Lattice · component adaptive sizing

Adaptive by box, not by size.

The same five components, rendered on a 9:16 frame. Each reflows to the box it occupies — no size-specific variant was authored into the deck.

What "box-local" changes.

What "box-local" changes.

A component reads the box it sits in, not the size you selected.

continues →

What "box-local" changes.

(cont.)

Type stays anchored to the slide; only the structure reflows.

continues →

What "box-local" changes.

(cont.)

The trigger is the container's aspect, so a portrait deck and a narrow nested cell are handled by one rule.

Four families carry the structure →

What "box-local" changes.

(cont.)

Four families carry the structure: wide, square, tall, strip.

continues →

What "box-local" changes.

(cont.)

The author declares priority and what may drop; the layout honors it.

Where the next two quarters get spent.

Effort · Impact

Quadrant by quadrant →

Where the next two quarters get spent.

Effort · Impact

Migrate the data layer

High impact, low effort — start now.

Option 1 of 4

Where the next two quarters get spent. (cont.)

Effort · Impact

Rebuild the editor

High impact, high effort — staff in Q1.

Option 2 of 4

Where the next two quarters get spent. (cont.)

Effort · Impact

Rename the workspace

Low impact, low effort — defer.

Option 3 of 4

Where the next two quarters get spent. (cont.)

Effort · Impact

Re-platform billing

Low impact, high effort — do not start.

Option 4 of 4

Four pilots, four lessons.

Onboarding →

Four pilots, four lessons.

Onboarding.

Teams that finished setup in one sitting retained at twice the rate.

Scoring →

Four pilots, four lessons.

(cont.)

Scoring.

The default weights were re-tuned by almost every team within a month.

Logging →

Four pilots, four lessons.

(cont.)

Logging.

Predicted-outcome fields stayed blank until we made them one tap.

Review →

Four pilots, four lessons.

(cont.)

Review.

Weekly log review was the single strongest signal of a healthy pilot.

DECISION REQUIRED

Build the data layer, or buy it?

Both paths are viable. The difference is where we spend the next eighteen months.

The choice →

DECISION REQUIRED

Build the data layer, or buy it?

BUILD IN-HOUSE

- Full control over schema and roadmap
- 2–3 engineer-quarters to feature parity

Option 1 of 2

DECISION REQUIRED

Build the data layer, or buy it?

BUY + CONFIGURE

- Ship in six weeks, not nine months
- Exit risk manageable — data export contractually guaranteed

the key insight →

Build the data layer, or buy it?

KEY INSIGHT

Buy the infrastructure. Build the differentiation. Revisit in twenty-four months.

How the reflow decides.

How the reflow decides.

01 Measure the box the component occupies, not the deck.

continues →

How the reflow decides. (cont.)

02 Pick the family from the box's aspect ratio.

continues →

How the reflow decides. (cont.)

03 Keep type anchored to the slide; reflow only the structure.

continues →

How the reflow decides. (cont.)

04 Shed the lowest-priority parts last, only when the box is tightest.

One contract, every frame.

engineering/decisions/2026-06-18-component-adaptive-sizing.md

Nothing on these slides selected a size.

The components did.
