Lattice · Social formats

Boardroom decks, edge to edge.

Native 9:19.5 — full-bleed for a modern phone screen, top to bottom.

Why it matters

9:16

The aspect ratio that owns the mobile feed.

Lattice now renders it natively — no cropping, no export gymnastics.

The idea

One deck source. Every surface it needs to live on.

Set the `size:` directive in the front matter and the layouts adapt to the taller canvas — type scales up to read at phone distance, content fills the frame instead of clinging to the top.

MOBILE

> *The best deck is the one that meets your audience where they already are — and right now, that's a phone held upright.*

— LATICENT FIELD NOTES

Section 02

Authoring stays exactly the same.

One directive

Pick the canvas with `size:` — and nothing else moves.

Set `size:` to `story`, `square`, `portrait` or `mobile` in the front matter. Components, palettes and treatments all work unchanged — the layouts simply adapt to the taller frame.

One line of front matter — and you're feed-ready.

Ship it

Your next launch belongs in the feed.
