Palette · eight dark faces

Jewel tones, not primaries

Eight themes painted dark-mode diagram boxes in raw electric blue and violet. They now match indaco's restraint.

Flow & sequence · Flowchart

Each box is a deep fill of its own hue, under a pale edge.

Categorical cycle · the working six

Six neighbors, six colors, and none of them glows.

What changed

The dark fills were up to 70% more saturated than indaco's.

- Before: dark `--cat-N-fill` chroma reached 0.215–0.256 in eight themes; indaco and cuoio cap at 0.150.
- After: every fill above 0.16 is held at 0.16, lightness and hue kept, with one exception (next slide).
- Themes: ardesia, atelier, brina, burgundy, crepuscolo, laguna, magnolia, mustard.

Two exceptions

Near-twin neighbors had been told apart by glare alone.

- Laguna's indigo sat at hue 270, beside its blue at 260. Its own light fill and mark sit at 290, so its dark fill returns to 295.
- Ardesia, burgundy, crepuscolo and laguna each had near-twin neighbors in the first six slots. One swap each parts them.
- The adjacency ratchet now counts no hue theme below its floor.

Eight dark faces

A dark deck's diagrams now read as a palette, not a warning light.
