Feature demo · card elevation

Cards that lift — in the light and in the dark.

The **Struck** elevation treatment gives every card surface a sense of depth that survives both canvases and the vector PDF. On a light deck it casts a crisp offset shadow; on a dark deck a rim-light catches the top edge, so the card floats without ever changing its fill.

The elevation reads the same way to every audience.

Same fill, more depth

The card color never changes — the lift comes entirely from the shadow, so a fixed surface token stays fixed.

Light-mode contact

On paper, dark contact layers cast a crisp offset shadow beneath each card. Zero blur, so it stays sharp.

Dark-mode rim

On a dark canvas, a hairline of light catches the top edge — the way real light hits a raised panel.

Exported clean

Every layer has zero blur, so the PDF renders it as pure vector — no gray-box soft-mask artifact.

Depth holds at any card count.

Two-up

Wide cards, generous stage — the lift is subtle but present, framing each option cleanly.

Three-up

Tighter columns keep the same shadow weight; the gap absorbs the offset so cards never crowd.

Four-up

Even at the densest tiling the rim and contact scale with the slide, so nothing flattens out.

Every card in a dense grid gets the same lift.

The numbers now sit on tiles, too.

118%	71%	1.4×	92%
NET RETENTION	GROSS MARGIN	FASTER CYCLE	FORECAST CONFIDENCE

Stacked cards gain separation without rules between them.

Elevation replaces the divider

Each card lifts off the stage on its own, so you no longer need a hairline rule to tell one row from the next.

The eye follows the light

A consistent top-edge highlight gives the stack a single, believable light source from above.

The lift carries onto metric tiles, too.

Uptime

– 99.98%

ROLLING 90-DAY AVAILABILITY ACROSS ALL REGIONS.

Latency

✓ 142 MS

P95 RESPONSE, EDGE TO ORIGIN AND BACK.

Error rate

– 0.03%

FAILED REQUESTS AS A SHARE OF TOTAL VOLUME.

Throughput

✓ 4.1M / DAY

PEAK SUSTAINED REQUESTS WITHOUT DEGRADATION.

> *The dark deck used to look flat — every card melted into the background. Now they sit up off the page, and nobody had to touch a single color.*

— DESIGN REVIEW, BOARDROOM TEMPLATE

The elevated tier both pops and floats.

Standard

$0 / mo

- Card elevation on every surface
- ~~Accent ring highlight~~

Baseline depth, no highlight.

MOST POPULAR

Signature

$24 / mo

- Card elevation on every surface
- Accent ring highlight

The accent ring composes over the lift.

Enterprise

let's talk

- Card elevation on every surface
- ~~Accent ring highlight~~

Depth scales to any theme.

One token · every card · both canvases

Depth that survives the export.

Rendered in `indaco` and `indaco-dark` from the same source — one `--elevation-card` token, zero blur, no fill changes.
