

FIT LADDER • THE COVER-PAGINATE MOVE

Dense lists, split with a cover

A long register can't shrink to fit — so when it overflows, the engine leads with a cover, then flows the layout's own cards on. Same deck, just more of it.

What **cover-paginate** adds

- A dense list overflows? It can't drop a type size — readability is the floor
- So the engine **leads with an accent cover** — a heading, a semantic intro, a forward arrow
- Then it flows the layout's **own native cards** on clean pages — never flattened to generic rows
- A small **progress rail** ties the run together — k-of-N, beside the page number
(`autosplit: on`)

What the board will press on.

The questions, answered →

What the board will press on.

01 Why not extend the current vendor one more year?

The renewal lands in Q3 and locks us in through 2028. Switching now costs a single quarter of migration; switching after renewal costs three.

02 What happens to the team mid-migration?

No headcount change. The same four engineers run both stacks through the eight-week overlap, then the legacy stack is decommissioned.

What the board will press on.

(cont.)

03 How confident are we in the savings?

The \$1.2M is contracted, not projected — the signed rate differential, before any usage growth.

04 What is the rollback plan if the cutover fails?

The legacy stack stays warm for the full overlap; a failed cutover reverts in under an hour with no data loss.

The terms, defined →

Glossary

C – S

TERM	DEFINITION
Consent	A freely given, specific, informed agreement to processing — pre-ticked boxes don't count.
Controller	The party that decides why and how personal data is processed, and carries the legal accountability for it.
DSAR	Data Subject Access Request — a person's demand to see, correct, or delete the data held on them, on a 45-day clock.
Legitimate interest	A lawful basis that balances the controller's purpose against the data subject's rights, no consent required.

Glossary

(cont.)

TERM	DEFINITION
PII	Personal information that identifies a person, now read broadly enough to cover device IDs, cookies, and IP addresses.
Processor	A party that processes data on the controller's instructions — a vendor, not the decision-maker.
Pseudonymisation	Replacing identifiers with tokens so data can't be tied to a person without separately held keys.
Special category	Sensitive data — health, biometrics, beliefs — carrying heightened processing conditions.
