Evidence · Stack · Structure

stats

Row of 3–5 stat tiles, each with a big number and a label.

evidence · stats

A row of stats, equal weight, no chrome.

Each stat is a number and a two-word label — the row does the arguing.

When NOT to reach for stats.

Six or more tiles

Past five tiles the row compresses and the numbers shrink below boardroom legibility. Split into two rows or move to `kpi` where the dashboard grid gives each metric its own card.

Tiles with no number

If a tile is mostly prose with a small number, the visual hierarchy inverts and the row reads as a list. Stats is for **bold-number + caption** — anything more belongs in `cards-grid`.

Status framing without pills

If each metric needs a target, a trend, and a status indicator, you're authoring a dashboard, not a stats row. Move to `kpi`, which carries that vocabulary.

Related components

See also.

`big-number` — one number is enough to carry the slide

`kpi` — metrics need targets, trends, and status pills

`split-panel` — one focal KPI with a paragraph of supporting prose

`piechart` — the numbers are parts of a whole, not independent

`progress` — the metrics are completion percentages across workstreams
