ENGINE · #1722 + #1717

The contrast floor, and what "dimmed" should mean

Two fixes that turn out to be one: how the gate measures text size, and how a slide de-emphasizes the thing it is not pointing at

THE UNIT BUG

One token, two thresholds — decided by the front matter.

01	on an deck	Resolves to 21.4px — 16.03pt	NORMAL TEXT · OWES 4.5:1
02	on a deck	Resolves to 64.1px — still 16.03pt	GRADED AS LARGE TEXT · FS-BOUND ONLY 3:1
03	One gallery, both sizes	317 runs passed as 4k, failed as hd	ONLY `size:` CHANGED

So the gate stopped grading on size. One floor, 4.5:1, applied to every run.

What this deck covers, in order.

01 The unit bug — page 2

→ **The agenda wash — page 3**

03 The other two instances — page 5

04 What is still owed — page 7

Past sections tick off; the current one keeps the arrow.

- [x] Measure the rendered deck, not the token table
- [x] Decide the floor before fixing to it
- [→] **Replace the wash with an ink**
- [ ] Log what the fix cannot reach

BOARD · THE DE-EMPHASIS BACKLOG

Done recedes by ink and elevation, not by fading.

BACKLOG	IN PROGRESS	REVIEW	DONE
Palette tune, `--fail` pair	Deck-scale threshold `in-progress`	Exempt-tier ceiling `review`	Agenda row + counter `done`
			Kanban done column `done`
			Losing compare card `done`

DECISION · OPACITY VS INK

The losing card recedes, and its label stays readable.

~~DIM WITH OPACITY~~

Composites ink and backdrop together, so it weakens each ink by the headroom it had. The element with the least headroom is rarely the one you were watching.

DECISION

DIM WITH AN INK

The palette already names a de-emphasis role, and a role token is scheme-aware for free. Markers and status keep full strength.

Still struck. Only the wash that took its label to 3.24:1 is gone.

MEASURED ON THE RENDERED GALLERY

The biggest, boldest element on the row was the illegible one.

01	**Agenda row title**	`--text-heading`, 18.13:1 undimmed	THROUGH THE WASH — 2.97:1
02	**Agenda counter**	`--accent`, 5.47:1 undimmed — larger and bolder	THROUGH THE WASH — 2.00:1
03	**Kanban inline token**	5.00:1 undimmed	THROUGH THE WASH — 2.12:1

When the largest thing on a row is the least legible, the instrument is wrong.

WHAT IS STILL OWED

One entry left in the ledger, and it is a palette question.

`redline`'s struck clause measures 4.25:1 on the dark canvas. It carries no wash to remove — its ink is `--fail` on a 10% tint of `--fail` — so closing it means tuning a token pair across 32 palettes. Logged with an exact count rather than swept into this change.
