typography · one reading size per venue

Every list, card and table now reads at one size.

list takeaway · was 21pt

A takeaway row reads at the body size now.

Rows used to sit a full step above card text.

The venue scaled them, but never brought them in line.

Now a row, a card and a cell match on every slide.

A list at laptop holds twice the rows it did.

KEY INSIGHT

A reader's eye no longer has to re-focus between slides.

cards-grid · was 16pt, unchanged

Card bodies set the size everything else now meets.

Lists come down.

From 21pt to 16pt, so a list holds more rows.

Tables come up.

From 13.5pt to 16pt, so a cell reads from farther away.

Cards stay put.

They were already at the reading size.

KEY INSIGHT

The body role, `--fs-body`, is the one reading size.

list-tabular · was 13.5pt

A tabular row reads at the same size as a card.

01	**Laptop**	16pt, for a PDF read on your own screen.
02	**Huddle**	18.4pt, for four to six people around a TV.
03	**Conference**	20.8pt, for a room of ten to thirty.
04	**Hall**	24.0pt, for a stage screen.

KEY INSIGHT

The venue multiplies one size instead of three.

table · was 13.5pt

A table cell now reads at the body size too.

VENUE	READING TEXT	CODE	TABLE ROWS AT 12 WORDS
Laptop	16pt	13.5pt	10
Huddle	18.4pt	15.5pt	8
Conference	20.8pt	20.1pt	7
Hall	24.0pt	23.0pt	3

KEY INSIGHT

Bigger cells cost rows: split a long table instead of shrinking it.

glossary · was 13.5pt

Glossary

R – E

TERM	DEFINITION
Reading text	Text read line by line, several items to a slide.
Display text	One sentence or number that is the slide, set bigger on purpose.
Venue	The room a deck is shown in, which sets one multiplier for all type.
Exception	A component that keeps its own size, named in the decision note.

code · stays at 13.5pt

Code keeps one step down, because it cannot wrap.

```
// A code line that wraps changes what it says, so code keeps
// its column budget: about 102 columns at laptop.
const reading = venueScale * FS_BODY;          // 16pt at laptop
const code = venueScale * FS_BODY_COMPACT;     // 13.5pt at laptop
```

KEY INSIGHT

Code is the one reading exception, by the owner's ruling.

list-steps timeline · was 11.2pt

A timeline step reads at the body size too.

Before

Chrome size, in a fixed narrow column.

After

Body size, in an equal share of the row.

At hall

Lines no longer wrap a word at a time.

authority-chain branching · was 11.2pt

Each branch now reads at the body size.

STATUTE

- `15 U.S.C. §6501` COPPA, 1998
- `16 C.F.R. Part 312` FTC implementing rule
