Fix · Slide backgrounds

A background on any slide

Add `bleed` to the slide, and its one picture fills it

Full-bleed background

The photo is the slide's background.

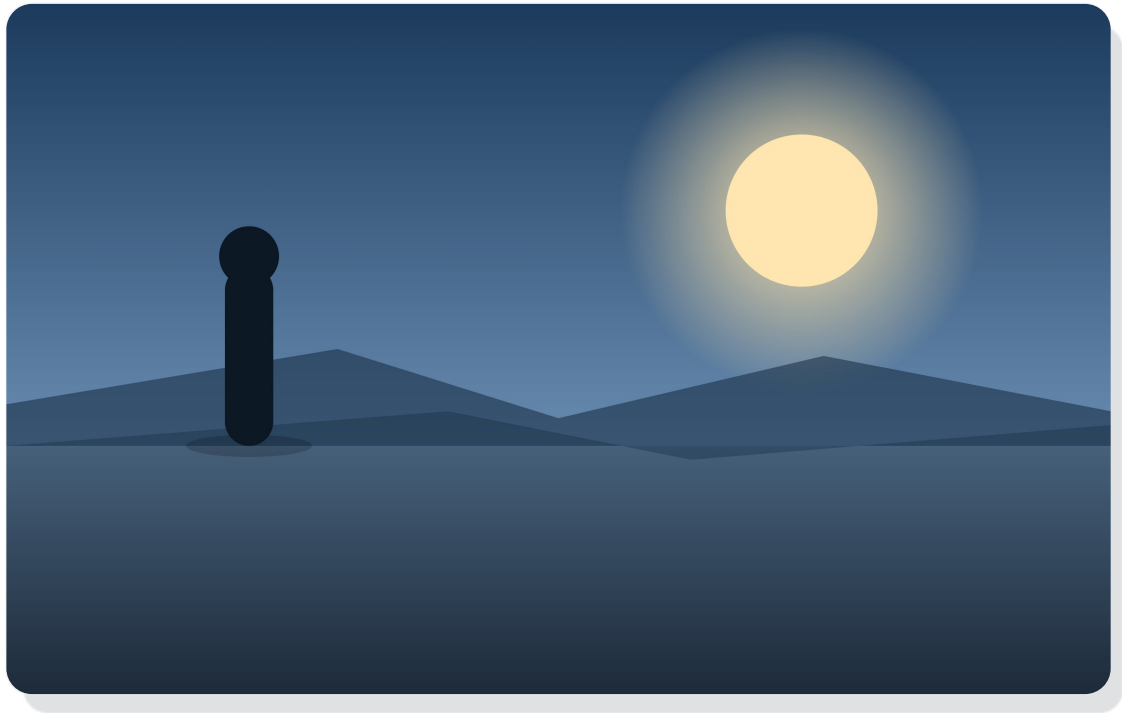

Any picture

It covers the canvas, centered.

Beside the text, use the image layout.

On an `image` slide the same picture sits next to the words; `image mirror` puts it on the left.

Same in every export

Every export agrees.

One renderer, one answer

A background is a background.

Write `![A name](photo.jpg)` and give the slide `bleed`, or `image` to set it beside the text.
