market manufacturers.

# Saffron runs accounts payable on its own — so finance teams stop chasing paper.

Saffron is autonomous accounts payable for mid-market manufacturers. We ingest every invoice, match it, decide it, and pay it — turning a back-office cost center into software that runs in the background.

# Mid-market manufacturers still run accounts payable by hand.

A $200M manufacturer processes 40,000 invoices a year across email, EDI, and paper. Clerks key them in, chase approvals, and reconcile by spreadsheet — slow, error-prone, impossible to scale.

- Late-payment penalties and missed early-pay discounts add up to six figures a year.
- Manual matching is where most invoice fraud slips through.

THE COST OF MANUAL AP

# 18 minutes

to process a single invoice by hand — at 40,000 invoices a year, that is a full-time team doing nothing else.

# Two shifts just made autonomous AP inevitable.

E-invoicing mandates are going live across the EU and US, forcing structured invoice data for the first time. At the same moment, document AI finally crossed the accuracy bar accounts payable demands.

- Mandates create the clean, structured data autonomy needs.
- AI crossed 99% line-level extraction accuracy in 2025.

# One platform takes accounts payable from inbox to paid — untouched.

Saffron connects to the ERP a manufacturer already runs, learns its approval policy, and closes 91% of invoices with no human in the loop. The AP team manages exceptions, not data entry.

# Four steps, no inbox: how Saffron closes an invoice on its own.

### Ingest

Captures invoices from email, EDI, and portals — any format, no templates to build.

### Match

Reconciles each line against the PO and receipt, surfacing only the true exceptions.

### Decide

Approves in-policy invoices and routes the rest to the right owner automatically.

### Pay

Schedules payment to capture early-pay discounts and avoid late penalties.
