Feature demo · list-steps chevron / converge / ghost

The case, built one stage at a time.

Three new `list-steps` variants for a labeled argument that cascades **down** the frame — a chevron cascade, a converging funnel, and an editorial ghost — all from the same plain numbered list.

chevron — make the case, stage by stage.

PROBLEM	Define the problem that is causing the pain.
VISION	Show what the world looks like once it is solved.
APPROACH	Detail the moves that get from here to there.
PLAN	Commit to concrete steps, owners, and a date.

converge — four signals narrow onto one bet.

`ghost` — the thesis, stated plainly.

BELIEF

Distribution beats features.

CONSEQUENCE

Spend on reach before polish.

RISK

A better-funded copy outspends the channel.

GUARDRAIL

We defend the channel once retention proves out.

The chevron holds at three stages, too.

LAND

Win one team with a sharp, self-serve first use.

EXPAND

Turn that team into the account's internal reference.

DEFEND

Wire in so switching costs outlast the next budget cycle.

Same list, three arguments.

Every slide here is a plain numbered list with a one-line body — the variant name (`chevron`, `converge`, `ghost`) is the only thing that changes. Pick `chevron` for a general downward sequence, `converge` when the stages narrow onto a decision, and `ghost` when the words are the point.
