Feature demo · color-vision deficiency

Meaning that survives color blindness.

One theme — `theme: a11y-deuteranopia` — and the deck stops relying on hue alone. Status reads by shape, categories by texture.

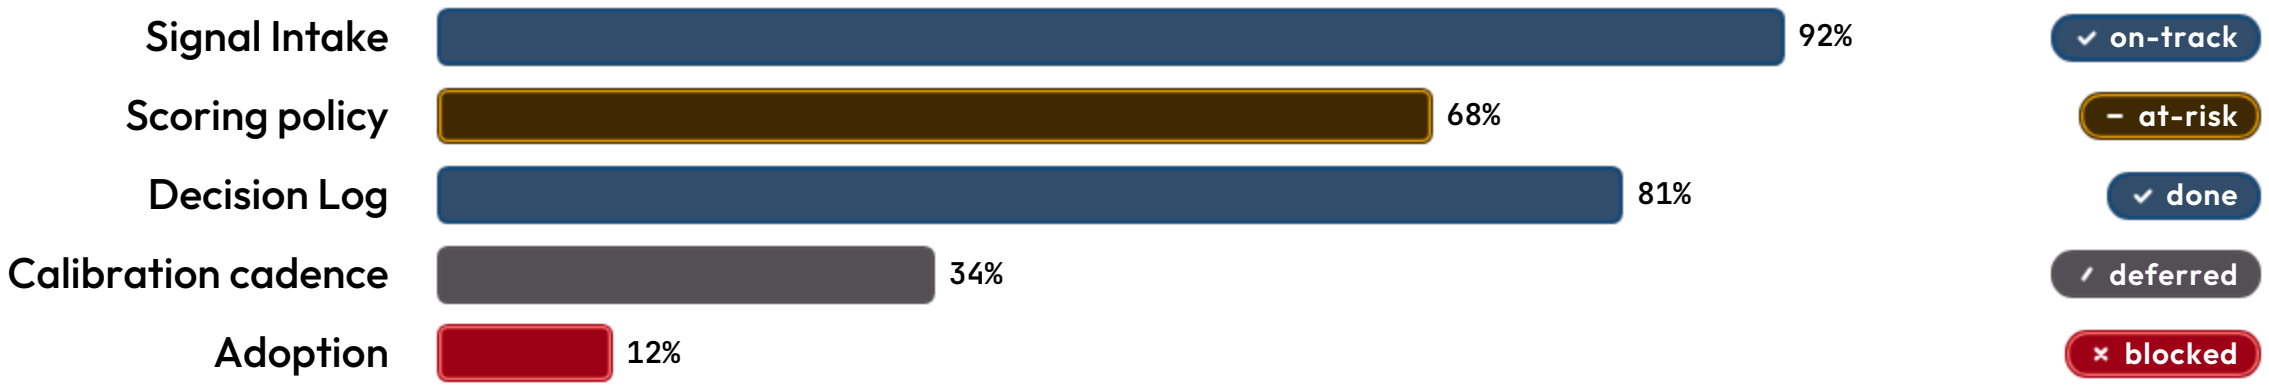

The problem

~8% of men can't separate your categories by color.

Under deuteranopia, red and green collapse; the pale categorical fills a deck leans on drop to one or two distinguishable colors. A palette can't fix that — the information has to ride a second channel.

Q3 · delivery

Status — color, glyph, and label.

Where the quarter went

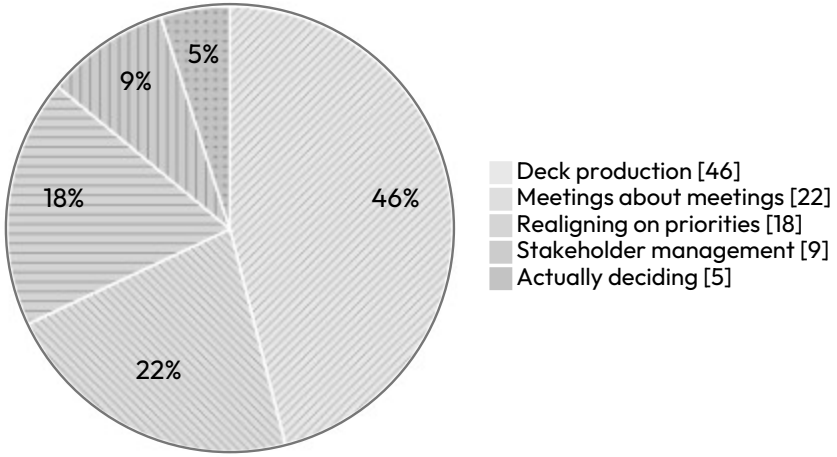

Wedges read by value and texture.

Deck production	**46%**
Meetings about meetings	**22%**
Realigning on priorities	**18%**
Stakeholder management	**9%**
Actually deciding	**5%**

The same data · Mermaid's own pie

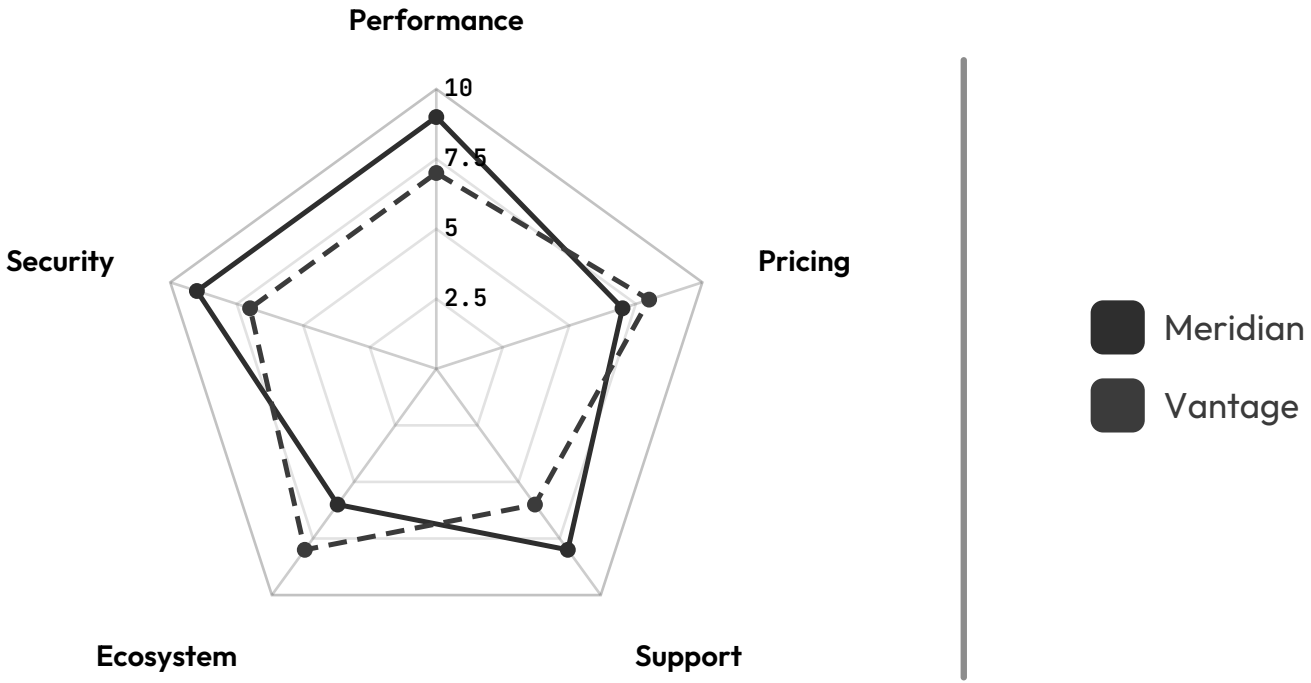

Diagrams texture too — not just native charts.

KEY INSIGHT

Each Mermaid slice carries the texture of its color slot, so the wedges stay separable when hue collapses — on screen and in black-and-white print.

Series read by line style.

Four types · one theme each

Deuteranopia · protanopia · tritanopia · achromatopsia.

Pick one in deck config (`theme: a11y-deuteranopia`) so it travels with the deck, or choose it from the Studio's theme picker — it's a theme.
