

INVENTORY · LEDGER · STRUCTURE

actors

Roster of responsibilities owned by named actors.

The actors ledger names who owns what.

Owns one row

A verb-first responsibility, twelve words at most.

Each actor

Reads top to bottom

Order carries seniority or sequence.

The ledger

Answers by name

The inline code names the seat.

The role chip

Stops at six rows

Past six, reach for list-tabular.

This layout

Seven rows is where the ledger maxes out.

Row one

First seat

Even at the ceiling, every row keeps a verb-first responsibility line.

Row two

Second seat

Eighteen words is the hard budget; this row spends most of them deliberately.

Row three

Third seat

Rows stay parallel or the column of chips stops lining up.

Row four

Fourth seat

Middle rows read fastest; bury nothing important here.

Row five

Fifth seat

The eye is tiring by now — keep these short.

Row six

Sixth seat

The soft ceiling was one row ago.

Row seven

Last seat

The hard stop; an eighth row means a second slide.

The actors ledger names who owns what.

Owns one row

A verb-first responsibility, twelve words at most.

Each actor

Reads top to bottom

Order carries seniority or sequence.

The role chip

Stops at six rows

Past six, reach for list-tabular.

This layout

When NOT to reach for actors.

Process sequence. If the rows describe stages in order, use list-steps or process-flow. actors is for parallel ownership, not handoff sequence.

Long per-actor prose. More than one sentence per row crowds the ledger. Move the detail to a dedicated slide and keep actors as the index.

Roles without names. If the labels are job titles in the abstract ("the engineer"), reach for cards-stack or list. The actors layout earns its weight when the names are named.

RELATED COMPONENTS

See also.

`list-tabular` — rows are reference entries, not owners

`cards-stack` — each item needs two sentences of body text

`list` — declared statements — the `principles` variant

`glossary` — the left column is a term, not an actor
