Panes · Mermaid orientation

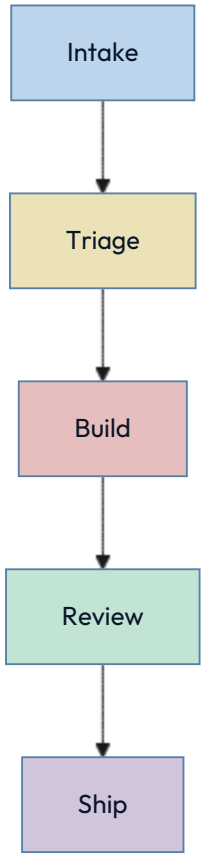

A diagram lays out for its pane

Delivery · The full-slide diagram

Five stages, left to right, as a slide draws them.

In a tall pane, the same flow runs down the page.

- Intake takes a day
- Review holds work for a week
- Ship is weekly

Delivery · A wide pane

Two teams share the same five stages.

Platform ships Mondays

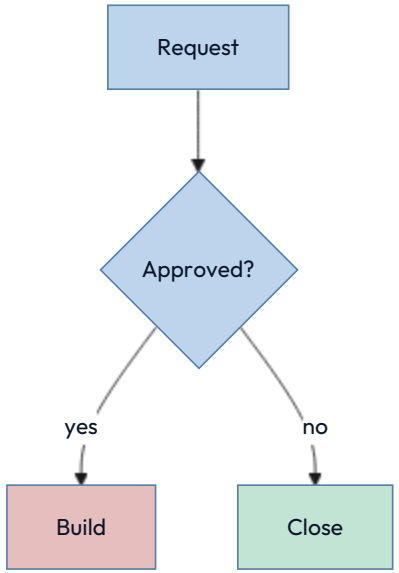

Apps ship Thursdays

KEY INSIGHT

A 65% pane is wide, so the flowchart keeps the author's direction.

Delivery · A vertical source

A top-down flowchart needs nothing from the pane.

Most requests pass on the first review

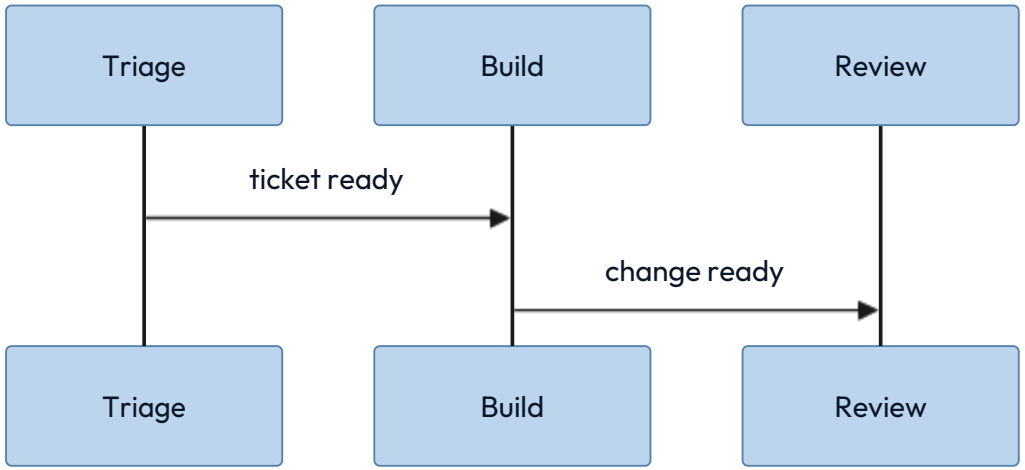

A closed request can be filed again

KEY INSIGHT

Only a left-to-right or right-to-left flowchart is turned; every other diagram keeps its source.

Delivery · A sequence

The hand-off is two messages.

Triage owns the ticket until Build accepts it

Review sees only finished changes

The CLI and the live preview read the same stamp

The pane decides the direction
