

LABEL SETS • HEATMAP • THE KEY A RAMP WAS MISSING

Name the bands, or let the chart do it.

A heatmap's five tones carry meaning no reader can recover from the tones alone.

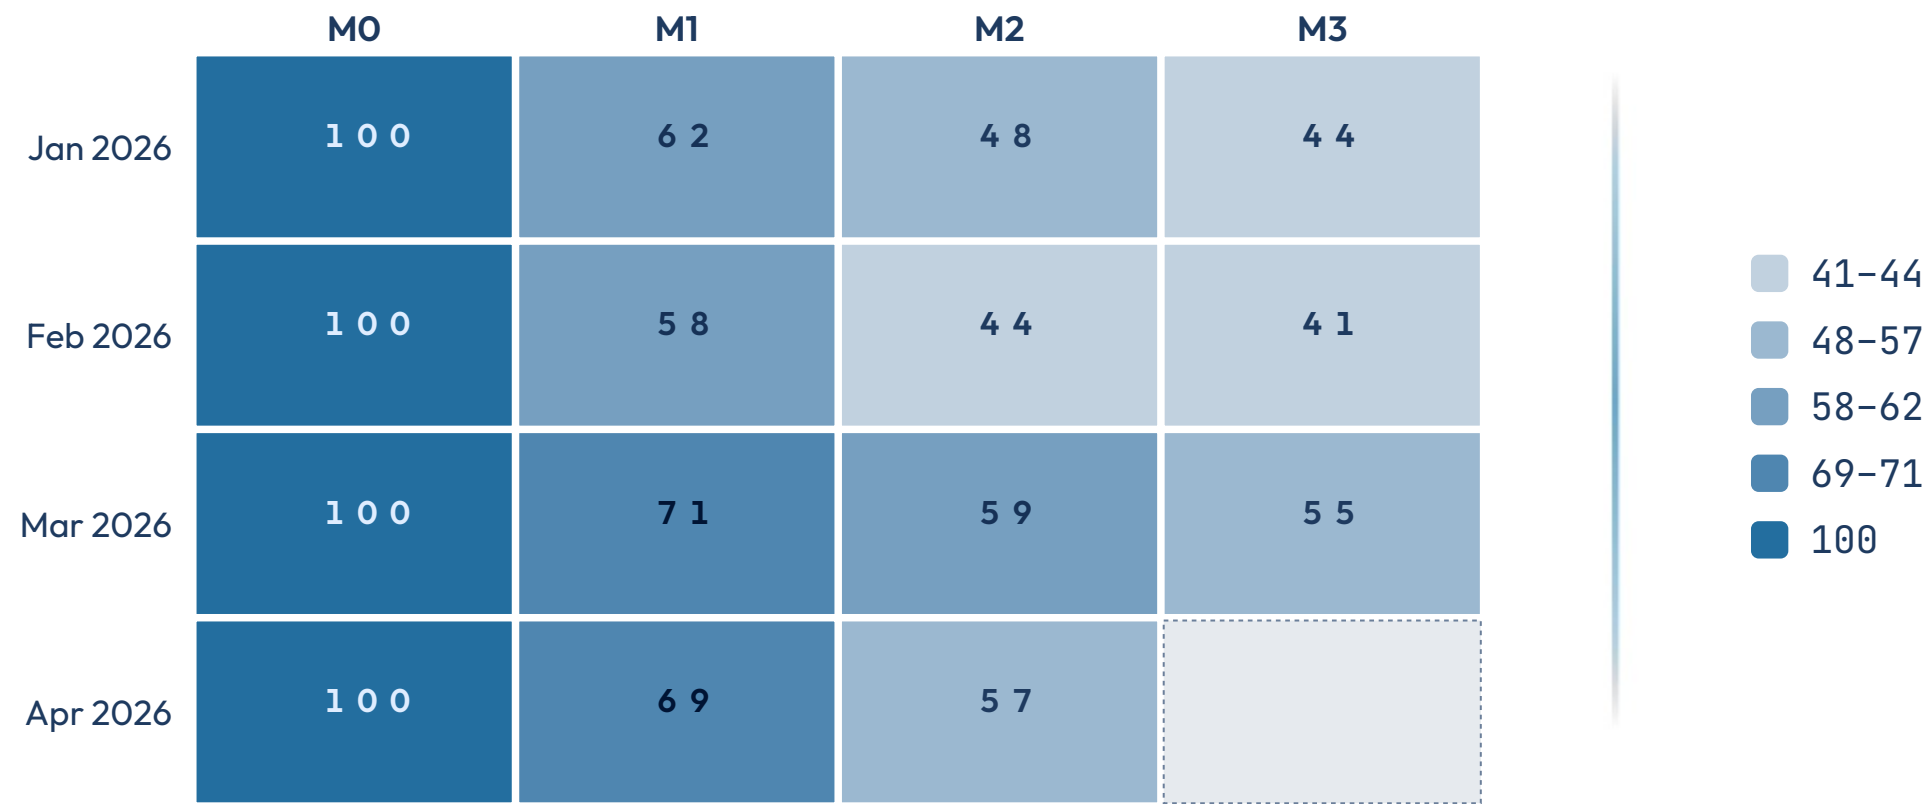

A **label set** names them — derived from the data by default, overridden where the words matter.

Without a key, the tones are unexplained.

	M0	M1	M2	M3
Jan 2026	1 0 0	6 2	4 8	4 4
Feb 2026	1 0 0	5 8	4 4	4 1
Mar 2026	1 0 0	7 1	5 9	5 5
Apr 2026	1 0 0	6 9	5 7	

RETENTION · 2026 COHORTS

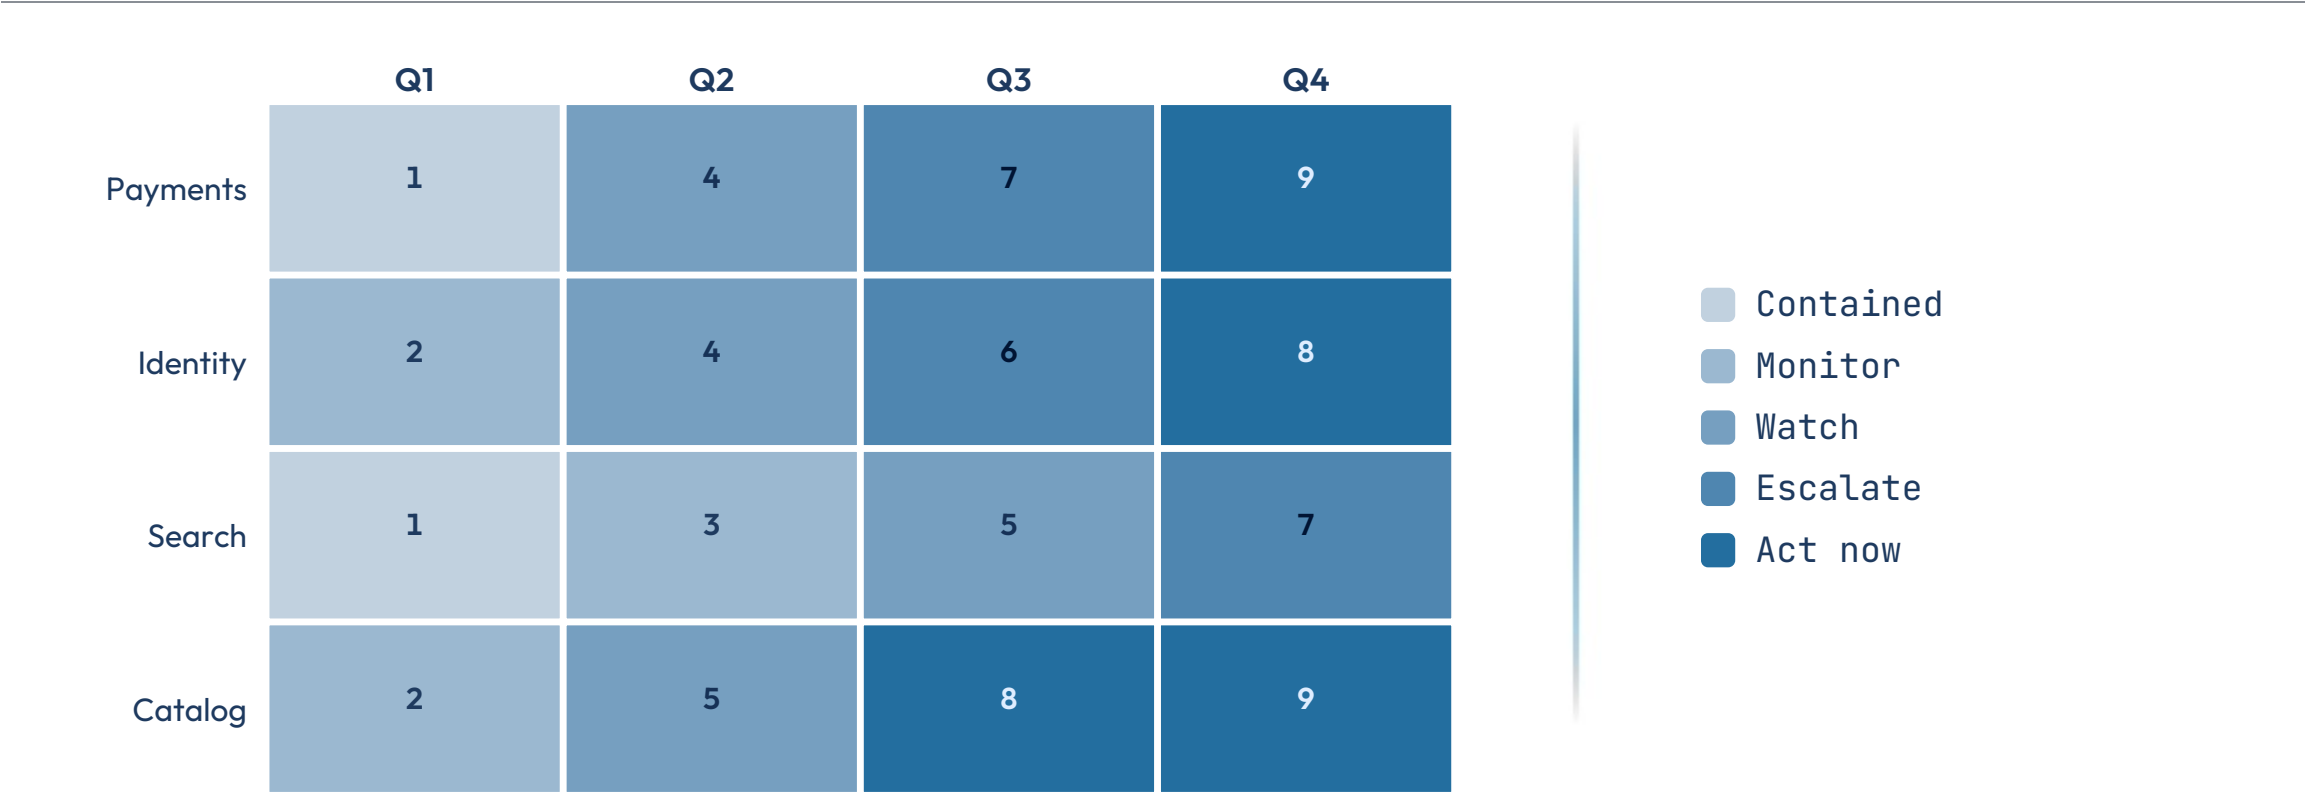

The chart can name its own bands.

RISK · BY SYSTEM AND QUARTER

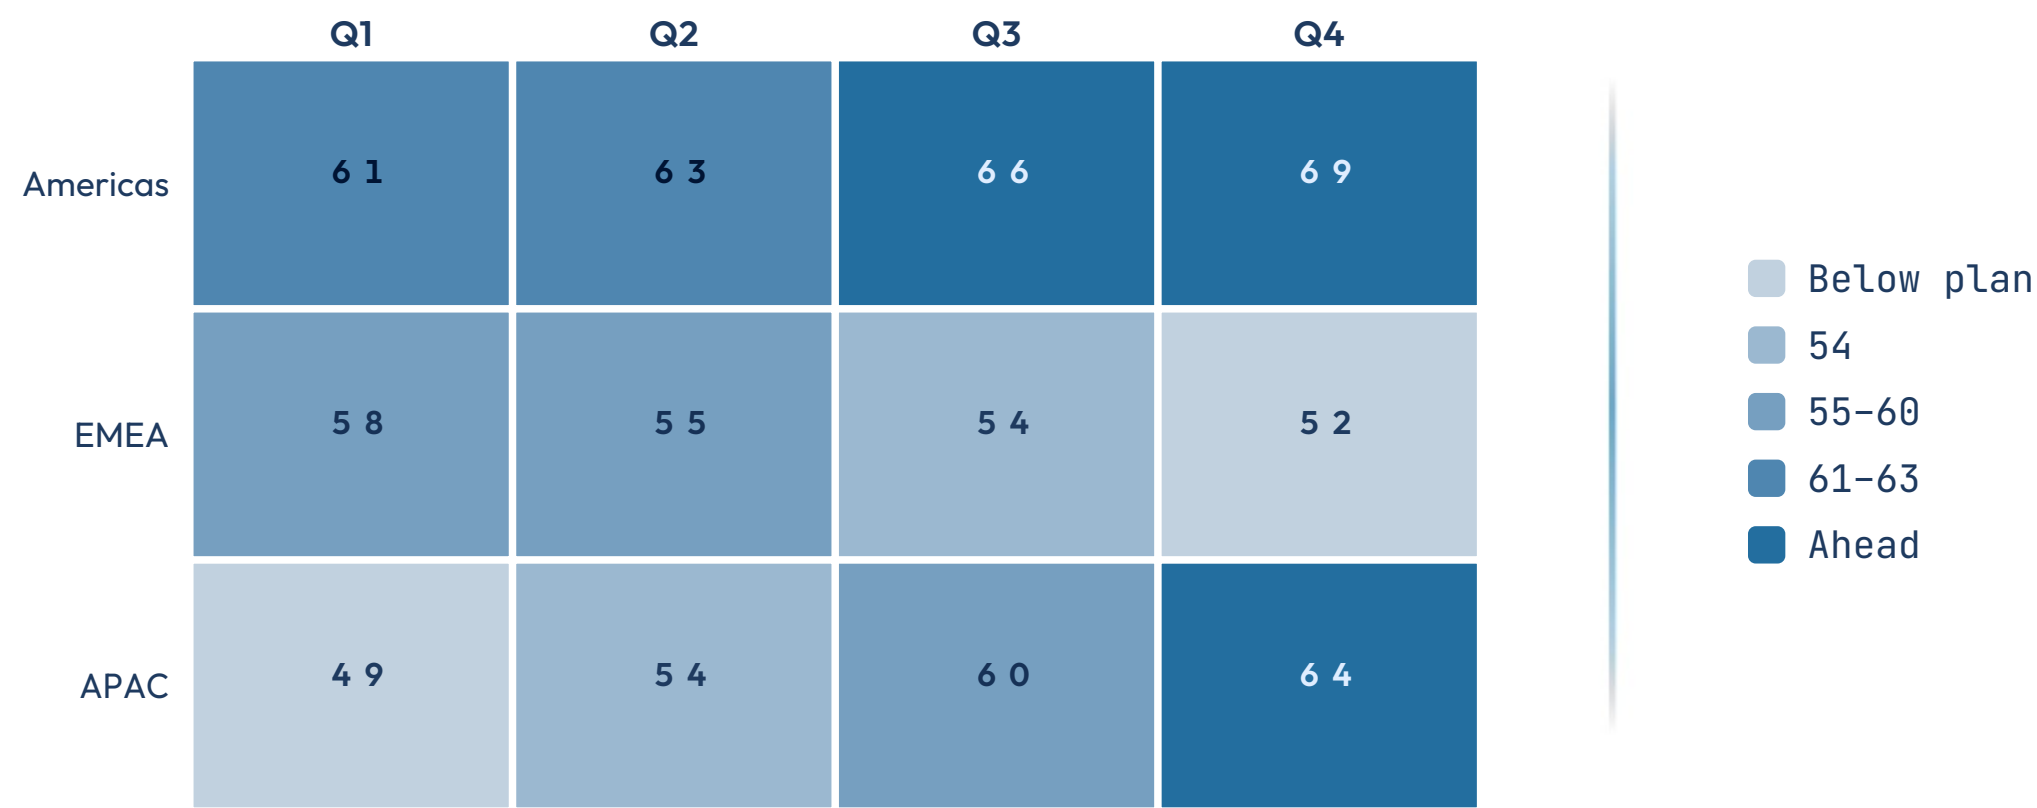

Where a number means nothing, a word means everything.

The key binds to the ramp STEP, one through five — not to a value in the table.

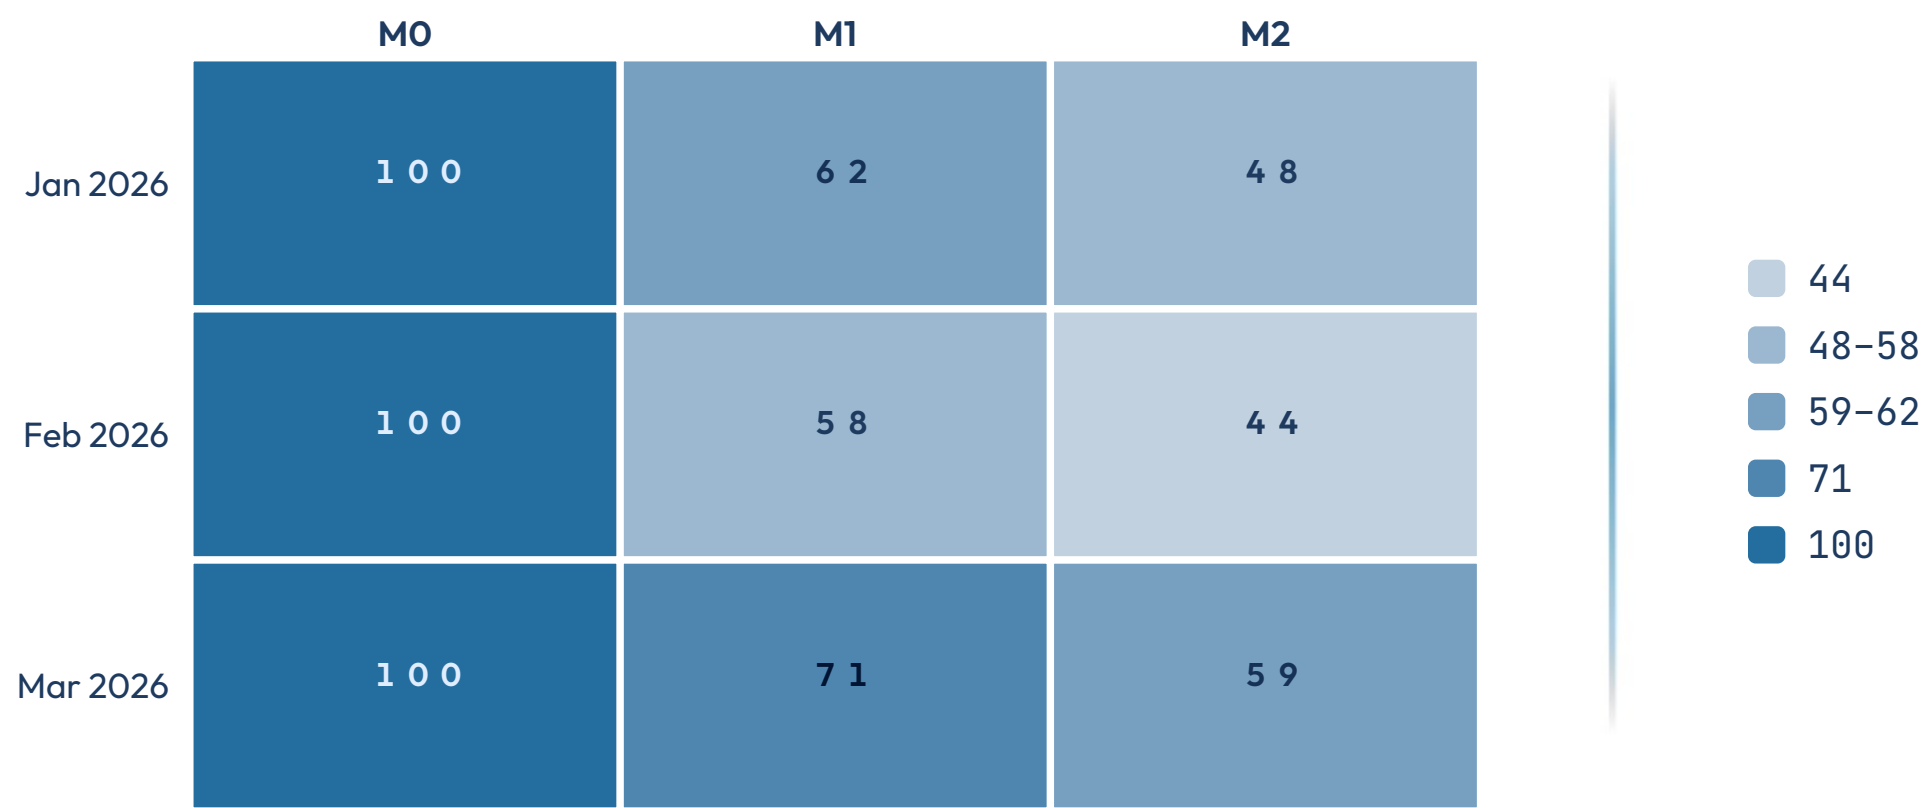

MARGIN · BY REGION

Name only the bands that carry a decision.

RETENTION · 2026 COHORTS

A cell can carry its own explanation.

One entry, three ways to write it.

- **Derived.**

- Add `scale` and the chart names each band by the values it covers.

- **Inline.**

- ``[{1, Cold}, {3, Warm}, {5, Hot}]`` above the table. Name some, keep the rest.

- **Per cell.**

- ``# prose`` inside a cell. Hover on screen, speaker note in print.
