

# One recipe for every card tag.

Numbers, slot labels, the verdict and the step label now share one kernel.

# Numbered cards carry a flush corner tag.

---

1

## Signal Intake

Weekly structured collection, normalized into one schema before scoring.

2

## Scoring Model

Each signal scored on confidence, recency and strategic relevance.

3

## Decision Log

Every decision recorded with the signals and criteria behind it.

4

## Calibration Loop

A monthly retrospective that adjusts the scoring weights.

# A numbered stack uses the same tag.

---

1

## **False signal amplification**

One loud voice dominating the decision. The model caps any source at 30%.

2

## **Signal hoarding**

Signals collected, decisions unlogged. Above P2, the log is required.

# A slot label that wraps still clears the card body.

---

## BUILD

Owens the scoring policy, the calibration loop and the pager.

## WHY NOT BUY FROM EITHER SHORTLISTED VENDOR

Neither exposes the calibration weights to the customer.

## WHY NOT DELAY

The competitive window closes in 18 months.

# The band placement spans the card.

---

## BUILD

Owns the scoring policy, the calibration loop and the pager.

## WHY NOT BUY

Neither vendor exposes the calibration weights.

## WHY NOT DELAY

The competitive window closes in 18 months.

## Before and after tags wear the accent.

---

### BEFORE

Every prioritization debate argued from first principles, average close four hours.

### AFTER

Decisions resolve against logged weights, average close 18 minutes.

DECISION REQUIRED

# Build the whole stack, or only the part that thinks?

Building is settled; the question is which layers earn our engineers.

BUILD EVERYTHING

- Owns the plumbing and the scoring alike
- Two engineer-quarters before the first score

BUY THE PLUMBING

- Connectors ship in six weeks
- Engineering stays on the scoring and the log

RECOMMENDATION

Buy the plumbing and build the scoring.

# The step label speaks in the same voice.

---

*Sketch roughens every tag.*

---

1

### **Intake**

Ranked list of the top signals.

2

### **Alerts**

Real-time flags past the threshold.

3

### **Index**

Source of truth for calibration.

4

### **Review**

A monthly look at the weights.
