FINISH · THE SKETCH MODIFIER

A boardroom deck, drawn by hand.

The `sketch` finish swaps Lattice into a hand-drawn skin — felt-tip headings, a legible hand-sans for body, and boxes that read as sketched. It is palette-blind, so any theme colors it; here it rides the `carta` paper-and-ink palette.

HOW IT WORKS

Form, not color.

Turn it on once with `class: sketch` in the front matter and it propagates to every slide. Every stroke is drawn in a palette token, so swapping `theme: carta` for `theme: indaco` recolours the whole sketch in blue without touching a layout.

WHY IT READS AS HAND-MADE

Three moves do the work.

Handwriting

Caveat carries the headings; Shantell Sans keeps body prose legible across a dense slide.

Drawn boxes

An asymmetric corner radius plus an offset ink stroke turns each card into a sketched rectangle.

A human tilt

Every other card rotates a fraction of a degree, so the grid reads placed-by-hand, not stamped.

THE FINISH TRAVELS

It is not tied to one layout.

Palette-blind by contract

Every stroke resolves through `var(--token)`, so the finish inherits the active theme's hue.

PDF-safe by design

Type, border geometry, and real rough.js strokes — plain SVG paths. No SVG *filter*, which is the thing that collapses print scaling.

Opt body back to clean

Add `sketch-clean-body` to keep the hand headings and boxes while prose stays crisp.

ONE HAND, EVERY SURFACE

Not just cards-grid.

Build in-house

Certified | Residency | Export

Full control of every axis, and three engineer-quarters from having any of it.

Vendor West

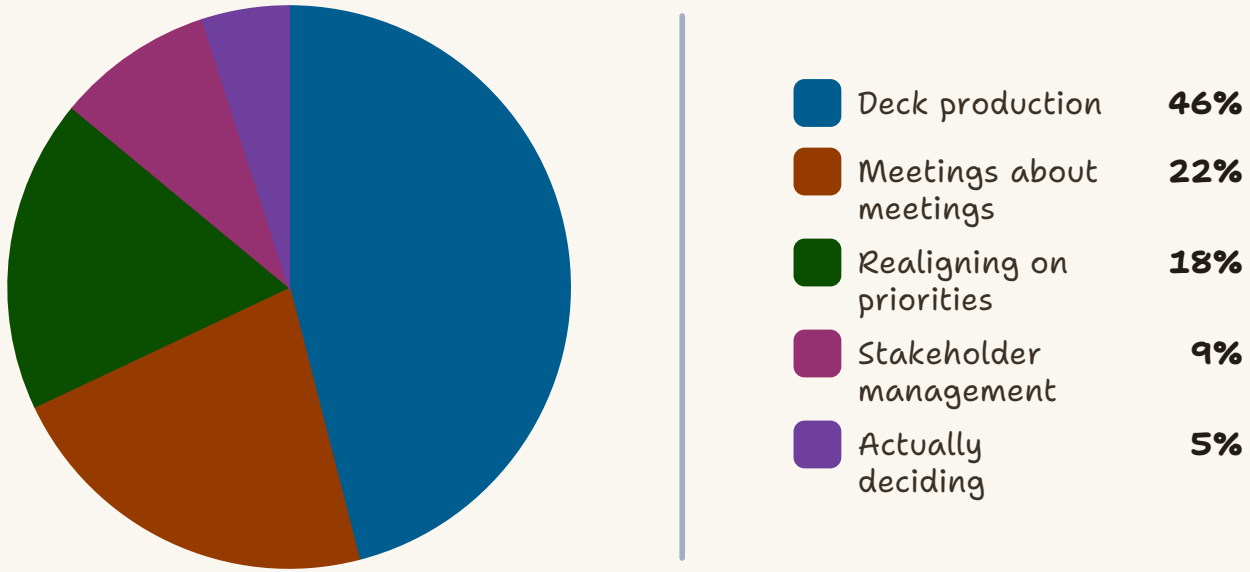

Certified | Residency | Export

Certified, in-region, and self-serve on every axis. Recommended.

CHARTS UNDER SKETCH

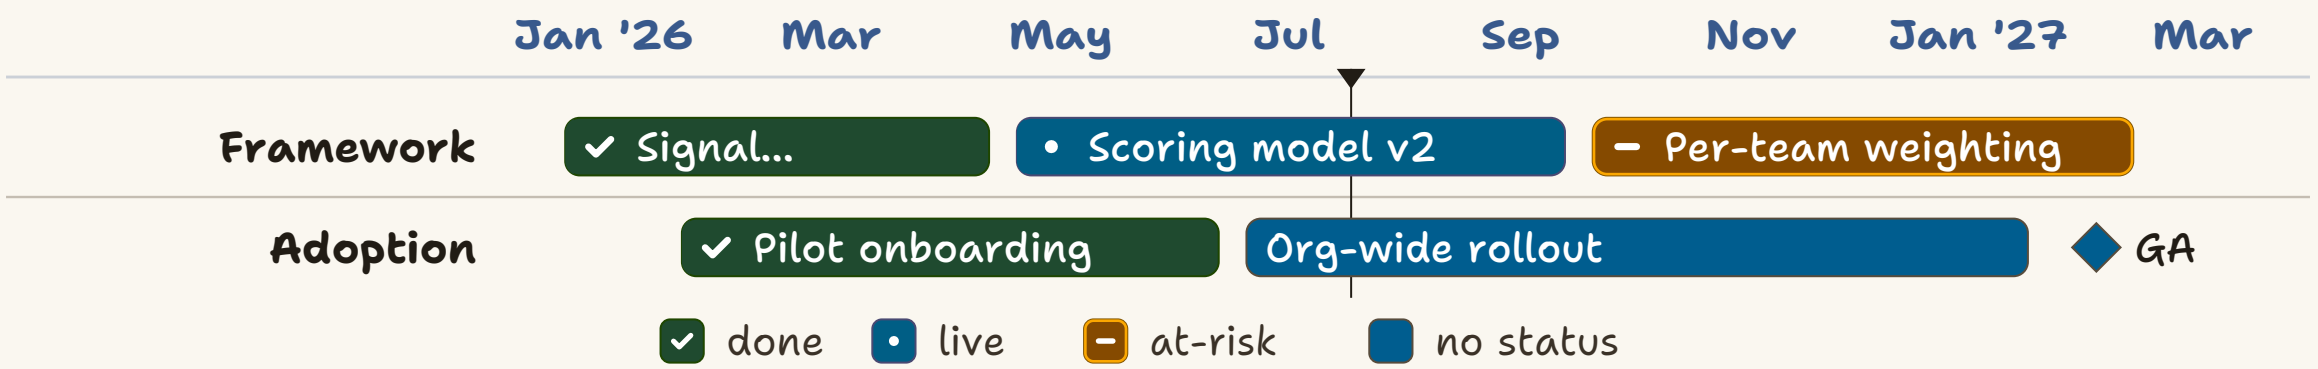

The frame is drawn; the data is exact.

The finish draws the lines a slide rules for itself, and reskins the heading and the legend — but a chart's SVG wedges keep their own precise geometry, so the numbers never wobble.

The calendar reads in the same hand as the plan above it.

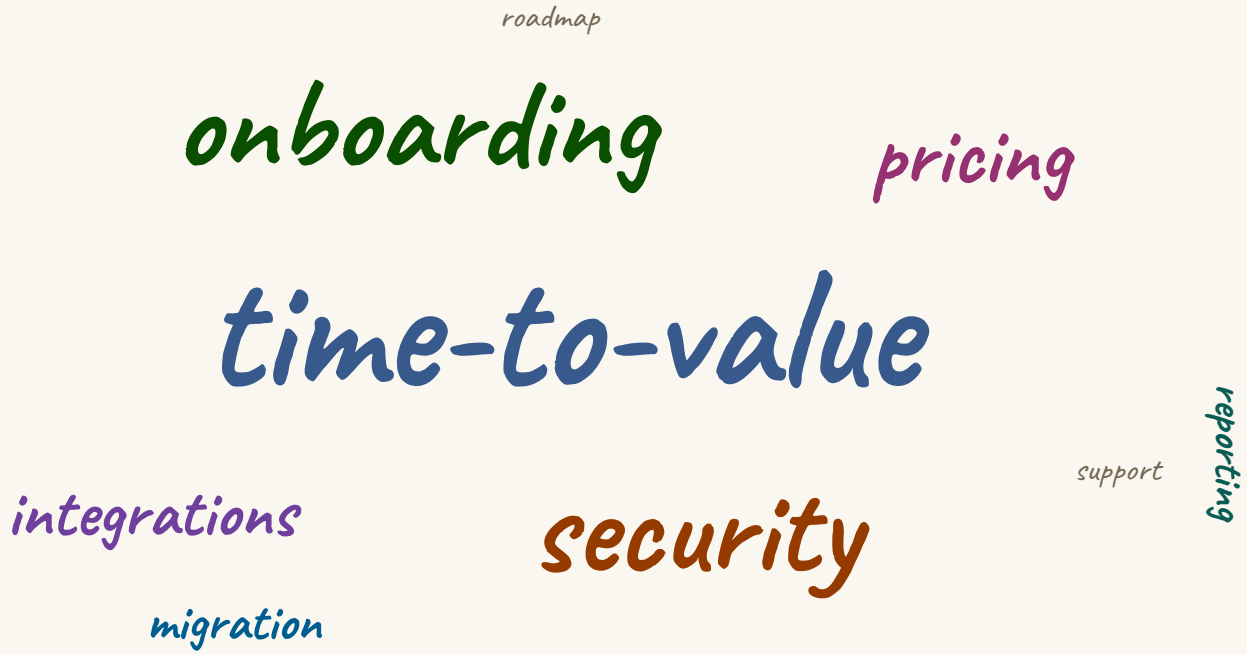

Every tick is drawn, not typeset. The hand sets wider than mono, so a crowded axis thins itself and the months that remain keep their air.

THE LAST MACHINE-FACED LABELS

Even the legend that explains the cloud is drawn.

The words were always hand-drawn; the small print was not. The `size = frequency` *key and its more/less ends now match them.*

SIZE = FREQUENCY

NOTHING IS LEFT MACHINE-FACED

Every label wears the hand, not just the prose.

01	*Counters*	Row numbers and card badges, drawn not typeset	FONT-LABEL
02	*Column heads*	Table headers matching the rows beneath	FONT-LABEL
03	*Chips*	Status pills, redline tags, corner stamps	PILL-FONT
04	*Chart figures*	Legend values and ticks, still column-aligned	FONT-LABEL
05	*Real code*	Inline `code`, fenced blocks, math — mono on purpose	FONT-MONO

DIAGRAMS UNDER SKETCH

The flowchart is drawn by the same hand.

BEYOND THE CARDS

The grid is hand-ruled too.

SURFACE	DRAWN BY	LINE
This table	rough.js	frame + row rules
Heading rule	rough.js	the masthead/stage seam
Dividers	rough.js	one stroke
Cards	CSS radius	box + tilt
Photos & code	nothing	left untouched

✦ *Every rule here is a seeded rough.js stroke, drawn over the measured box. Cards convert next.*

ROWS, DRAWN

Each row is a sketched card.

Owns the visual contract — Design Lead

Holds `lattice.css` and signs off every token change before it ships.

Keeps both renderers honest — Engine Owner

Guards parity so the owned engine and the browser runtime never drift apart.

Carries the editorial voice — Narrative Lead

Edits every shipped deck so the prose reads aloud without a stumble.

THE LIST FAMILY, DRAWN

Each point sits in its own sketched box.

The list layout's rows are bordered cards — so they take the hand box and the offset ink.

Checklists ride a left spine; the spine stays its state color, the corners go hand-drawn.

An agenda's row rules ink up like a table's, instead of staying a printer's hairline.

READINESS, BY HAND

Go-live checklist for the sketch finish.

- [x] Every rule is a real rough.js stroke, seeded so renders repeat
- [x] Table frames, ledger rules, dividers, the masthead rule
- [x] Display numerals and labels ride the hand face
- [-] Boxes still bend a CSS radius; they convert next
- [ ] Hand-drawn chart marks, deferred with the SVG work

WHAT THE FINISH NOW COVERS

Every structure that draws its own line.

01 Table frames and their row rules — one stroke per boundary, edge to edge

02 The list-tabular ledger and the `list.principles` rules

03 The masthead rule, the `hr` divider, an agenda's active row

04 Cards, blockquotes and bordered rows — still CSS, converting next

FINISH · SKETCH

Sketched, but still boardroom.

Pair `sketch` with `carta` for paper-and-ink, or with any palette for the same hand on a different page.
