Feature · _focusStyle: highlight

Five ways to point at one card.

`_focus:` picks the target and `_focusStyle:` picks how it is shown. Two styles dim or blur the rest, and two tint or outline the target. `highlight` is new: it tints the target and edges it in the accent, leaves every other target untouched, and works on every axis `_focus:` can address.

`spotlight` — dim the rest (the default on cards).

Signal Intake

Weekly structured collection across customer conversations, market data, and competitive moves.

Scoring Model

Each signal scored on confidence, recency, and strategic relevance, reviewed quarterly.

Decision Log

Every decision recorded with the signals that informed it and the criteria applied.

Calibration Loop

Monthly retrospective comparing predicted outcomes to actual outcomes.

`blur` — defocus the rest, the camera way.

Signal Intake

Weekly structured collection across customer conversations, market data, and competitive moves.

Scoring Model

Each signal scored on confidence, recency, and strategic relevance, reviewed quarterly.

Decision Log

Every decision recorded with the signals that informed it and the criteria applied.

Calibration Loop

Monthly retrospective comparing predicted outcomes to actual outcomes.

`ring` — outline the target, nothing dims.

Signal Intake

Weekly structured collection across customer conversations, market data, and competitive moves.

Scoring Model

Each signal scored on confidence, recency, and strategic relevance, reviewed quarterly.

Decision Log

Every decision recorded with the signals that informed it and the criteria applied.

Calibration Loop

Monthly retrospective comparing predicted outcomes to actual outcomes.

`list-fill` — tint the target, nothing dims.

Signal Intake

Weekly structured collection across customer conversations, market data, and competitive moves.
