MARKER CORNER · STAMP, LOGO, AND ONE CAPSULE AT THE FOOT

The corner held four things. Now it holds two, and the markers are one.

Four absolutely-positioned boxes wanted the slide's top-right, and the arithmetic that kept them apart shipped wrong five times. This deck renders the answer: the two transient claimants left, then merged.

THE OCCUPANTS

Two are permanent. Two were passing through.

- The status stamp
  - Paints on the section's own `::before`, flush to the corner. It ships in the export.
- The deck logo
  - The author's mark, at the frame inset. Its geometry belongs to them.
- The clip marker
  - Drawn because a slide is broken. It leaves when the slide is fixed.
- The type-floor marker
  - The second segment of the same capsule. Author-only.

The first two keep the corner. The last two are one pill at the foot.

CONFIDENTIAL

Quarterly program review for the regional distribution network and its downstream partners across four operating

Throughput

Median order-to-dock time fell from 41 hours to 26 hours.

Cost

Unit handling cost is down 12% year over year.

WHY MERGING ENDED IT

MARKER CORNER · FOUR CLAIMANTS, ONE CAPSULE

Five fixes asked how far the marker should drop. The sixth stopped asking.

Each earlier answer was arithmetic: 21 stamp class names pushed a fixed row when the shapes sat at three different heights; a unitless `calc()` that discarded the whole transform and put both pills back in one band; a logo reserve that landed a pill inside the mark it was written to clear.

Two segments in one flex row cannot collide with each other, and a single centered box has one neighbor set to clear instead of four. So the reserves are deleted rather than re-derived.

THE WHOLE STAMP VOCABULARY

MARKER CORNER · FOUR CLAIMANTS, ONE CAPSULE

Thirteen shapes, and none of them has to be cleared.

- Anchored right
  - `tab`, `flag` and `pin` at the corner; six more sit lower. All of them top.
- Full width
  - `notch` is a hairline band across the top edge. Also top.
- Full bleed
  - `mark` and `veil` cover the capsule on purpose, from the plane above.

A stamp paints along the top. The capsule berths at the foot. There is nothing left to reserve.

ONE CAPSULE · NO RESERVES

One object, up to two facts, and no arithmetic holding it together.

The clip fact reads first because it is the more severe one; the type floor follows in amber. Hide either and the survivor is a correctly-rounded pill, because the rail carries the radius and clips its children — the degradation costs no rule at all.
