Finish · Logo · Notes

Chrome belongs to the frame

A finish no longer drags the running chrome into the content flow.

Every slide here carries a finish, a header, a footer and page numbers.

The header sits at the frame's top-left berth, the footer at its bottom-left, both on the
finish's own backdrop. Neither is in flow, so neither costs the stage a pixel.

The stacking rule wanted a z-index, and took the flow with it.

- The intent
  - A finish paints its backdrop behind the slide, so content above it needs a stacking order.
- The cost
  - On a child that positions itself, `top` stops meaning "inset from the frame" and starts meaning "offset from where I landed in flow".

Measured, before the fix.

CHROME	DECLARED	RENDERED
running header	28px / 30px berth	116px / 94px, on 11 of 15 slides
deck logo	`logo-finish: bottom-center title`	centered across, bottom edge on the frame inset, title slide only (the footer yields there and nowhere else)

A mark whose y drifts per slide is the tell: an absolute placement cannot depend on the copy above it.

A trailing paragraph is promoted to a note.

- A note is a footnote
  - A short paragraph after a list or a table gets a hairline rule and muted ink.
- A conclusion is not
  - "A list, then a concluding sentence" is ordinary prose, and promotion changes what it meant.

This paragraph follows a list, so it renders as a below-note.

The same slide, with `no-note`.

- A note is a footnote
  - A short paragraph after a list or a table gets a hairline rule and muted ink.
- A conclusion is not
  - "A list, then a concluding sentence" is ordinary prose, and promotion changes what it meant.

This paragraph follows the same list, and stays body copy.

Position is withheld from frame chrome, and a gate holds it there.

Where The Fix Lives

The rule that was wrong is the rule that changed.
