ENGINE · BASE.MODIFIERS.CSS

The dark deck stopped repainting its own frames

Nine of them lost the canvas they paint for themselves, because the deck-wide one was declared later and won.

SECTION 01

The anchors get their accent panel back.

SECTION 01 · DARK CANVAS

The covers

An accent cover under dark had kept its accent ink and lost its accent ground.

DECISION · DARK CANVAS

A frame keeps the canvas it paints.

The reasoning →

A frame keeps the canvas it paints.

Keying on sovereignty

Ten frames are sovereign, four of them paint. The list would miss all five covers.

Keying on the painted surface →

A frame keeps the canvas it paints.

Keying on the painted surface

A frame painting something other than the deck ground keeps it. One painting `var(--bg)` loses nothing.

MEASURED

What the covers looked like before

The supporting detail →

What the covers looked like before

On main

`decision-cover` kept its accent ink and lost its accent ground: 1.52:1 in Chromium.

On this branch →

What the covers looked like before

On this branch

The same slide keeps its ground, and the same ink reads 6.10:1.

SECTION 02 · TOPIC

Topic joins the list

A topic slide paints an inverse panel in every mode, and had never been named in the finish file at all.

THE PRINT FACE IS IN EXAMPLES/FINISH-CANVAS-PRINT-FACE.MD

SECTION 02

The panel survives, even when the rail is switched off.

The list cannot rot — a gate reads the stylesheets and fails if it drifts.
