No deck-wide finish: — each slide sets its own

Finishes, per slide

Write one class. The finish paints on that slide alone.

One class activates the whole finish.

`_class: finish-atrium` — no deck-wide `finish:`, no second `finish` token.

The backdrop paints on this slide alone.

The compositor is implied.

A `finish-<name>` class carries the whole finish: the engine adds the `finish` layer for you, so the backdrop paints on this slide only.

Same on a dark canvas.

`_class: finish-gallery dark` — the finish is palette-blind, so it tracks light and dark from the one class.

Mix finishes across a deck.

Each slide can wear a different finish — atrium, halo, gallery, meridian — because the finish is a per-slide class, not a deck-wide switch.

built-in presets AND your saved finishes

Independent by slide
