IMAGERY · ![BG LEFT:40%]

A Marp ratio keeps the image panel

A deck brought in from Marp writes the split as `left:40%`. The image layout reads the side, keeps its panel, and resolves its own share.

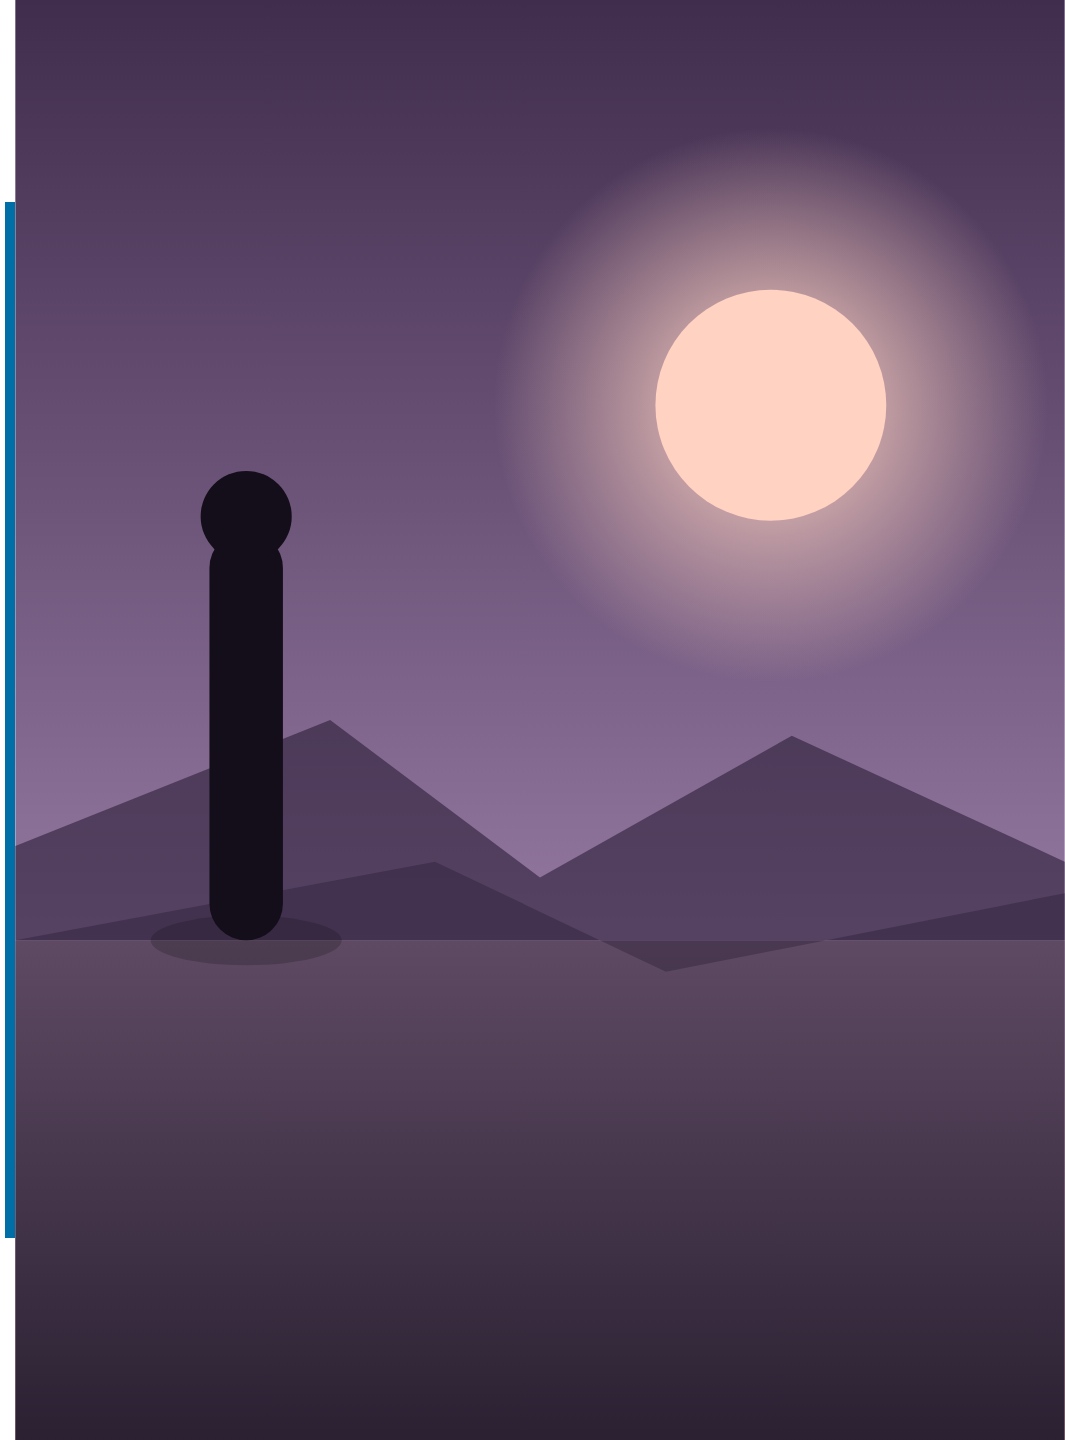

Panel on the left

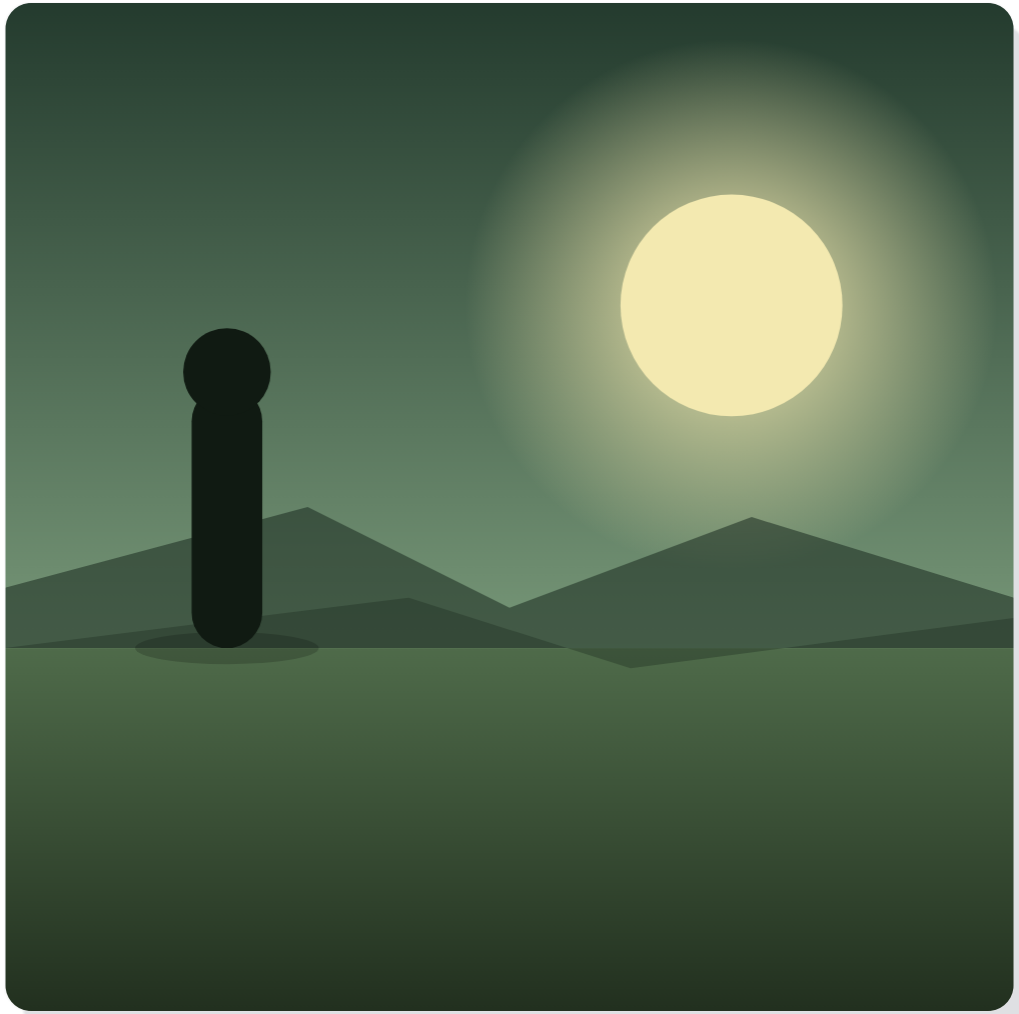

The deck says `![bg left:40%]`. The picture sits in the left panel; the share is the layout's own, chosen from the picture's shape.

Panel on the right

`![bg right:30%]` puts the panel on the right,

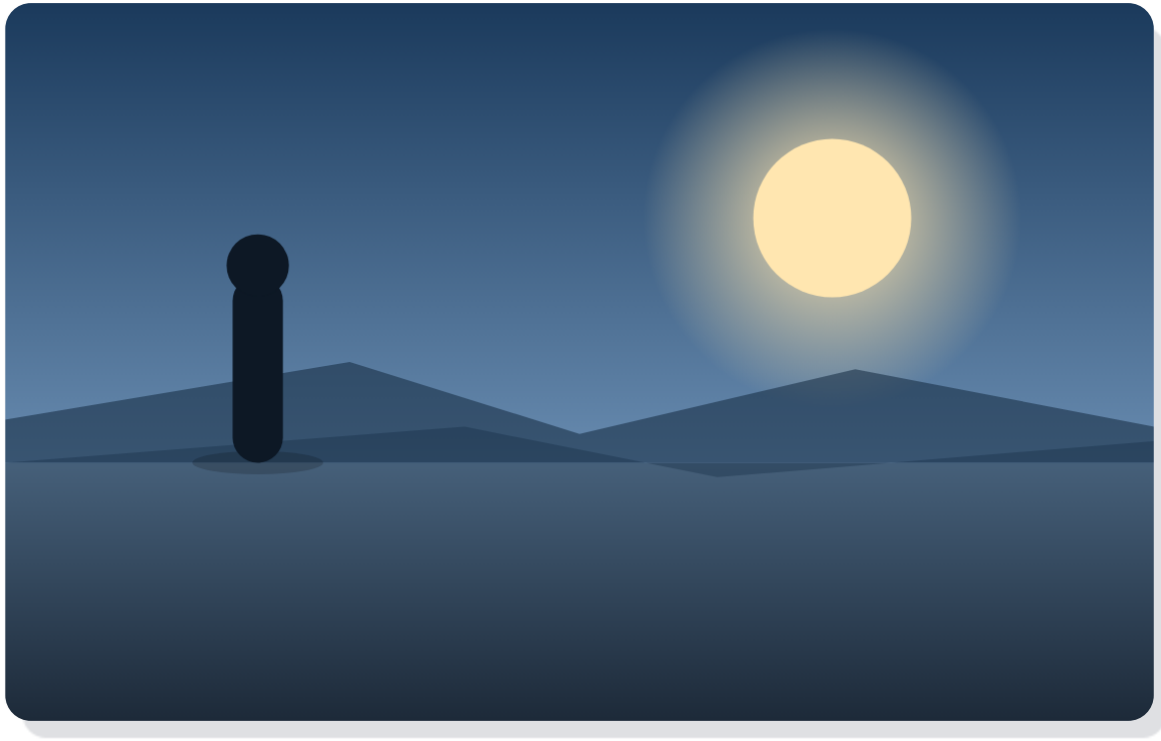

again at the layout's own share.

The plain spelling

`![bg left]` with no ratio draws the same panel. The ratio changes nothing but the lint note.

A modifier with a value rides along

`![bg left:40% blur:10px]` still reads its side.

A tall picture, on the right

`![bg right:60%]` asks for a wide panel; the layout still resolves its own share from the picture's shape.
