Finish axis · the accent sub-family

Accent finishes

Three baked-in details — the **spectrum** ribbon, the heading **rule**, and the **eyebrow** — are now first-class, selectable finishes. Pick one deck-wide or per slide; every value is palette-blind and defaults to today's render.

Spectrum · style

One selection sets the gradient

The `spectrum:` key picks the gradient identity — the ribbon on the **brand bar**.

The bar carries it; the in-content accents stay quiet.

- `on`
  - The default 3-stop rainbow ribbon (omit the key).
- `solid` / `duo` / `mono`
  - A single accent, a two-tone pair, or a quiet tint — this deck runs `duo`.
- `off`
  - Drops the section-edge bar entirely.

Spectrum · trim

Three tiers on the structure — quiet by default

By default the code strip, table rails, and rules stay a quiet accent-tint hairline — no rainbow repeated on every line. `spectrum-trim:` dials the presence up in three tiers; this slide runs `restrained`, so the panel strip below is a quiet single-hue ramp.

```
// spectrum-trim: off        gives a quiet accent-tint hairline (the default)
//                restrained gives a single-hue accent ramp (this slide)
//                on         flows the deck's full spectrum onto the structure
const tiers = ['off', 'restrained', 'on'];
```

Spectrum · placement

Move the bar to any edge

`spectrum-edge:` places the section-edge ribbon on the top (default), left, right, or bottom — this slide runs it on the **left**. Placement touches only the bar; the structural accents stay put.

Spectrum · placement

A bottom rail reads as a baseline

The same `spectrum-edge:` control on the **bottom** edge. Use `off` to drop the bar entirely while keeping the deck's other accents intact.

Heading rule · accent

The heading rule is its own finish

The `rule:` key controls the underline beneath a heading: `full`, `short`, an `accent`-colored segment (this slide), or `none`. A short accent rule gives a masthead a signature without shouting.

- Restrained by default
  - `auto` keeps today's full hairline where it already draws.
- Opt into a signature
  - `short` and `accent` are the expressive moves; `none` is the clean slate.

Eyebrow · dot

ACCENT FINISHES · SPECTRUM / RULE / EYEBROW

The eyebrow gets a finish

The `eyebrow:` key decorates the mono-caps kicker. This slide leads with a `dot`; `bar`, `arrow`, and `underline` are the other marks — all in the accent color, all tasteful.

› *Eyebrow · arrow*

ACCENT FINISHES · SPECTRUM / RULE / EYEBROW

Same label, a leading chevron

An `arrow` eyebrow points into the title. Pick one treatment deck-wide so every kicker reads as one family — never a ransom note of mixed marks.

Spectrum · cards

Opt a spectrum rail onto card surfaces

Deck-wide or per slide

`spectrum-card: auto` rails every card; `_class: spectrum-card` opts in one slide.

Follows the bar by default

`auto` inherits the deck's `duo` — no per-card edit.

Off by default

No card gets a rail unless you ask — restraint over a stripe on everything.

Palette-blind

The rail recolors with the theme and `dark` automatically.

Spectrum · cards

The rail tunes independently of the bar

Pin any variant

`spectrum-card: solid` here, while the bar stays `duo` — all variants are on-brand.

Its own placement

`spectrum-card-edge: top|right|bottom` moves the rail; `left` is the default.

Independent axes

Style and placement each override per slide without touching the deck bar.

Same restraint

One curated look per deck — the rail is a signature, not a stripe on everything.

Spectrum · cards

Rainbow rail, on top

A pinned rainbow

`spectrum-card: rainbow` shows the full theme ribbon even when the bar is quieter.

Moved to the top edge

`spectrum-card-edge: top` runs the rail across the card's head.

Boardroom-safe

Solid or two-tone fills — no rainbow-alpha hazard in the exported PDF.

Accent finishes

Deck-wide or per slide — palette-blind, export-safe

Set the feel once in front matter, override a single slide with a class, and every value recolors automatically with the theme.
