New component · inventory · grid · structure

The slide with the faces on it.

Meet-the-leaders, meet-the-team, and the QBR roll-call — one layout with five compositions, and a monogram for everyone whose headshot never arrived.

Five shapes, because the people slide is never the same slide twice.

A roster of six with a line each is a different picture from a roster of eighteen, and both are different from one leader with four reports. `team-profile` writes them all from the same three lines of Markdown.

- The default tiles portrait cards three up — a face, a name, a role, one line on what they own.
- `lead` hands the first person a hero row and ranks the rest beneath a rule; `bio` turns the grid on its side, giving each leader's line a row of its own.
- `bench` packs the long roster six up, and `sides` faces two labeled teams across the table.

Your account team

Six people own this program, and you can reach every one.

Ada Okafor
EXECUTIVE SPONSOR
Clears blockers above the program.

Marcus Vale
PROGRAM DIRECTOR
Runs the weekly cadence.

Priya Raman
HEAD OF DELIVERY
Staffs the pods, holds the dates.

Tomas Lindqvist
SOLUTIONS ARCHITECT
Reviews every schema change.

Nia Bello
DATA LEAD
Owns the migration cutover.

Jonah Reyes
CUSTOMER SUCCESS
Your standing contact between reviews.

Program leadership

One name is accountable; four carry the work.

Ada Okafor

EXECUTIVE SPONSOR

Signs the scope and owns the outcome.

The four people with no headshot are the point.

Half a roster arrives without photos — the customer side of a QBR almost always does. Rather than leave four holes, the engine reads the initials off each name and draws them in the circle.

- Beside real faces the monogram stays neutral, as it does two slides back: it is standing in for a photo, not competing with one.
- When nobody has a photo it takes a categorical hue instead, because six identical gray discs is not a design.
- Write `- Name` and a backticked role and you have a usable slide; the portrait is optional everywhere.

Put the faces on the slide.

One `_class` directive, then one bullet per person.
