

Paint a state machine without leaving the palette.

Status words, a heavy main path, line patterns and palette slots — every one a word, and every one in the key.

The vocabulary

A status word or a slot `c1`...`c8` after a state; `=>` for the main path, `dashed` or `dotted` after a line's target.

PLAIN

The default reads as one system.

Every line takes the connector color; every state is a neutral tile.

The baseline the next slides paint – same machine.

THE MAIN PATH

A heavy arrow carries the happy path.

=> *for the path the machine is meant to take; the key names it.*

 On track  Happy path  Sent back

Same machine – a word on each line that carries meaning.

OUTCOMES

A status paints the tile.

The end states carry their outcome, and words that paint alike share one key entry.

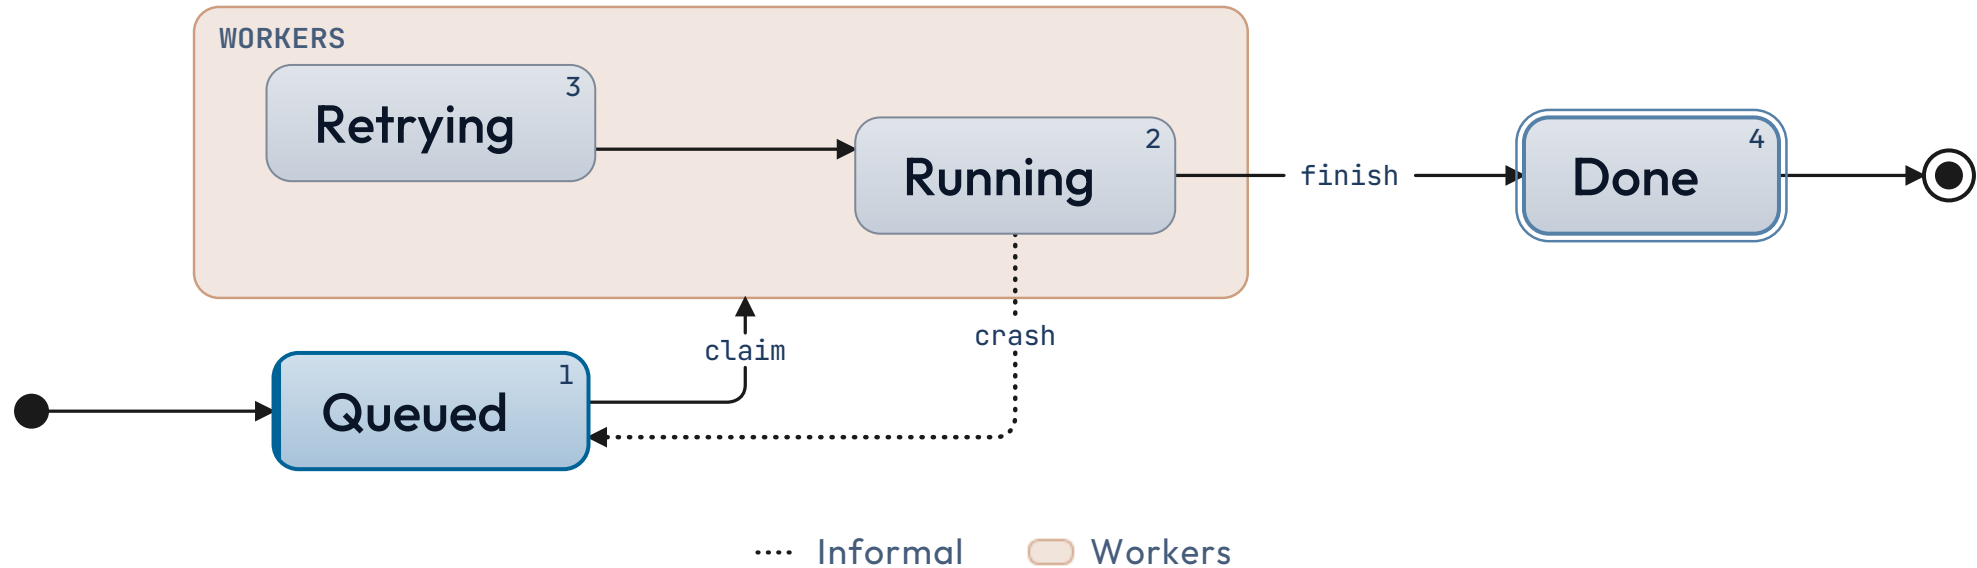

Done At risk Failing — Main path

SLOTS

A slot names a palette color, not a hue.

`c1` on a state, `c2` on a composite; the key shows a composite's slot by its name.

A slot re-themes with the palette: no color is written anywhere.
