fit: pack · measured split

Pages hold as much as fits.

A slide that fits stays whole. A slide that overflows packs several items to a page, measured on the real render.

A slide that fits stays one page.

01 Where the quarter landed

17 Decisions for today

18 Questions

Long items take more room, so fewer fit a page.

Signal intake lands every source in one queue, normalized to one schema before anyone scores it.

The scoring model weighs each signal for confidence, recency and strategic fit, with weights each team sets once.

The decision log records every call with the signals behind it, the options weighed and the criteria applied.

The calibration loop checks outcomes against predictions every quarter and moves the weights that missed.

Escalation routes a contested call to the steering group within a week, with both readings written down.

The archive keeps every retired signal and the reason it was retired, so the next team can see what was tried.

Reporting rolls the log up into one page a month, so the board sees the calls and not the machinery.

Access stays with the owning team, and every read outside it is logged for the audit.

Eight cards pack two rows a page.

Signal intake →

Signal intake

Every source lands in one queue.

Scoring model

Each signal is weighed on three axes.

Decision log

Every call is written with its signals.

Calibration loop

Outcomes are checked against predictions.

Escalation

A contested call reaches the steering group.

Archive

Retired signals keep their reasons.

Reporting

One page a month for the board.

Access

Every outside read is logged.

Twelve rows still fit, so the checklist stays whole.

- Signal taxonomy ratified by the working group
- Scoring weights agreed by the steering committee
- Decision log live in staging

- Access rules reviewed by security
- Pilot teams trained, two still to go
- Operating rhythm on the calendar
- Reporting export fails on the largest account
- Archive retention period not yet settled

- [ ] Exec sponsor confirmed for the launch
- [ ] Board pack template signed off
- [ ] Rollout plan shared with every region
- [ ] Support runbook written

fit: pack

One line in the front matter, and the pages fill.
