Panes · radar sizing

A radar lays out for its pane

Vendor review · Scale 0–10

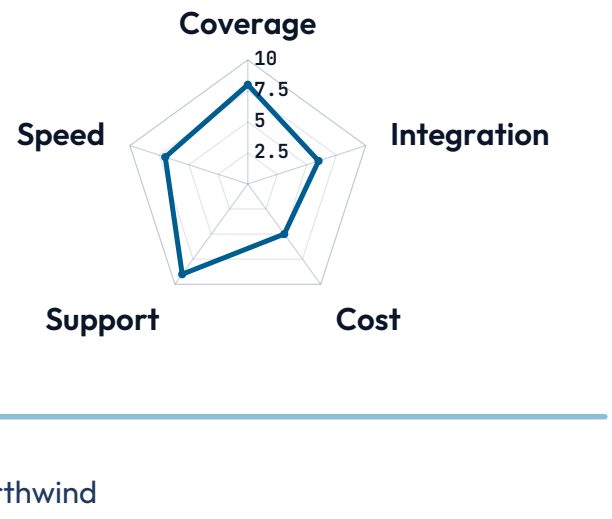

Northwind leads on support; Contoso on cost.

— Rim labels 11.4px on this slide; 14px on a slide with no note.

Vendor review · A 35% pane

In a narrow pane the key drops below the web.

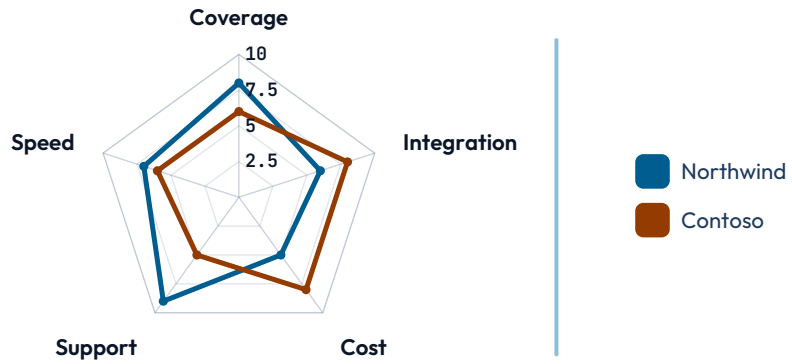

Northwind leads on support and speed

Cost is its weakest axis

— Rim labels 13.9px, up from 6.3px (its 5.1px ticks were under the type floor), and the web grew too.

Vendor review · A 50% pane

A half-width pane grows its type as far as the web allows.

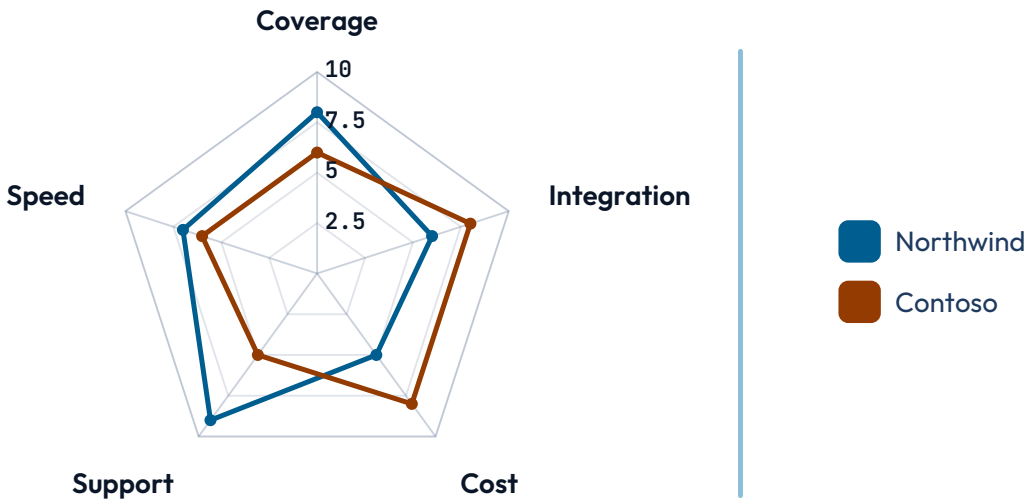

Northwind wins on support and speed

Contoso wins on cost and integration

— Rim labels 11.3px, up from 9.0px, for 16% of the web. A pane's web may give up to 25%.

Vendor review · A 65% pane

A wide pane reads at the slide's size.

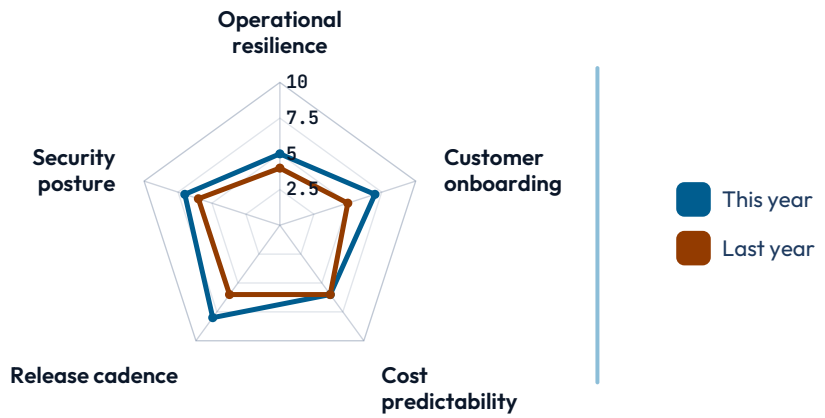

Support decides it

Cost is the tie-break

— Rim labels 14.0px, up from 11.0px, for 3% of the web.

Operating review · Long axis names, a 50% pane

Resilience is the axis that still lags.

Resilience moved one point in a year

Onboarding moved two

Everything else held or rose

— Rim labels 11.3px, up from 9.0px. Long names wrap at the size the page paints, so none runs into the key.

The rim labels are what a radar is read by
