Fit Ladder · the cover-paginate move

Dense lists, split with a cover

A long register can't shrink to fit — so when it holds more than one record, the engine leads with a cover, then gives each record a page. Structure decides the cut, not a measured overflow.

What the board will press on.

The questions, answered →

What the board will press on.

01 Why not extend the current vendor one more year?

The renewal lands in Q3 and locks us in through 2028. Switching now costs a single quarter of migration; switching after renewal costs three.

What happens to the team mid-migration? →

What the board will press on. (cont.)

02 What happens to the team mid-migration?

No headcount change. The same four engineers run both stacks through the eight-week overlap, then the legacy stack is decommissioned.

03 How confident are we in the savings?

The $1.2M is contracted, not projected — the signed rate differential, before any usage growth.

04 What is the rollback plan if the cutover fails?

The legacy stack stays warm for the full overlap; a failed cutover reverts in under an hour with no data loss.
