Lattice · Feature deck

Four fixes to the state chart.

A caption stays one line, labels keep their room, and the key tells running work from finished work.

Caption

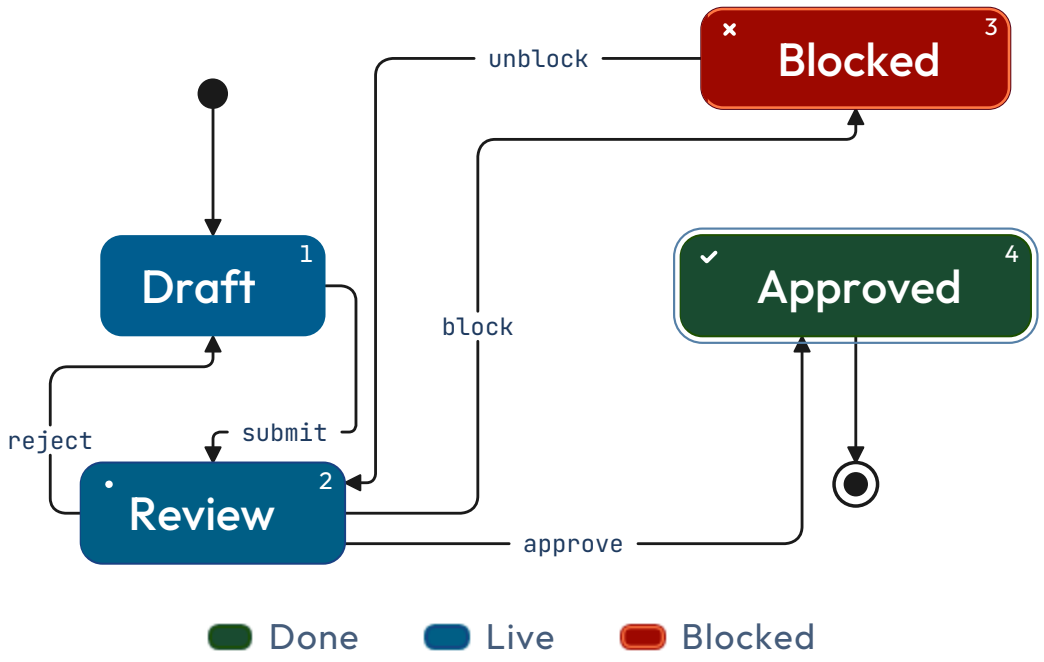

A caption with code reads as one sentence.

Labels sit on their line, which is cut under them, never across a state.

Paired edges

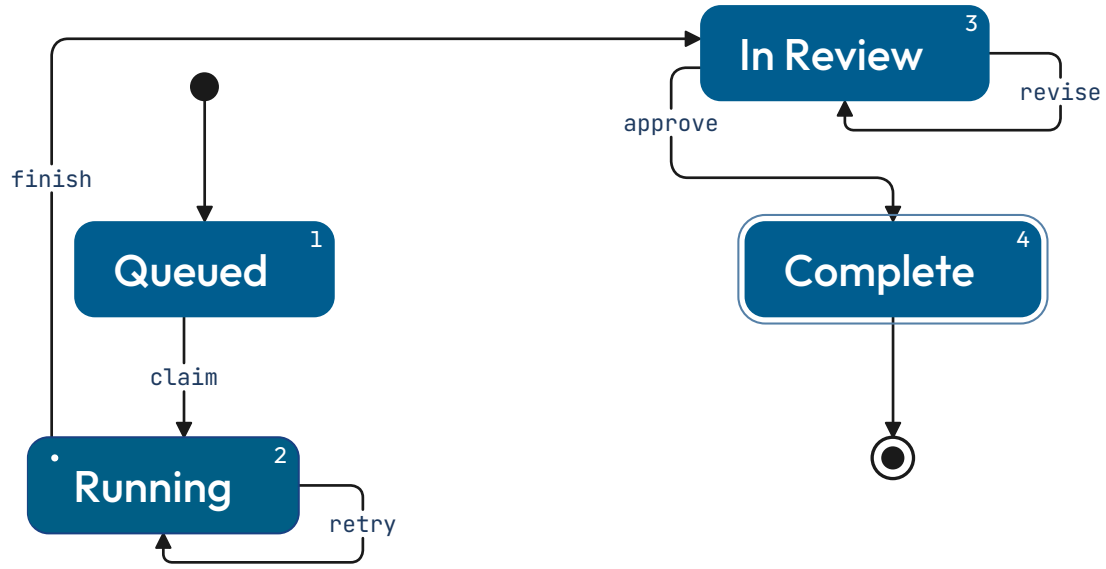

Two edges between the same states keep two labels apart.

Each pair gets room for both labels, and no label sits on another edge's line.

Self-loops

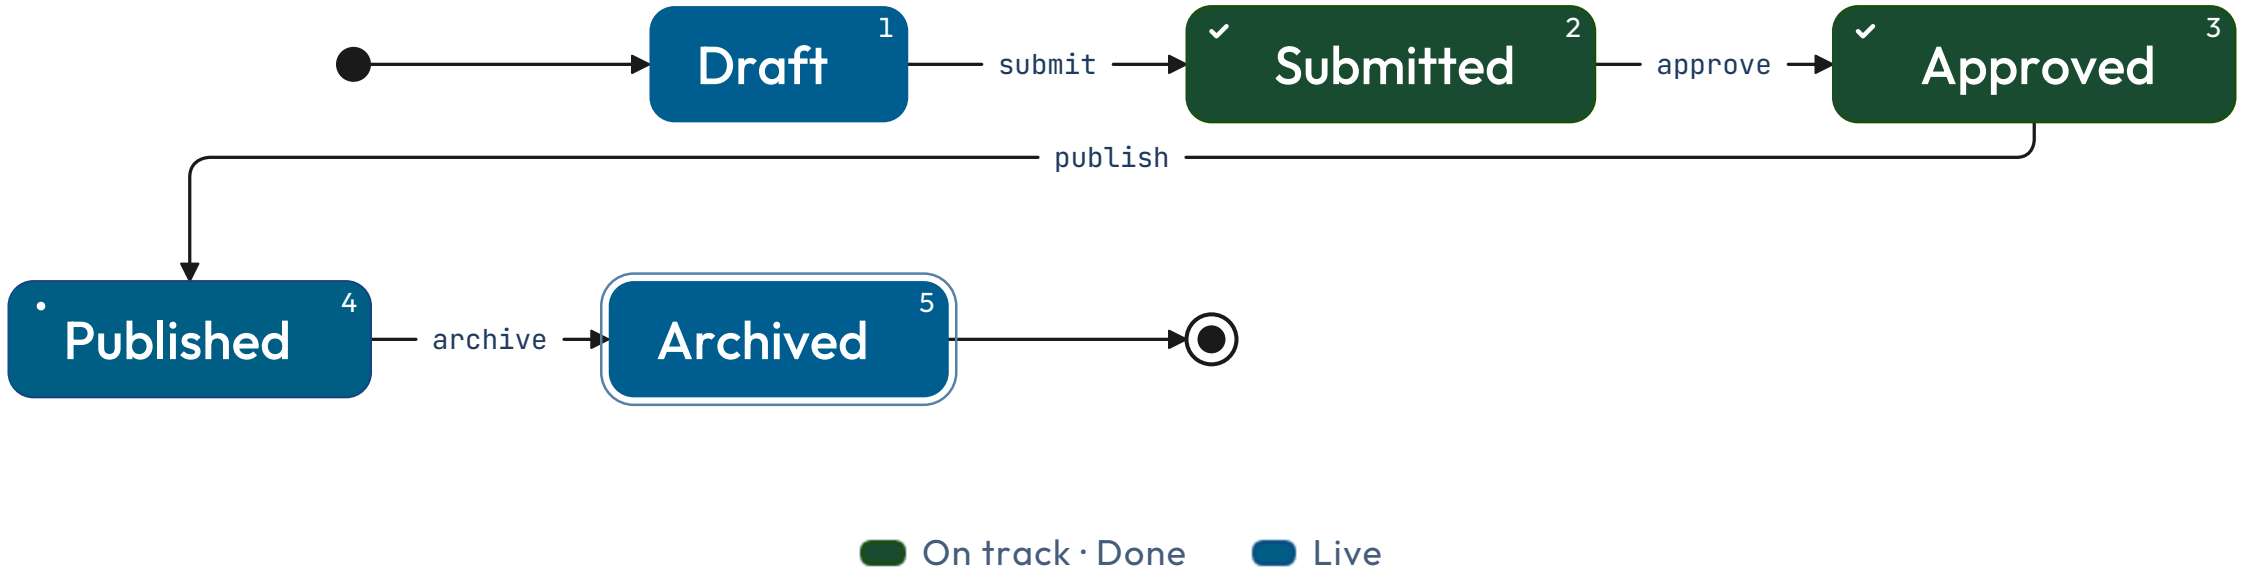

A loop's label sits clear of its own arc.

The label moves just past the arc, so the loop and its name never overlap.

Status key

Running work and finished work look different.

`live` paints blue, as on a gantt bar; `on-track` and `done` share one green chip.

Portrait

Portrait decks keep their labels in scale.

The chart's text floor now grows with the deck's type. On a story-sized deck, a state chart sets its edge labels and ordinals at the same scale as its state names, so the export no longer warns TYPE FLOOR. The portrait gantt and state-chart deck shows it.
