Feature demo · checks

One check, any container

The six answers now have one owner. A component puts a check in a pill, a row or a cell, and never draws a chip of its own.

Each criterion is a check inside a pill.

Build in-house

Residency · Speed · Audit trail

Full control, slow.

Vendor North

Residency · Speed · Audit trail

Audit still open.

Vendor West

Residency · Speed · ~~Audit trail~~

No audit tier.

A pricing feature is the check, then its words.

Starter

$0

- One shared workspace
- Audit log for thirty days
- ~~Single sign-on with your identity provider~~

For one team, trying it out.

Growth

$49 / mo

- Every workspace your teams need
- Audit log for a full year
- Data residency outside the EU

For a company that is scaling.

With pills, every cell says its answer.

REGULATION	NOTICE	CONSENT	RETENTION	BREACH
GDPR	In force	In force	Partial	In force
CCPA/CPRA	In force	Partial	In force	Unclear
PIPEDA	In force	In force	Undetermined	Not subject

In force · Partial · Unclear · Undetermined · Not subject

The label set renames the pills, the key and the narration together.

The full form works anywhere inline code does.

The shortcuts stay

Residency ✅ · SSO ⛔ · SOC 2 ❓

The full form names the answer

SOC 2 ❓ · export ❌

Spoken words work too

SSO ⛔ · rollout ⭕ · fax 🚫

With a label, one pill

✅ Residency ❌ Audit, EU

Style variants reach the check inside the pill.

Option one

Residency · Speed · Audit

Fast, unaudited.

Option two

Cost · Calibration · Adoption

Recommended.

Six answers, one owner.

We recommend the shortcut for a quick answer and `@check{…}` when a check needs a label. Either way, one plugin draws it.
