PINNED

A feature demo

Status markers, on brand

One shape system for every meta-signal: the marker says **what**, the deck-wide register says **what shape**. Set it once, override anywhere.

State markers

8

state markers — Confidential, WIP, Draft, TBD, Redacted, Archived, Pinned, Revised — each with its own label and palette color.

The default shape is a coherent family

Set nothing and every state marker renders in this deck's `stamp: seal` — the uniform corner seal — so a mixed-marker deck reads as one hand, not eight competing signatures. This slide is **WIP** in that same seal.

Override one slide's shape

Same marker, different shape

Still **Draft**, but wearing `stamp-notch` — a top hairline band — not the deck seal.

The marker never changed

Only the shape token did; the label and `--warn` color are identical.

Boardroom subset first

`tab` · `notch` · `bracket` · `seal` · `pill`, then a wider range.

Bracket is the quiet technical tag

`stamp-bracket` frames the label as `[ REDACTED ]` with no fill — the monospaced option for engineering and legal decks. The same marker-blind rule serves every state; only the shape token changes.

This quarter cleared every bar

Uptime held at **99.98%**, net revenue retention rose to **+18%**, and the quarter closed with **zero** Sev-1 incidents. The tone marker sets the color (`--pass`); the deck `tone: rail` sets the shape.

Two Sev-1 incidents are still open

CSAT slipped **4 points** this week and the primary region breached its SLA. `tone-fail` sets the `--fail` color; `tone-glow` overrides the deck rail with a full inset ring, so this alert slide reads apart from the quiet default.

`tone: edge` recolors the brand bar

Instead of a competing top band, `tone-edge` **recolors the spectrum itself** — the top bar above is now solid `--warn`, not the rainbow. It respects the brand frame rather than fighting it, the same move `accent` makes.

Both axes compose without collision

This slide is **Pinned** (a state marker, `--accent`, in the deck seal) **and** carries a **pass** tone (`--pass`, the deck rail) at once — the state mark and the tone band never overlap, by construction. One vocabulary, two signals.

REVISED

Set it once, override anywhere

`stamp:` + `tone:` *in front matter, a token per slide — every marker on brand.*
