*Studio · Stage*

# The room gets the deck. You get the cockpit.

Present now opens two surfaces instead of one: a chrome-free Stage window for the projector, and the console you already knew — with your notes and the next slide on it.

WHAT CHANGED

# Two surfaces, two audiences.

The controls did not move because they were untidy. They moved because they were pointed at the wrong person.

### STAGE

- The slide, filling the display
- Captions, so a muted room follows
- A rail you can switch off

### CONSOLE

- Play, the lens, the slide grid
- Next slide and speaker notes
- A talk clock and private zoom

# What an audience used to see behind your slide.

*Section 01*

# Driving it

# Open, place, talk.

1

**Stage**

Press S. The deck opens in its own window.

2

**Place**

It finds the external display; F fills it.

3

**Talk**

Drive from either. One deck, one place it is kept.

# What came back to the console.

**Next slide.**

What comes after this one, from the same engine.

**Speaker notes.**

Your talk track, on the screen only you see.

**Talk clock.**

Counting since you started. Reset arms first.

**Private zoom.**

Pinch the console slide. The room sees nothing.

> *Backstage is definitionally the part of the theater the audience cannot see.*

— WHY THE RENAME COULD NOT HAVE FIXED IT

*One new word · three deleted*

# Preview it. Rehearse it. Present to drive. Stage for the room.
