

PANES · PROGRESS AND MATRIX-GRID

A row label keeps
its width in a pane

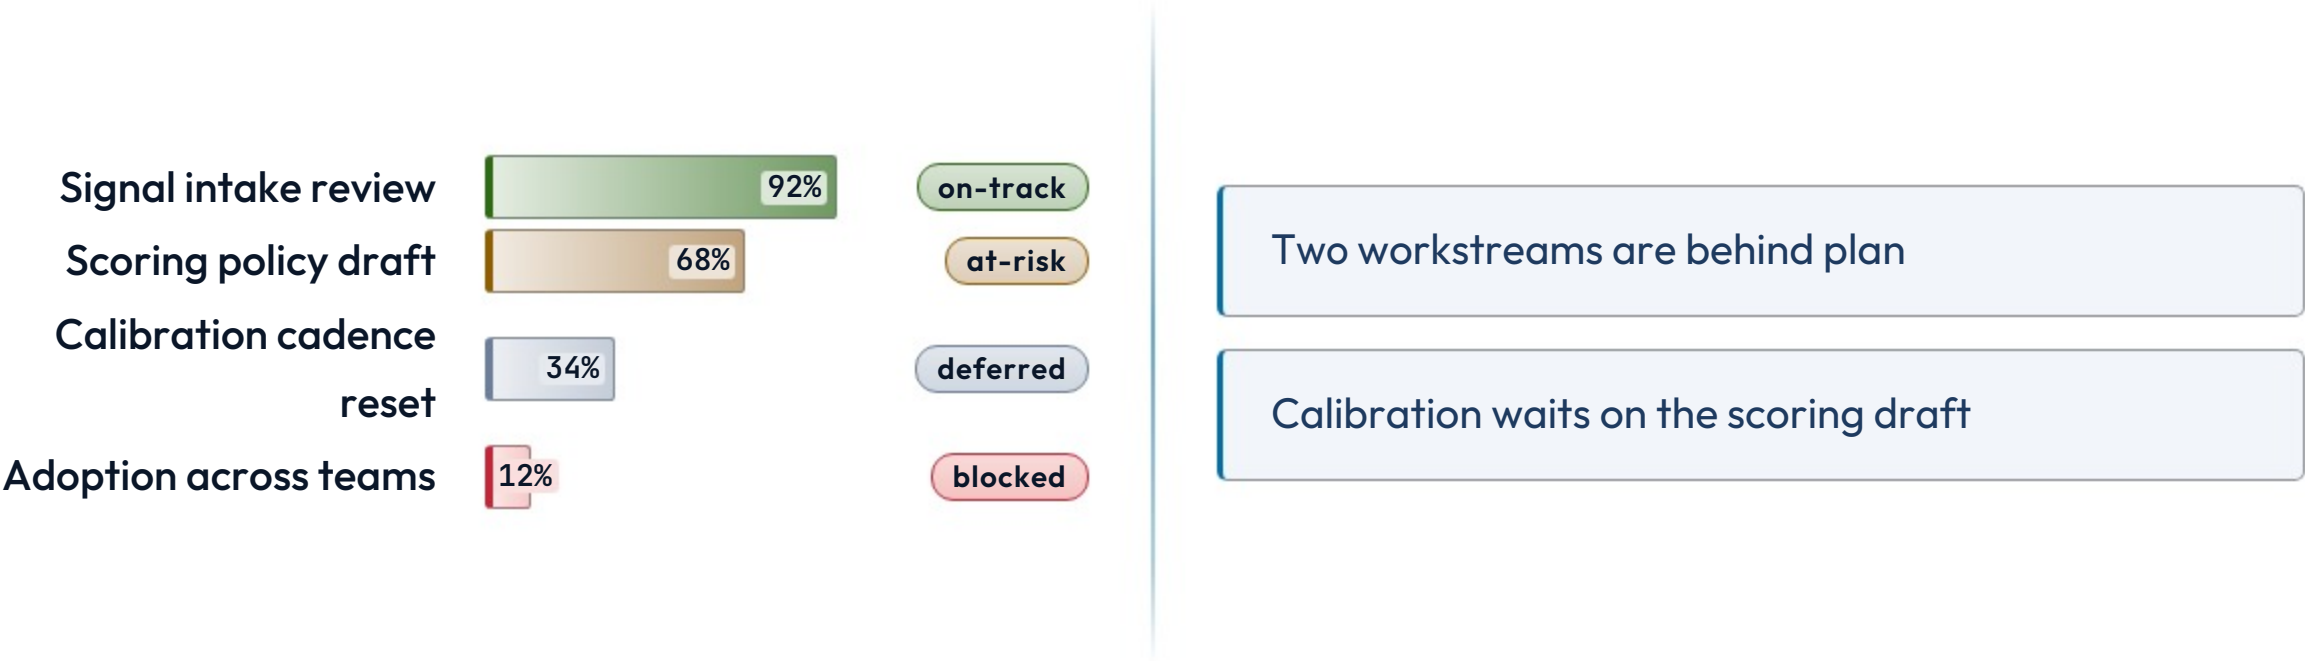

On a slide, the name column is a fifth of the width.

– This slide is unchanged: the fix applies only inside a pane.

H1 2026 · A 50% PANE

In a half-width pane the names still read in full.

— Before: a 105px column set every name one word per line, and the pane clipped at its fifth row.

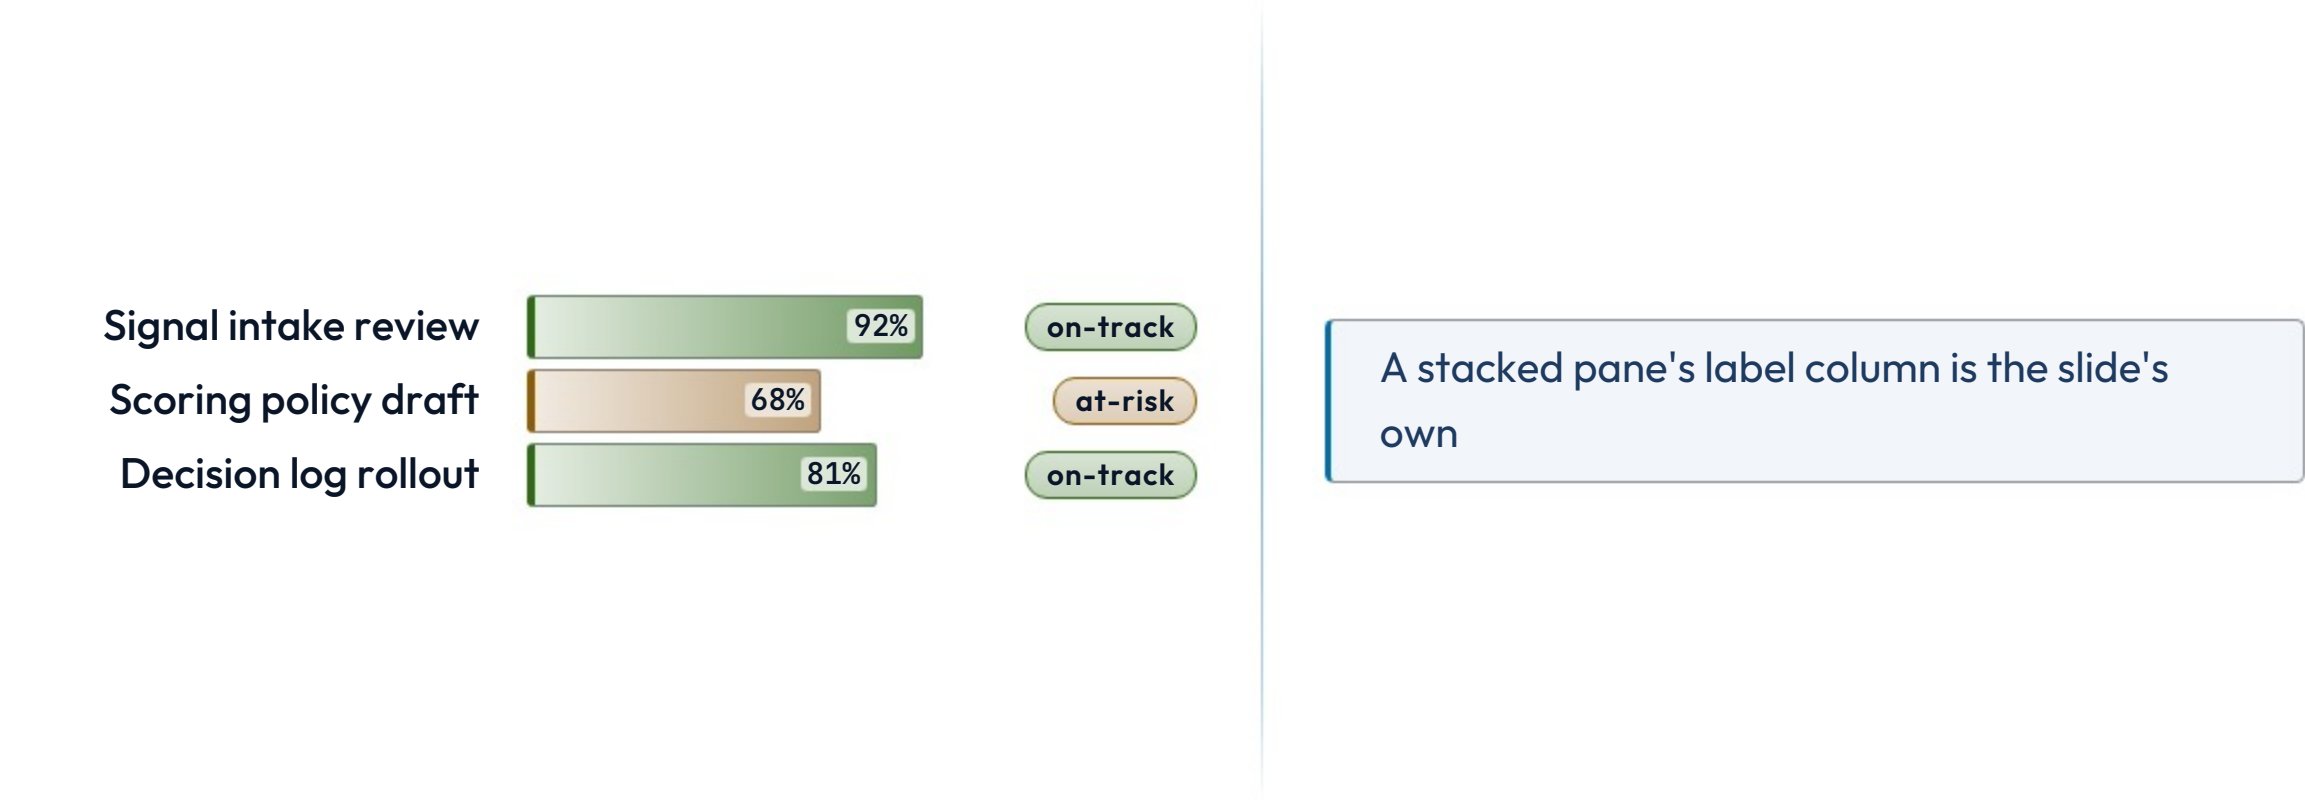

H1 2026 · A 35% PANE

A narrow pane gives each name its own row.

- A pane squarer than the slide sets the name above its bar
- The bar keeps the pane's full width

Stacked, the pane is slide-wide and nothing moves.

Each row name reads on one line, and so does each cell.

reachable not applicable				

- Each verb is a row the reader scans first
- A filled cell names the level it reaches

— Before: the row-name column was one fifth of the pane, and each name set one word per line.

On a slide, the grid is unchanged.
