

SLOT LABELS • LIB/CORE/SLOT-LABEL-LIFT.JS

A header is bold because the layout says so

`inventory` made its entry name out of markup the author typed: drop the asterisks and the name rendered as body prose. `redline` had the opposite problem — its label ate the sentence after it. Both now take a plain lead. And on `matrix-2x2`, typing the bold made the label *lighter*.

THE MEASUREMENT

Typing the bold was never optional.

Counting `<strong>` elements said four components depended on typed bold.

Measuring the rendered weight said one did. On `matrix-2x2` and `verdict-grid` the card `li` is already `font-weight:700`, so the label was bold from the layout all along — the element was inert on one and, on the other, one step lighter than no element at all.

The name is plain text; the layout sets it.

01 Signal Intake

Weekly collection across conversations and market data.

02 Scoring Model

Scored on confidence, recency, and relevance.

03 Decision Log

Every call recorded with the signals behind it.

04 Calibration Loop

Outcomes compared to predictions each cycle.

The lift wraps the lead; the CSS was always ready for it.

NO DECK BREAKS

The retired shape still renders, so nothing had to be rewritten to keep working.

Every path skips a row whose lead is already a `<strong>`, so a deck still written the old way — `- **Signal Intake.** Weekly collection...` — produces the same markup it always did. `lint:deck` warns and offers the autofix; it does not refuse the deck. Our own 86 rows moved because `inventory` and `redline` need the nested shape to bound the label, not as a style sweep.

The one visible fix: a label that ate its sentence.

Cal. Civ. Code §1798.135 · amendment SB-362 (2024)

A business that ~~collects~~ collects, sells, or shares consumers' personal information shall provide ~~two or more~~ at least one designated method for submitting requests to opt-out.

Why this matters

Sale and sharing collapse into one duty, and the homepage link title is now fixed — chrome and DSAR workflows both need the uniform wording.

Where each option lives.

High value · Low cost Ship this quarter Two named owners	High value · High cost Fund the strategic bet
Low value · Low cost Absorb into existing work	Low value · High cost Decline, and say why

Which option meets the criteria.

Rewrite the transform

 Correct  Cheap  Reversible

Right answer, wrong quarter — the cost lands on everyone.

Patch the call site

 Cheap  Reversible  Correct

Buys a quarter and leaves the defect where it is.

Register the layout

 Correct  Cheap  Reversible

One line in the shared kernel; the old decks keep rendering.

INLINE EMPHASIS IS STILL YOURS

Bold in a sentence is decoration; bold as a header was a declaration

***Reach** is the other axis is emphasis and
always was. What changed is that no layout
now needs you to type its header for it.*
