Slide metadata · records

One record per slide

A slide's layout, footer and notes live in one comment.

A record is read in four steps.

STEP 01

The door finds each own-line record comment before anything else reads the deck.

STEP 02

It checks every field against the catalog and drops what a slide may not set.

STEP 03

It writes one internal comment on the same lines, so no position moves.

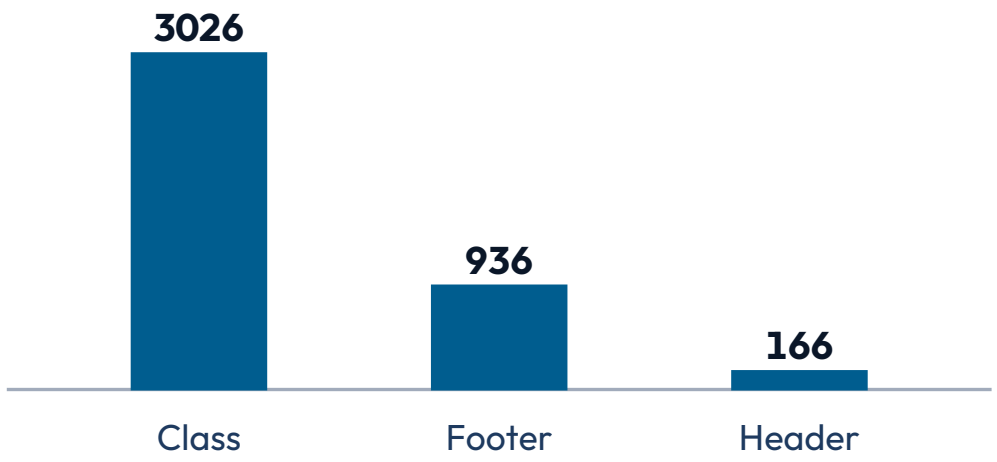
STEP 04

The engine applies the fields exactly as the old comments applied them.

A pane is one more field.

DIRECTIVE COMMENTS TODAY

by key, example and gallery decks



WHAT A RECORD REPLACES

One comment per setting

A separate speaker-note comment

KEY INSIGHT

One comment, typed fields, the same pixels.

Focus steps still walk the slide.

STEP 01

Each step lights the next item, live.

STEP 02

The record's class stays on the slide.

STEP 03

The footer rides along unchanged.

Notes go inside the same comment.

STEP 01

A note field is the speaker note, for the presenter.

STEP 02

A reader field is for whoever opens the exported file.

STEP 03

An arrow that ends a comment gets a backslash before its last character.

Records · step 2 of the meta record

Same slides, one grammar.

Directive comments still work; the next steps retire them.
