Feature demo · imagery

A bleed collage packs for the slide it sits on.

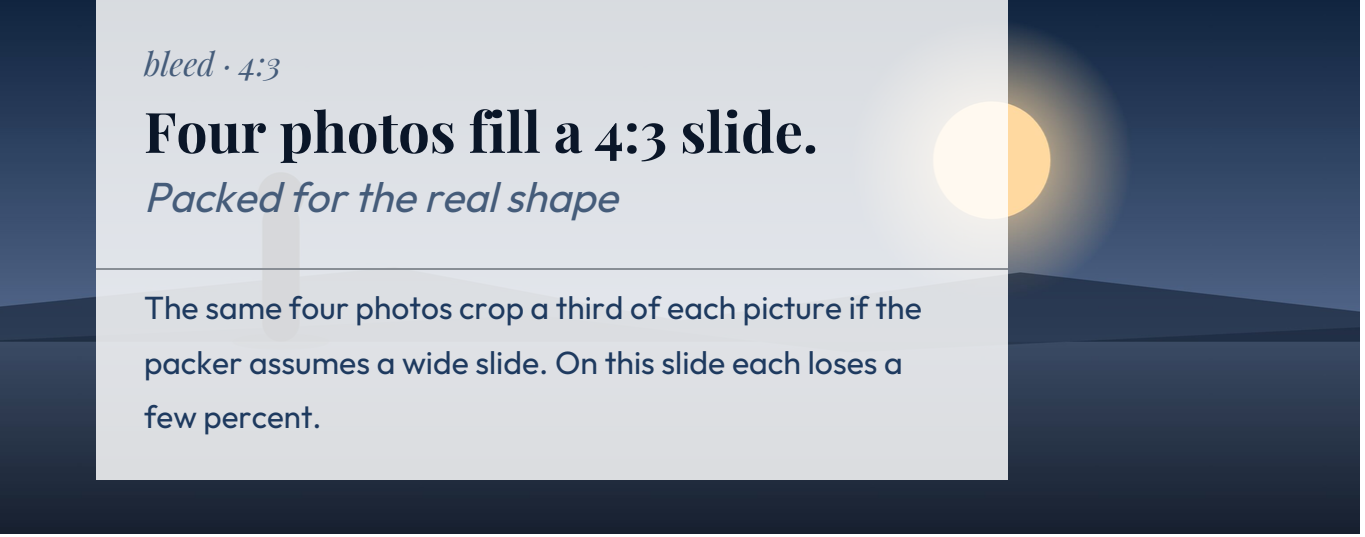

This deck is 4:3. The packer reads the canvas, so edge-to-edge photos keep their shape.

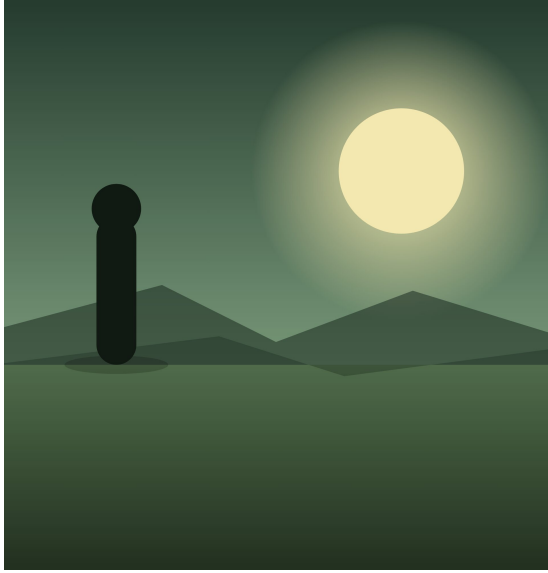

bleed · 4:3

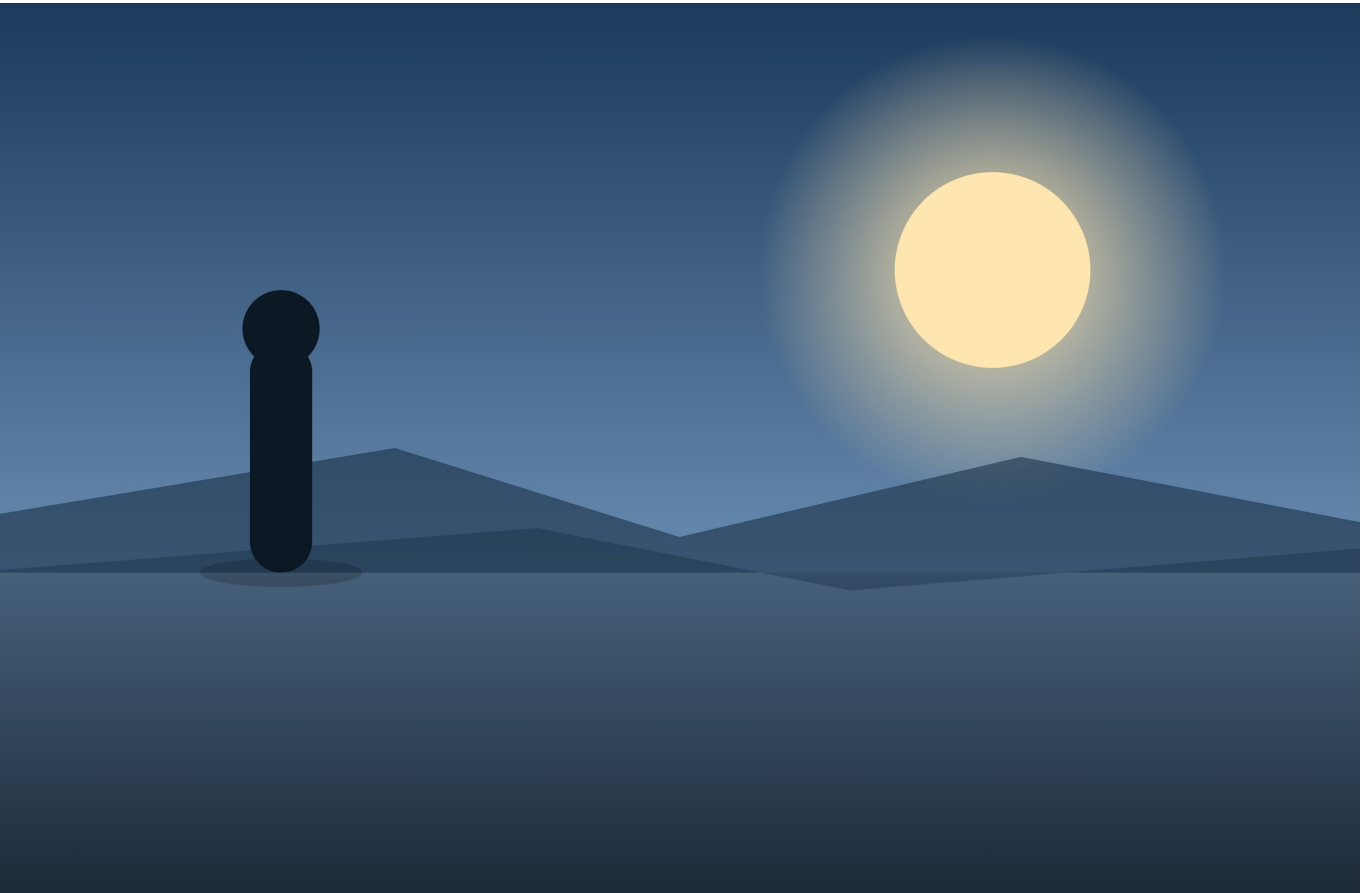

Four photos fill a 4:3 slide.

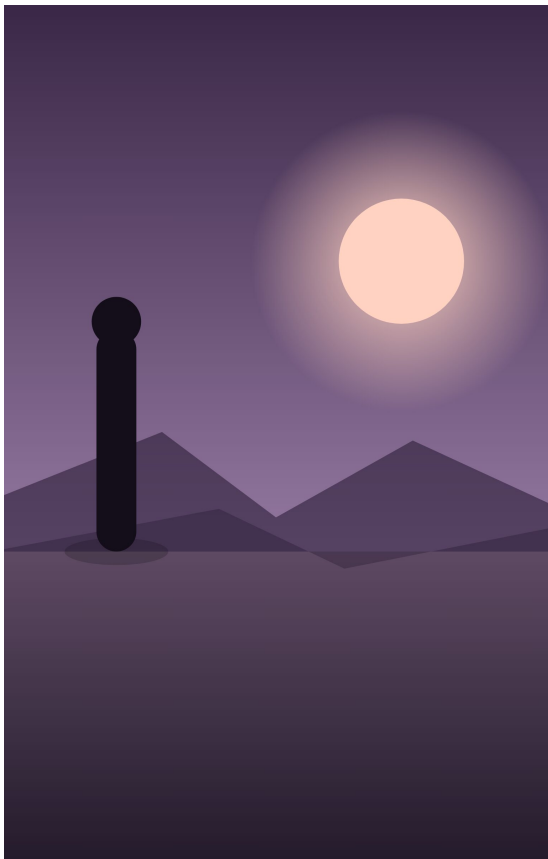

Packed for the real shape

The same four photos crop a third of each picture if the packer assumes a wide slide. On this slide each loses a few percent.

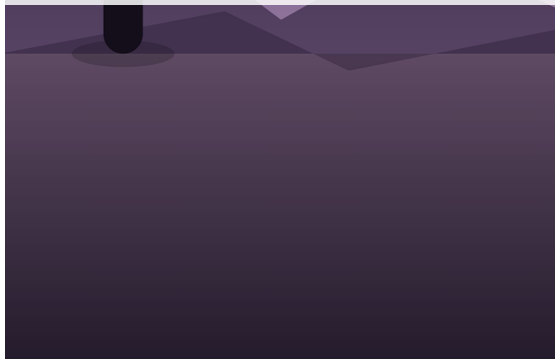

bleed · five photos

Five photos, one slide, no bands.

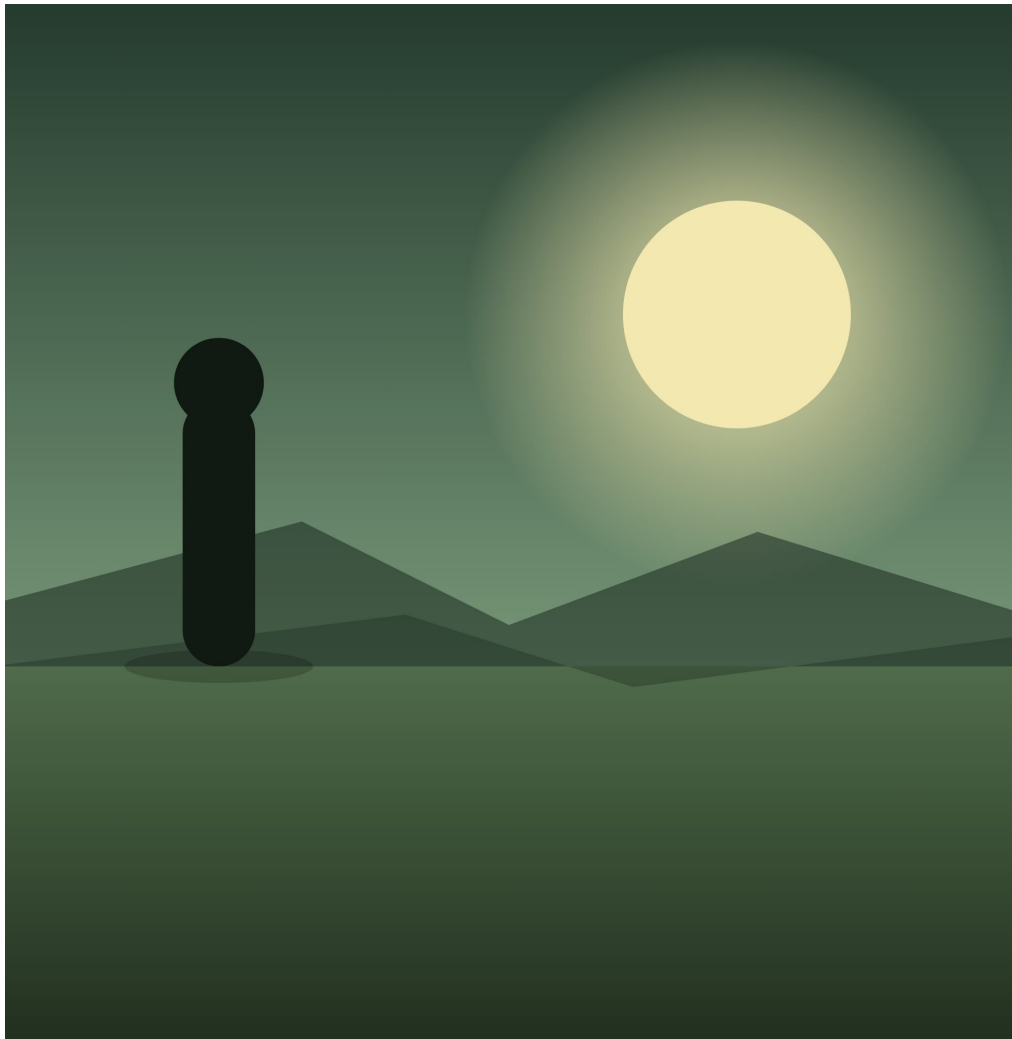

Free order

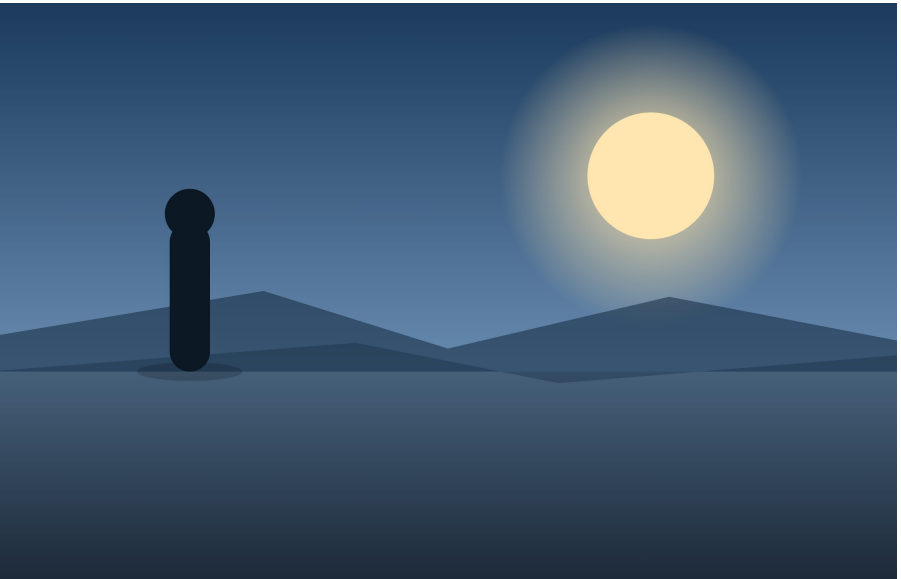

The layout changes with the count, and the grid still reaches all four edges.

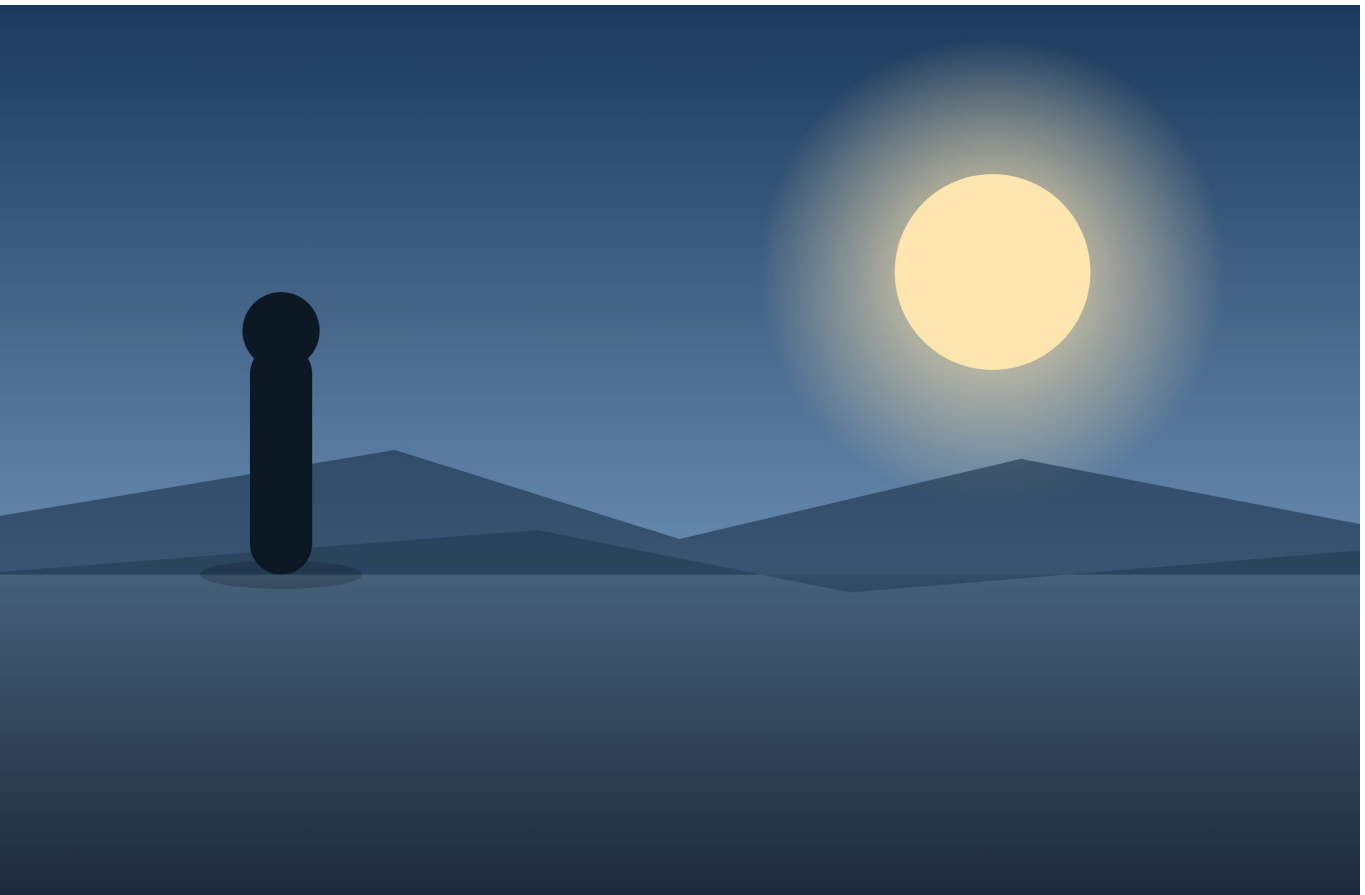

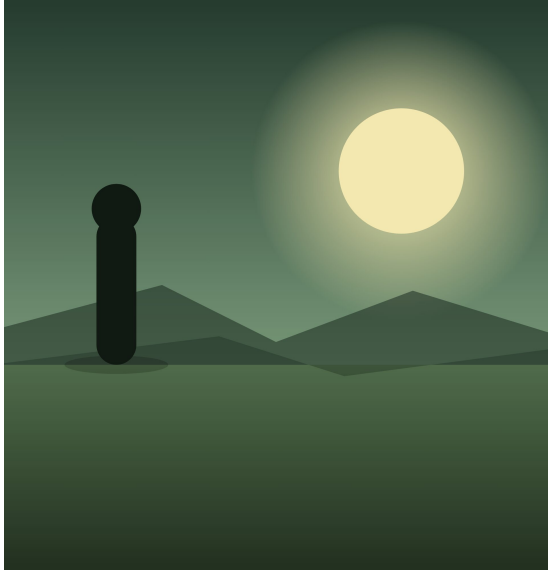

bleed · hero

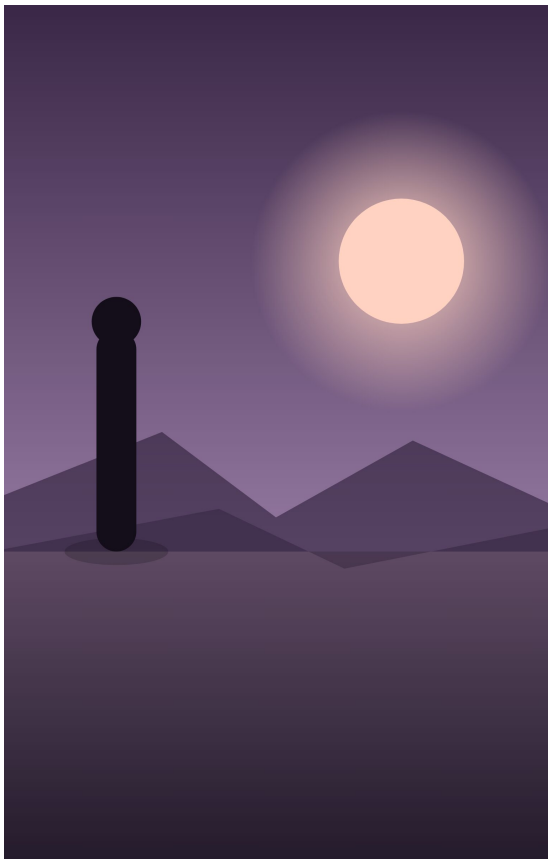

`hero` still makes one photo the largest.

The first photo leads

A hero keeps the largest tile while the packer closes the slide.

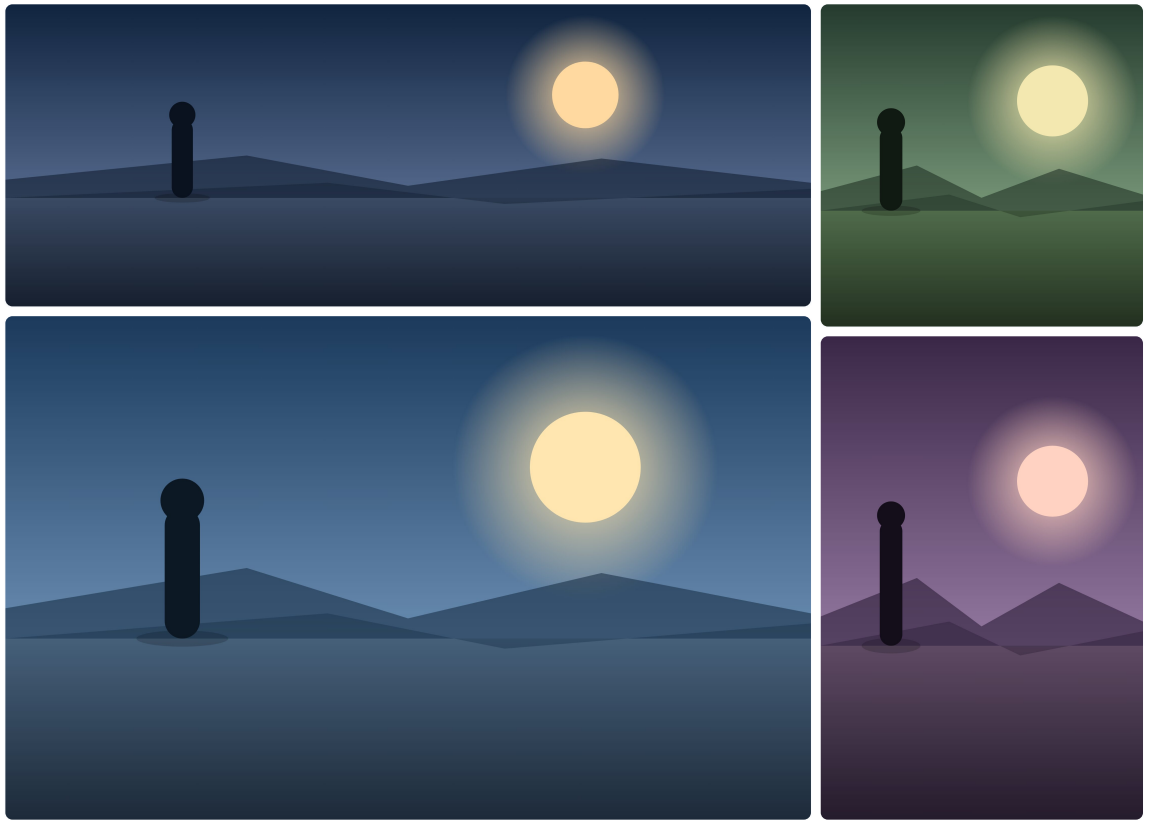

The default

Without bleed the text keeps its column.

Beside a 4:3 slide

The photos pack beside the text with no cropping. Only a bleed collage fills the slide.

bleed · ordered

`ordered` keeps the written order.

Left to right, top to bottom

The sequence stays as written even when the slide is edge to edge.
