When NOT to reach for pricing.

More than four tiers

Five-plus columns shrink below readability and the price comparison collapses. Curate to the tiers that matter, or use `table` for a dense feature-by-plan matrix.

Every tier marked popular

Elevate exactly one tier. Two ribbons cancel out and the eye has nowhere to land — the whole point of the marker is a single recommendation.

Features that drift between tiers

If each tier lists a different set of features, the columns can't be compared row-for-row. Keep the feature list and order identical; toggle inclusion with `[x]` / `[/]`.

An open ring for a feature the tier lacks

Use `[/]` (muted, struck through) for a feature your own tier leaves out. `[ ]` is an open ring — it reads 'not yet', which promises the feature is coming — and `[!]` is the red cross, which reads as a failure. Save `[!]` for a competitor's column.

RELATED COMPONENTS

See also.

`table` — a dense feature-by-plan matrix with many rows,
not a few highlighted features

`verdict-grid` — options scored on shared criteria, not priced
tiers

`cards-grid` — parallel items with no price and no shared
feature checklist

`decision` — the slide recommends one option outright rather
than presenting a price ladder

`big-number` — a single headline price, not a tiered comparison
