A mistyped value no longer plots as a different number

`--5`, `(5` and `1,2,3` draw nothing and lint names them

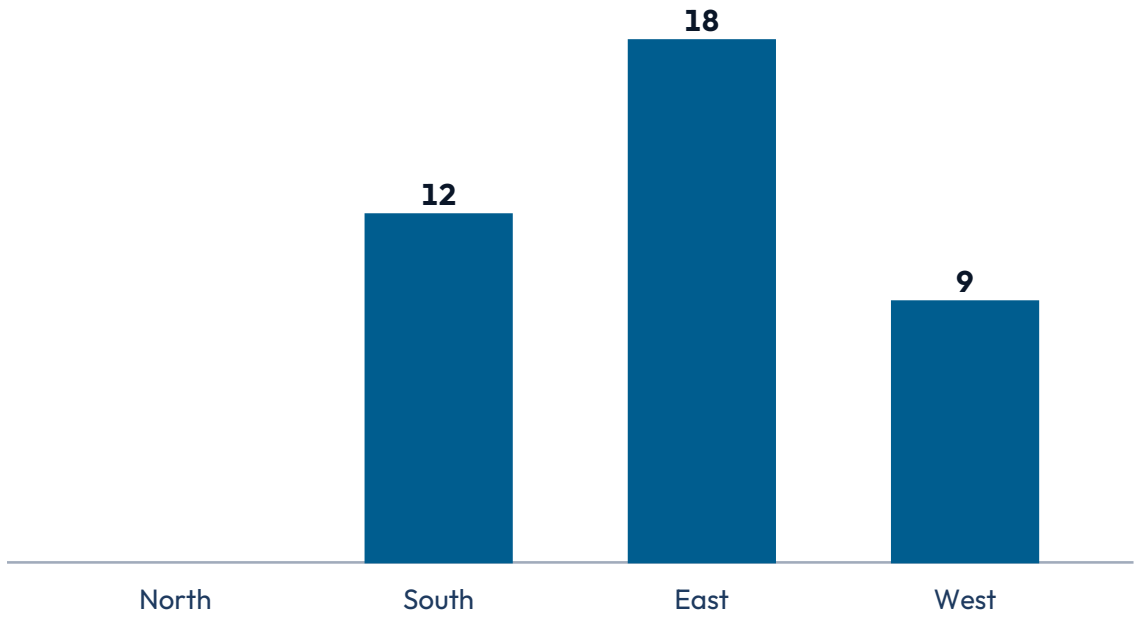

Variance to plan · $ thousand

Every well-formed spelling reads as it did before.

Headcount by region

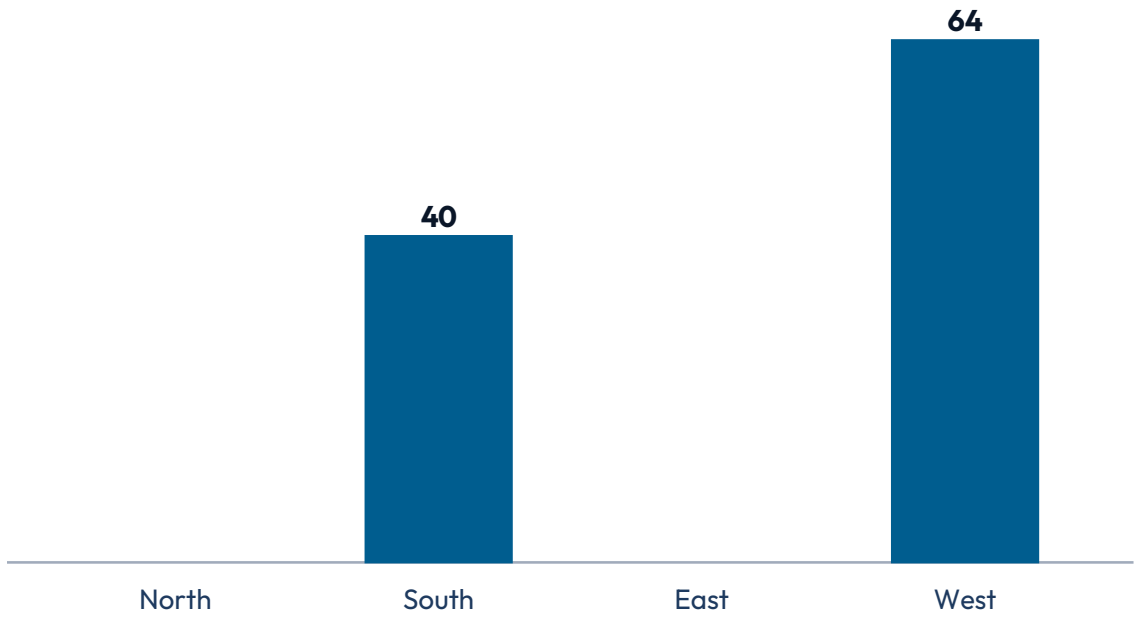

A doubled sign is no value, so its bar is not drawn.

Before, North drew a bar at -5, and the narration said "down negative five".

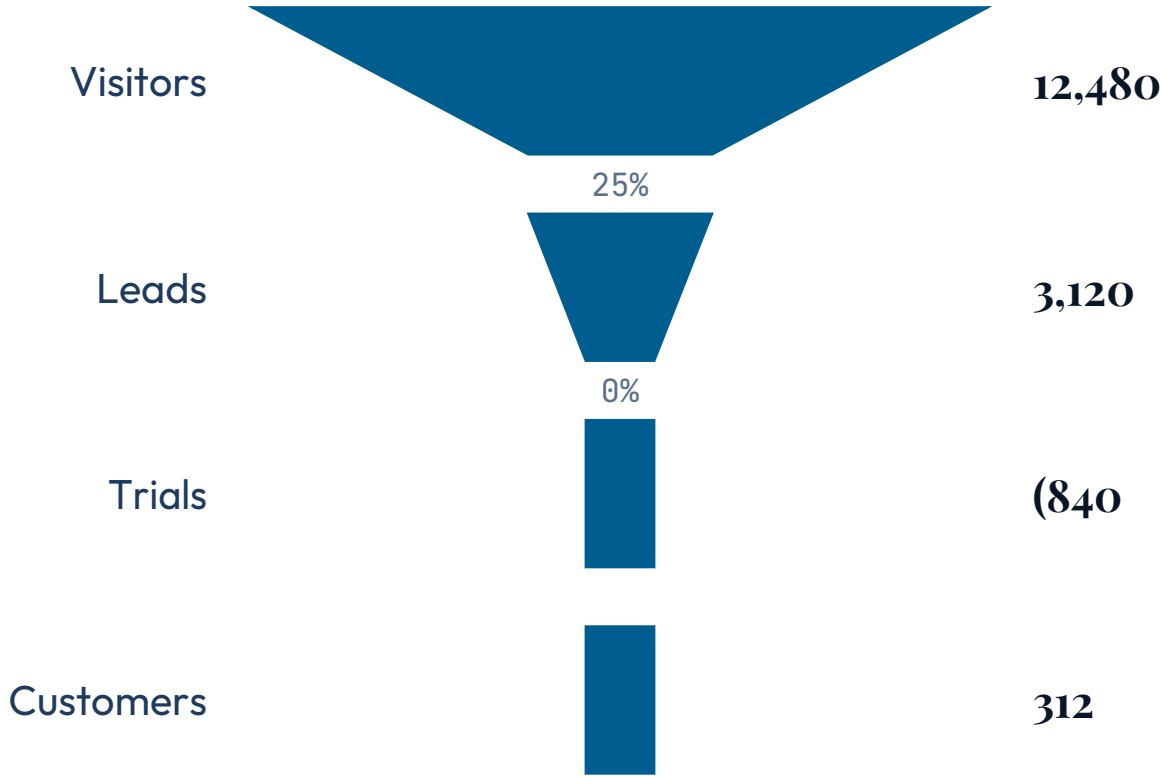

Units shipped · thousand

Digits that are not one number draw no bar either.

Before, North drew at 1.2 and East at 1,234, taller than every real bar.

An unpaired parenthesis reads as zero, not as 840.

Lint names each one, and why

`chart-value-malformed` · two signs · unpaired parentheses · digits that are not one number
