TABLES · THE OUTER BOTTOM EDGE

The last row draws no rule

A table's row hairlines separate **rows**. Under the final row there is no next row to separate — only the slide's own chrome, which already draws a boundary. Every slide here carries a below-note, so you can see where the two used to collide.

Where the collision was

TABLE OUTER EDGE · THE LAST ROW DRAWS NO RULE

A `td` hairline between rows is a separator. The same hairline under the last row is the table's outer edge, and the stage puts its own rule right below it.

SURFACE	RULE UNDERNEATH	WAS	NOW
obligation-matrix	below-note hairline	25.0px	133.7px
statute-stack lane	below-note hairline	25.5px	135.2px
`table` at `table-fill`	below-note hairline	25.5px	133.5px
plain table, filling the stage	below-note hairline	25.5px	133.5px

Measured in Chromium at design size. Two rules that close with nothing between them read as one thick line.

A comparison table ends on its last row.

TABLE OUTER EDGE · THE LAST ROW DRAWS NO RULE

CRITERION	SPREADSHEET	VENDOR NORTH	IN-HOUSE BUILD
Speed	Already open	3–4 weeks	Same quarter
Auditability	Weak	Strong	Strong
Calibration	None	Vendor-set	Ours to tune
Running cost	Lowest	Per seat	Staff time

`table-fill` makes the table take the whole stage, so its last row sits closest to this note — the case the change was made for. (The default hugs its rows and centers, which moves the last row away from the note and out of the collision.)

Obligations cross-tab the same way.

TABLE OUTER EDGE · THE LAST ROW DRAWS NO RULE

REGULATION	NOTICE	CONSENT	RETENTION	BREACH
CCPA	✓	−	✓	✓
GDPR	✓	✓	✓	✓
LGPD	○	✓	−	✓

✓ Applies − Partial ○ Undetermined

State discs still decode from the `[x]` `[-]` `[ ]` markers; only the closing hairline is gone.

lane runs the stack in one column.

TABLE OUTER EDGE · THE LAST ROW DRAWS NO RULE

JURISDICTION	CITATION	HEADLINE OBLIGATION	STATUS
FEDERAL	15 U.S.C. §6501	Parental consent <13 data	In effect
STATE	Cal. Civ. Code §1798	Notice + opt-out + DSAR	Enforced
LOCAL	NYC §22-1201	Annual AEDT bias audit	Effective

Cited as of the last review; check the register before relying on any row.

A plain pipe table gets the same treatment.

TABLE OUTER EDGE · THE LAST ROW DRAWS NO RULE

REGION	Q3 REVENUE	Q4 REVENUE	CHANGE
North America	$4.2M	$5.1M	+21%
EMEA	$3.8M	$3.9M	+3%
APAC	$1.9M	$2.6M	+37%

No class needed — the universal table treatment carries it. The zebra falls on odd rows, so it closes this three-row table; with an even count the last row simply ends in white, which is the intent.

Who was already there, and who is exempt.

TABLE OUTER EDGE · THE LAST ROW DRAWS NO RULE

COMPONENT	WHY IT IS NOT IN THE DIFF
glossary	Already sets `border-bottom: none` on its cells — never had the collision.
math.derivation	Already clears its last row — the same fix, reached independently.
roadmap	Exempt: its cell border is grid structure, so clearing it opens the grid.
obligation-matrix `heat`	Exempt: the last row's border closes a 6px double bracket rail.
obligation-matrix `asymmetric`	Exempt: each cell is a card box, not a ruled row.

The test is whether a cell's bottom border is a **separator** or **structure**. Only separators go.

Want the table bounded top and bottom?

TABLE OUTER EDGE · THE LAST ROW DRAWS NO RULE

Put the deck on `rule: none` in front matter, or one slide on `<!-- _class: no-heading-rule -->`. The masthead hairline steps aside, the table's own spectrum bar becomes its top edge, and the table reads as one closed object.

That keeps the composition an author's choice rather than something the engine infers from the presence of a table.
