backdrop: 60 clear · deck-wide

Restrain any finish

The atrium finish at 60%, cleared behind the words, on a dark bookend.

Deck-wide

One line tames the whole deck.

`backdrop: 60 clear` dims atrium to 60% and clears it from behind the content on every slide. Atrium is built in, so until now it had no restraint control.

The finish still frames the slide at the margins.

backdrop-full backdrop-open

For contrast: atrium at full strength.

This slide opts out of both deck values: full strength, no mask. The glow and grid sit right behind the text, which is the problem the register exists to solve.

no-finish

An opted-out slide stays clean.

backdrop-full · deck mask kept

A slide overrides one axis at a time.

This slide sets only its strength. It keeps the deck's `clear`, so atrium returns at full strength yet still steps back behind the words.

backdrop-spot-tr

Or show the finish in a single window.

`spot-tr` reveals atrium in the top-right corner and hides it everywhere else. Nine anchors cover the slide, from `spot-tl` to `spot-br`.

finish-graph · backdrop-40 backdrop-spot-bl

Both axes compose on one slide.

The graph grid at 40%, shown only in the bottom-left corner. The words sit on clean canvas.

finish-graph · backdrop-full backdrop-open

A fabricated finish bakes its own mask.

The **graph** finish bakes 60% strength and a clearance. Here `backdrop-full backdrop-open` discards both, and the grid runs right through the text.

finish-graph · backdrop-spot-c

A mask keeps the finish's own dim.

Graph bakes 60% strength and a clearance. `spot-c` swaps only the mask for a centered window and keeps the baked 60%.

backdrop: 20–80 · clear · spot- · open · full*

Any finish, any slide.

Restraint for built-in and fabricated finishes, deck-wide or per slide.
