Palette · categorical order, light fills, status pair

Carbone, on par

The same hues in a different order, so a chart reads as several colors instead of three greens.

Chart cycle · most-distinct-first

Three series now read as green, blue and orange, not three greens.

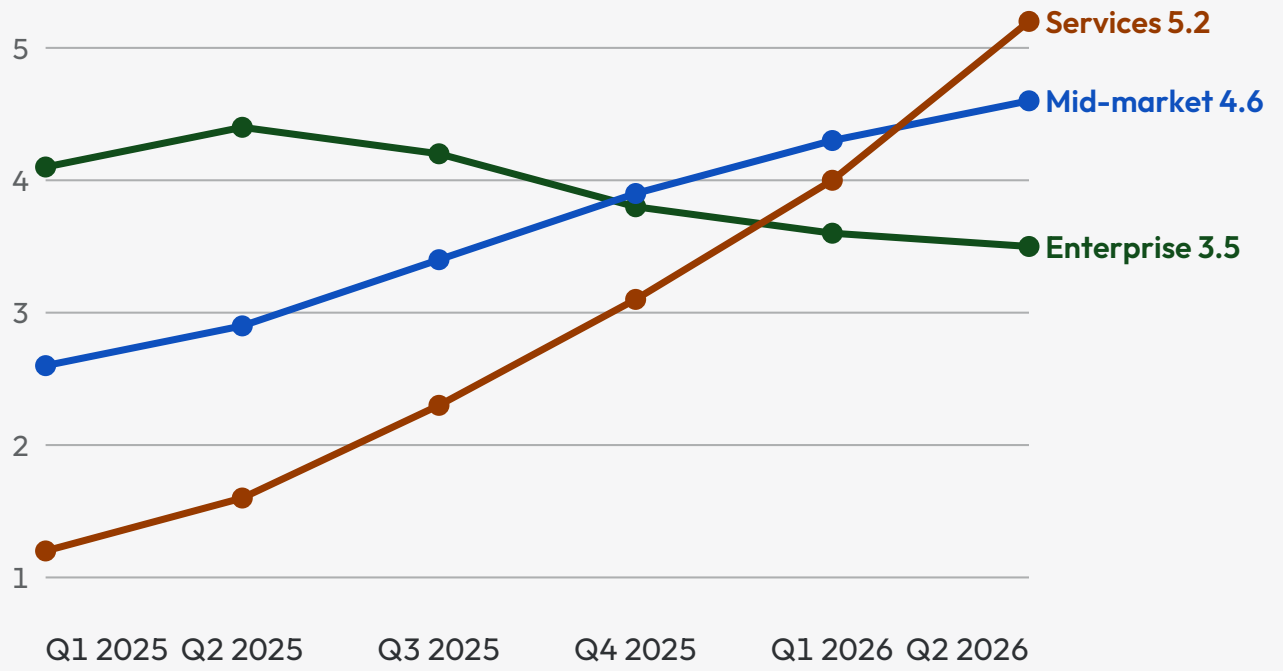

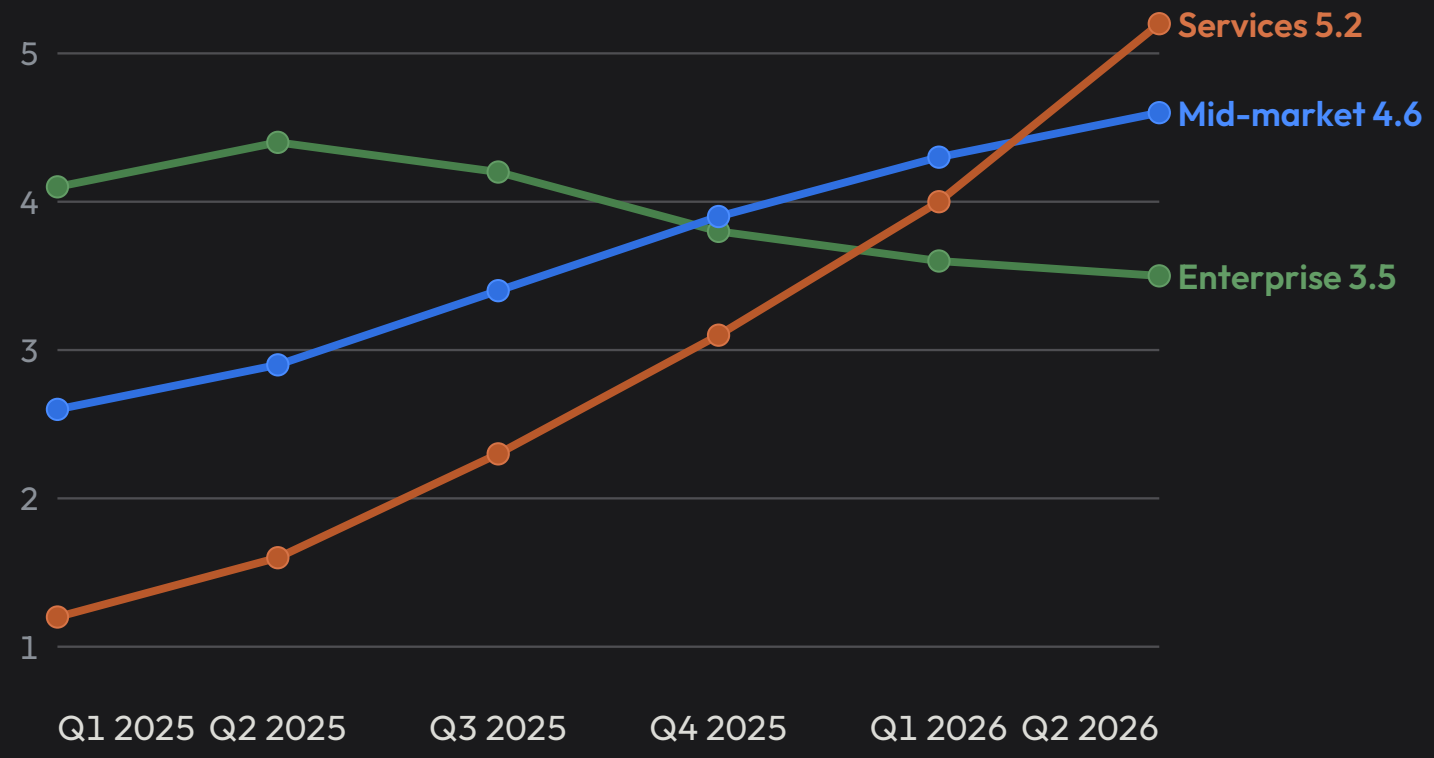

Chart cycle · the graphite face

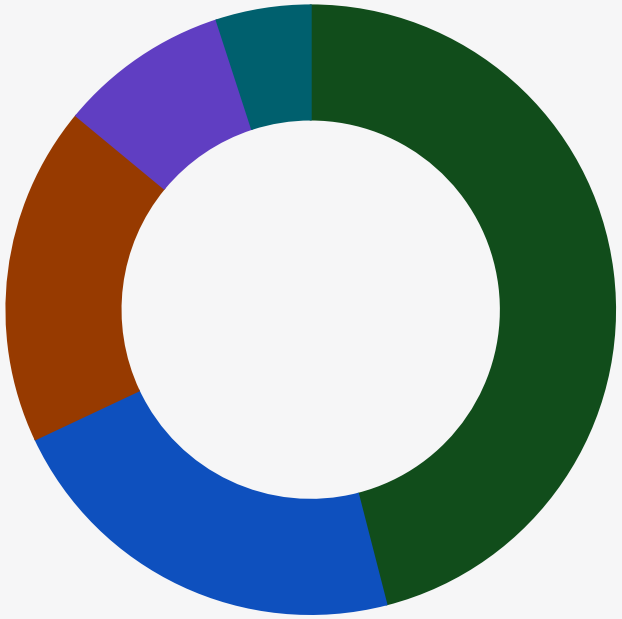

The dark face keeps its vivid pigments, in the same new order.

H1 2026 · 1,840 person-hours

Five wedges, five colors a room can tell apart.

The closest neighbors in the cycle are now 0.198 apart in OKLab, up from 0.094.

Deck production	46%
Meetings about meetings	22%
Realigning on priorities	18%
Stakeholder management	9%
Actually deciding	5%

Revenue mix · FY23–FY25

Services carries the growth, and its band no longer blends into licenses.

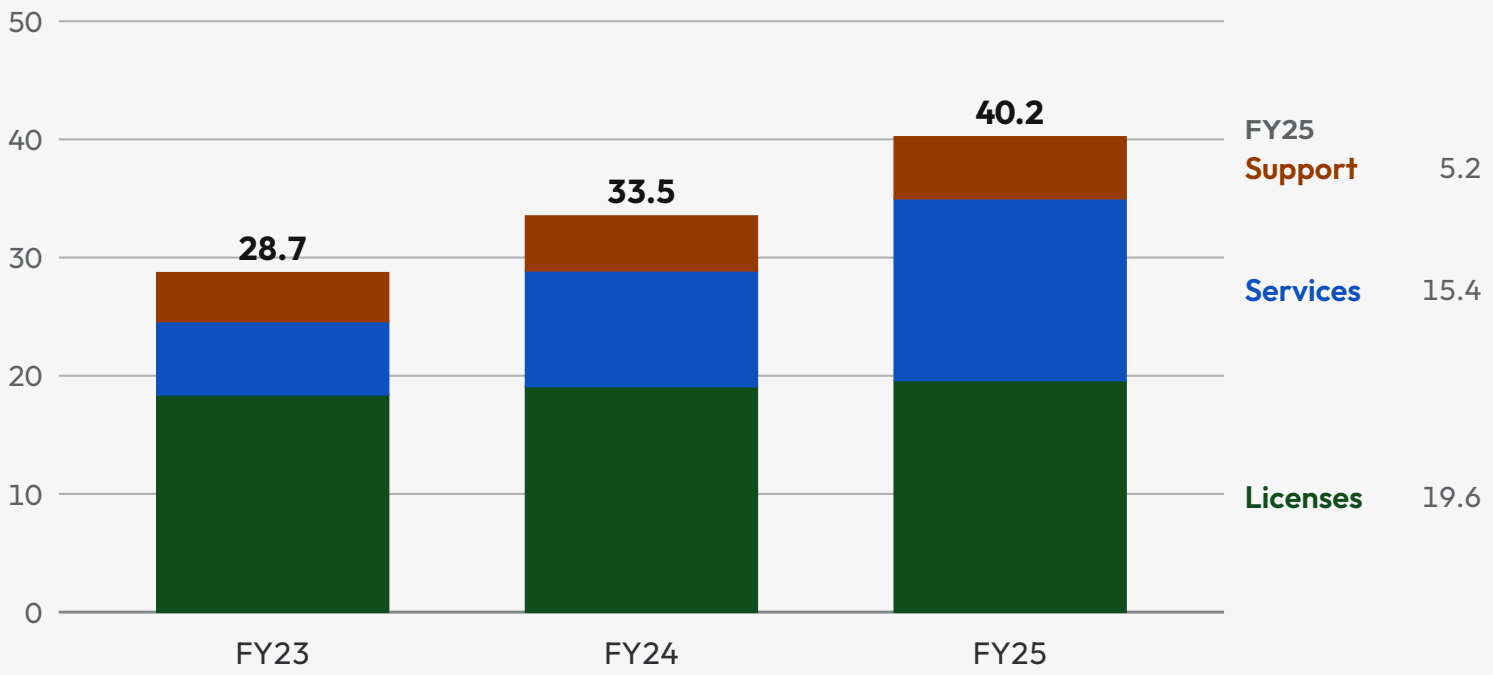

Chart cycle · stacked parts

Diagram cycle · visible fills

Each flowchart box is a tinted wash of its own hue.

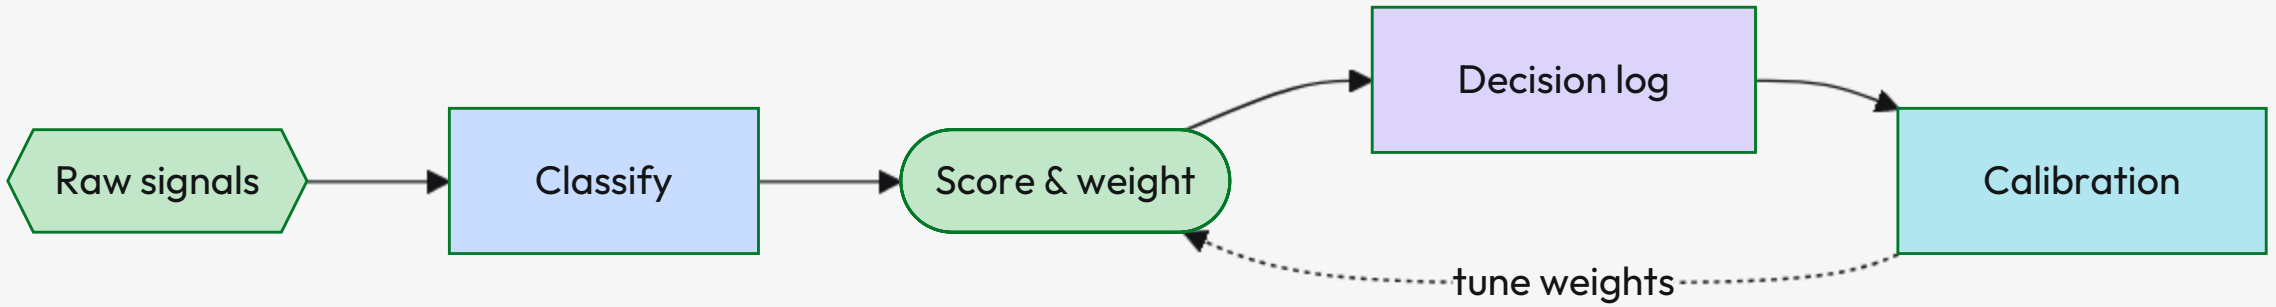

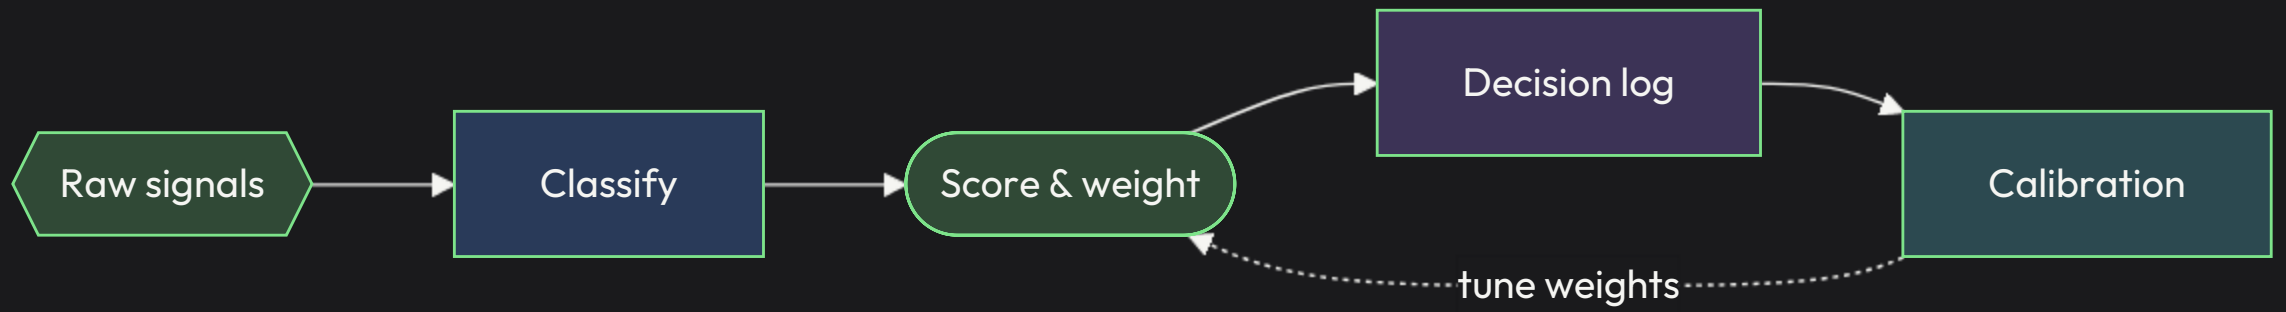

Diagram cycle · the graphite face

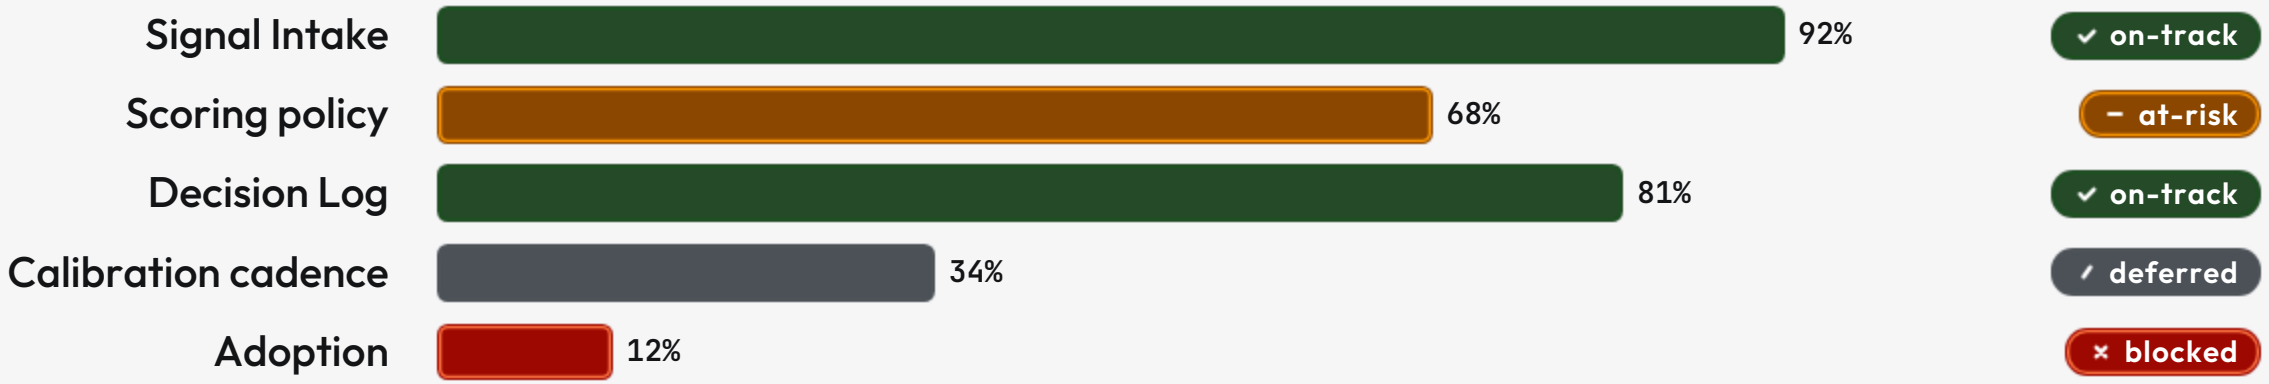

On graphite, each box is a deep fill under a bright edge.

H1 2026 · Phase 1 readiness

At-risk and blocked are two different colors now.

Warn moved to amber and fail to signal red; they were orange beside coral.

Carbone · both faces

Same hues, same lime, new order: carbone's charts now read like indaco's and cuoio's.
