COMPARISON · GRID · STRUCTURE

verdict-grid

Options scored against criteria as a verdict matrix.

The grid scores options against shared criteria.

Option one.

Criterion Criterion

Why the checks land this way.

Option two.

Criterion Criterion

Unknown is not a no.

Option three.

Criterion Criterion

The sweep is the verdict. Recommended.

Five options is the verdict grid's ceiling.

First.

Check Check

Early cards set the criteria order.

Second.

Check Check

Partial marks keep the grid honest.

Third.

Check Check

The middle card is read most carefully.

Fourth.

Check Check

Late cards inherit the reader's fatigue.

Fifth.

Check Check

The hard stop; six wants table.

The grid scores options against shared criteria.

When NOT to reach for verdict-grid.

Exactly two options

Two options with shared criteria belong in `compare-prose` or `split-compare`. verdict-grid earns its layout at 3+ options.

No rationale line

Every option must end with a marker-less prose line — the verdict for that card. Omit it and the card renders empty below the criteria, and the focal last card has nothing to recommend. The rationale is required, not optional.

When NOT to reach for verdict-grid.

Criterion longer than two words

The text after the marker is a pill's label, not a sentence — two words at most (`Residency`, `Self-serve`). A sentence on a criterion line breaks the row scan; prose belongs only on the final rationale line.

Cards with different criteria

When each option needs its own criteria list, the comparison fails — use `cards-stack` so each card has full prose breathing room instead.
