Imagery · Canvas · Prose

image

Image as the slide's anchor, with optional text alongside — composition adapts to the asset and the deck.

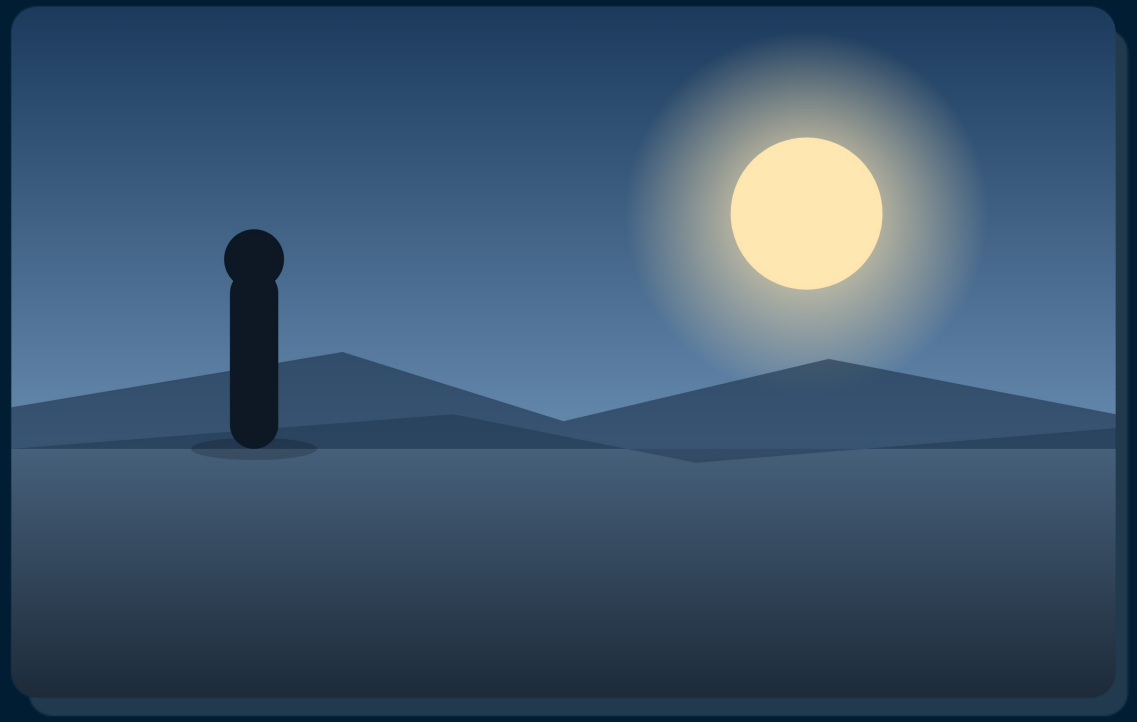

The image layout reads the asset’s shape.

Two-thirds of trials that reach the first generated report convert to paid; the ones that stall at workspace setup almost never do. Hand the layout any photo — it resolves the composition from the asset's shape.

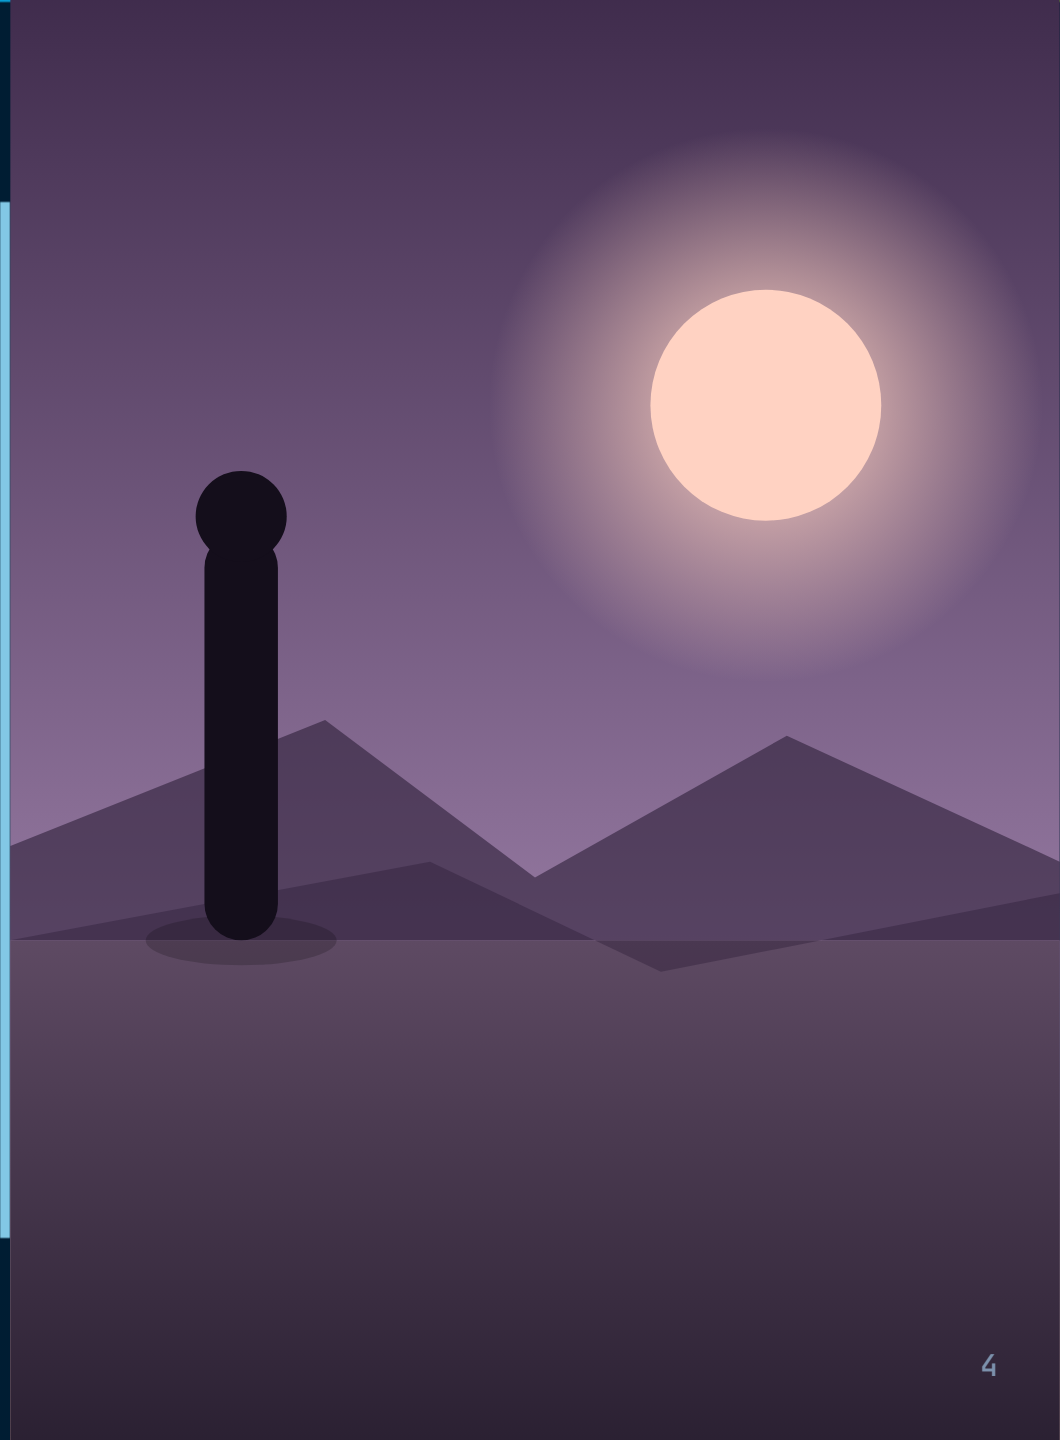

clean drops the caption chrome.

Two-thirds of trials that reach the first generated report convert; the ones that stall almost never do.

split gives a portrait its full column.

A portrait photo wants its full height. We give it a column and let the argument run alongside.

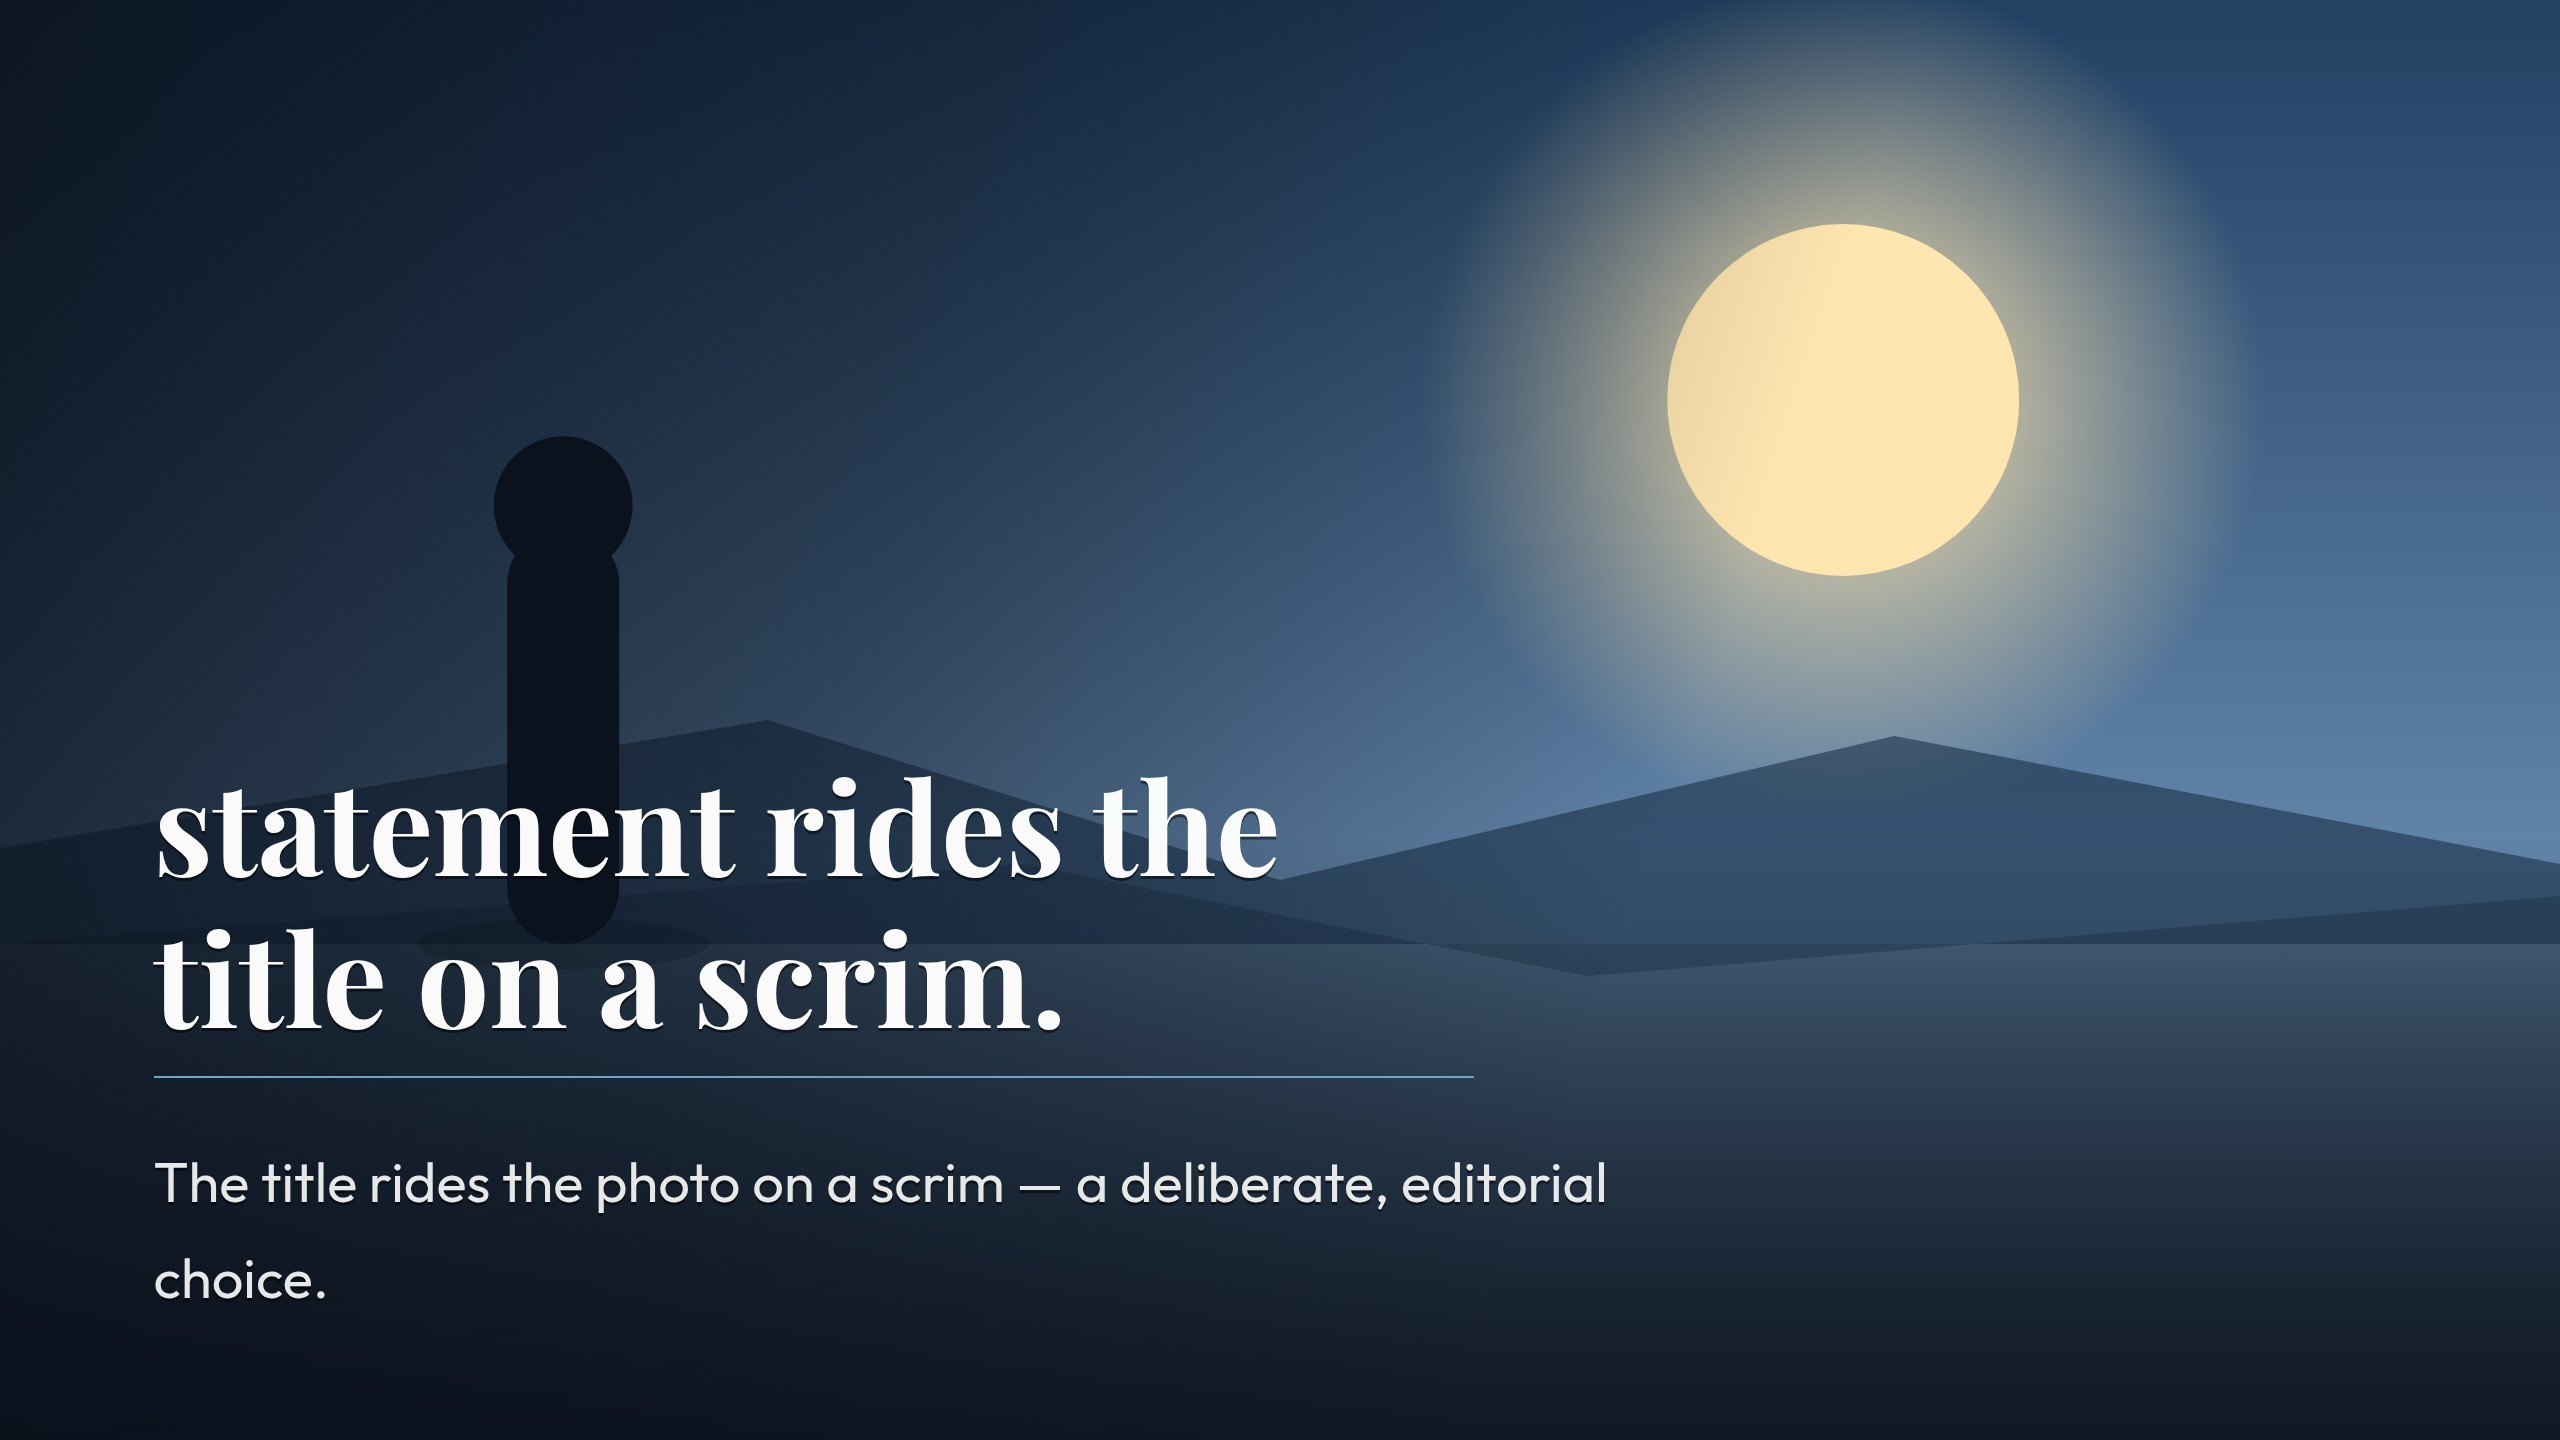

spotlight lets a panorama own the frame.

When the photo already matches the canvas, let it carry the slide — the message rides in a solid card so it never fights the image.

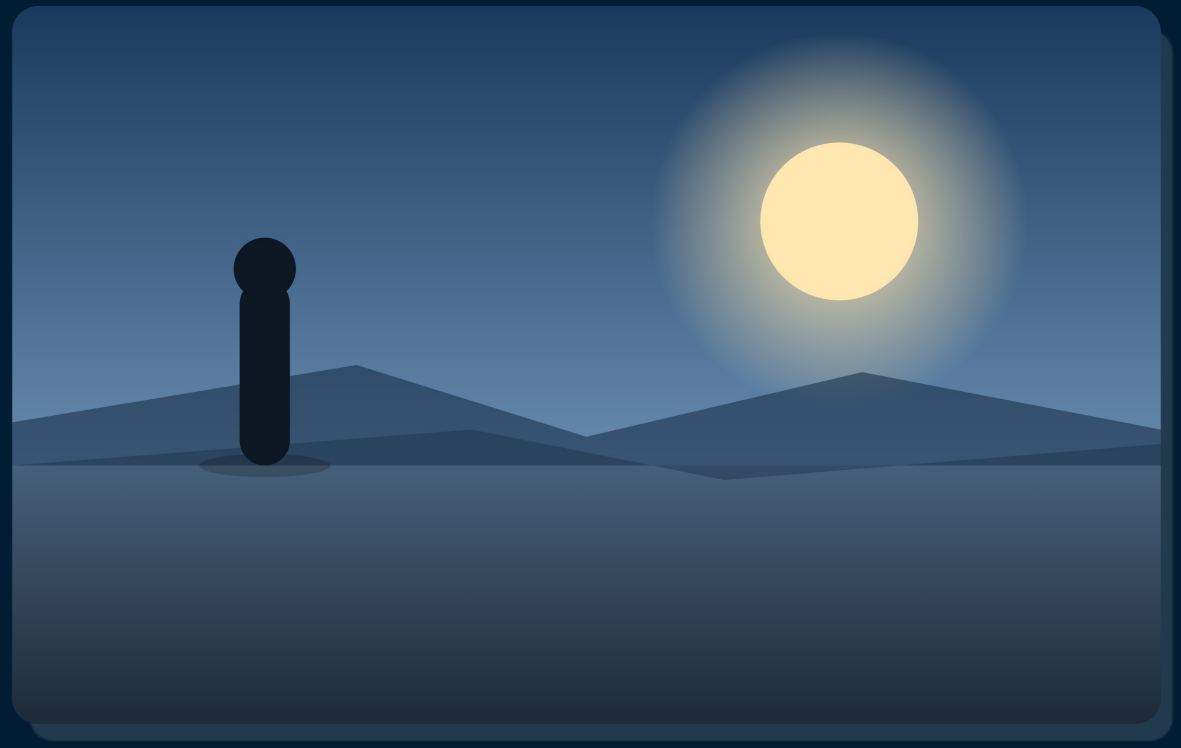

gallery mats the exhibit with a placard.

The whole asset on a matte with a placard. For diagrams and screenshots where the whitespace is the point.

statement rides the title on a scrim.

The title rides the photo on a scrim — a deliberate, editorial choice.

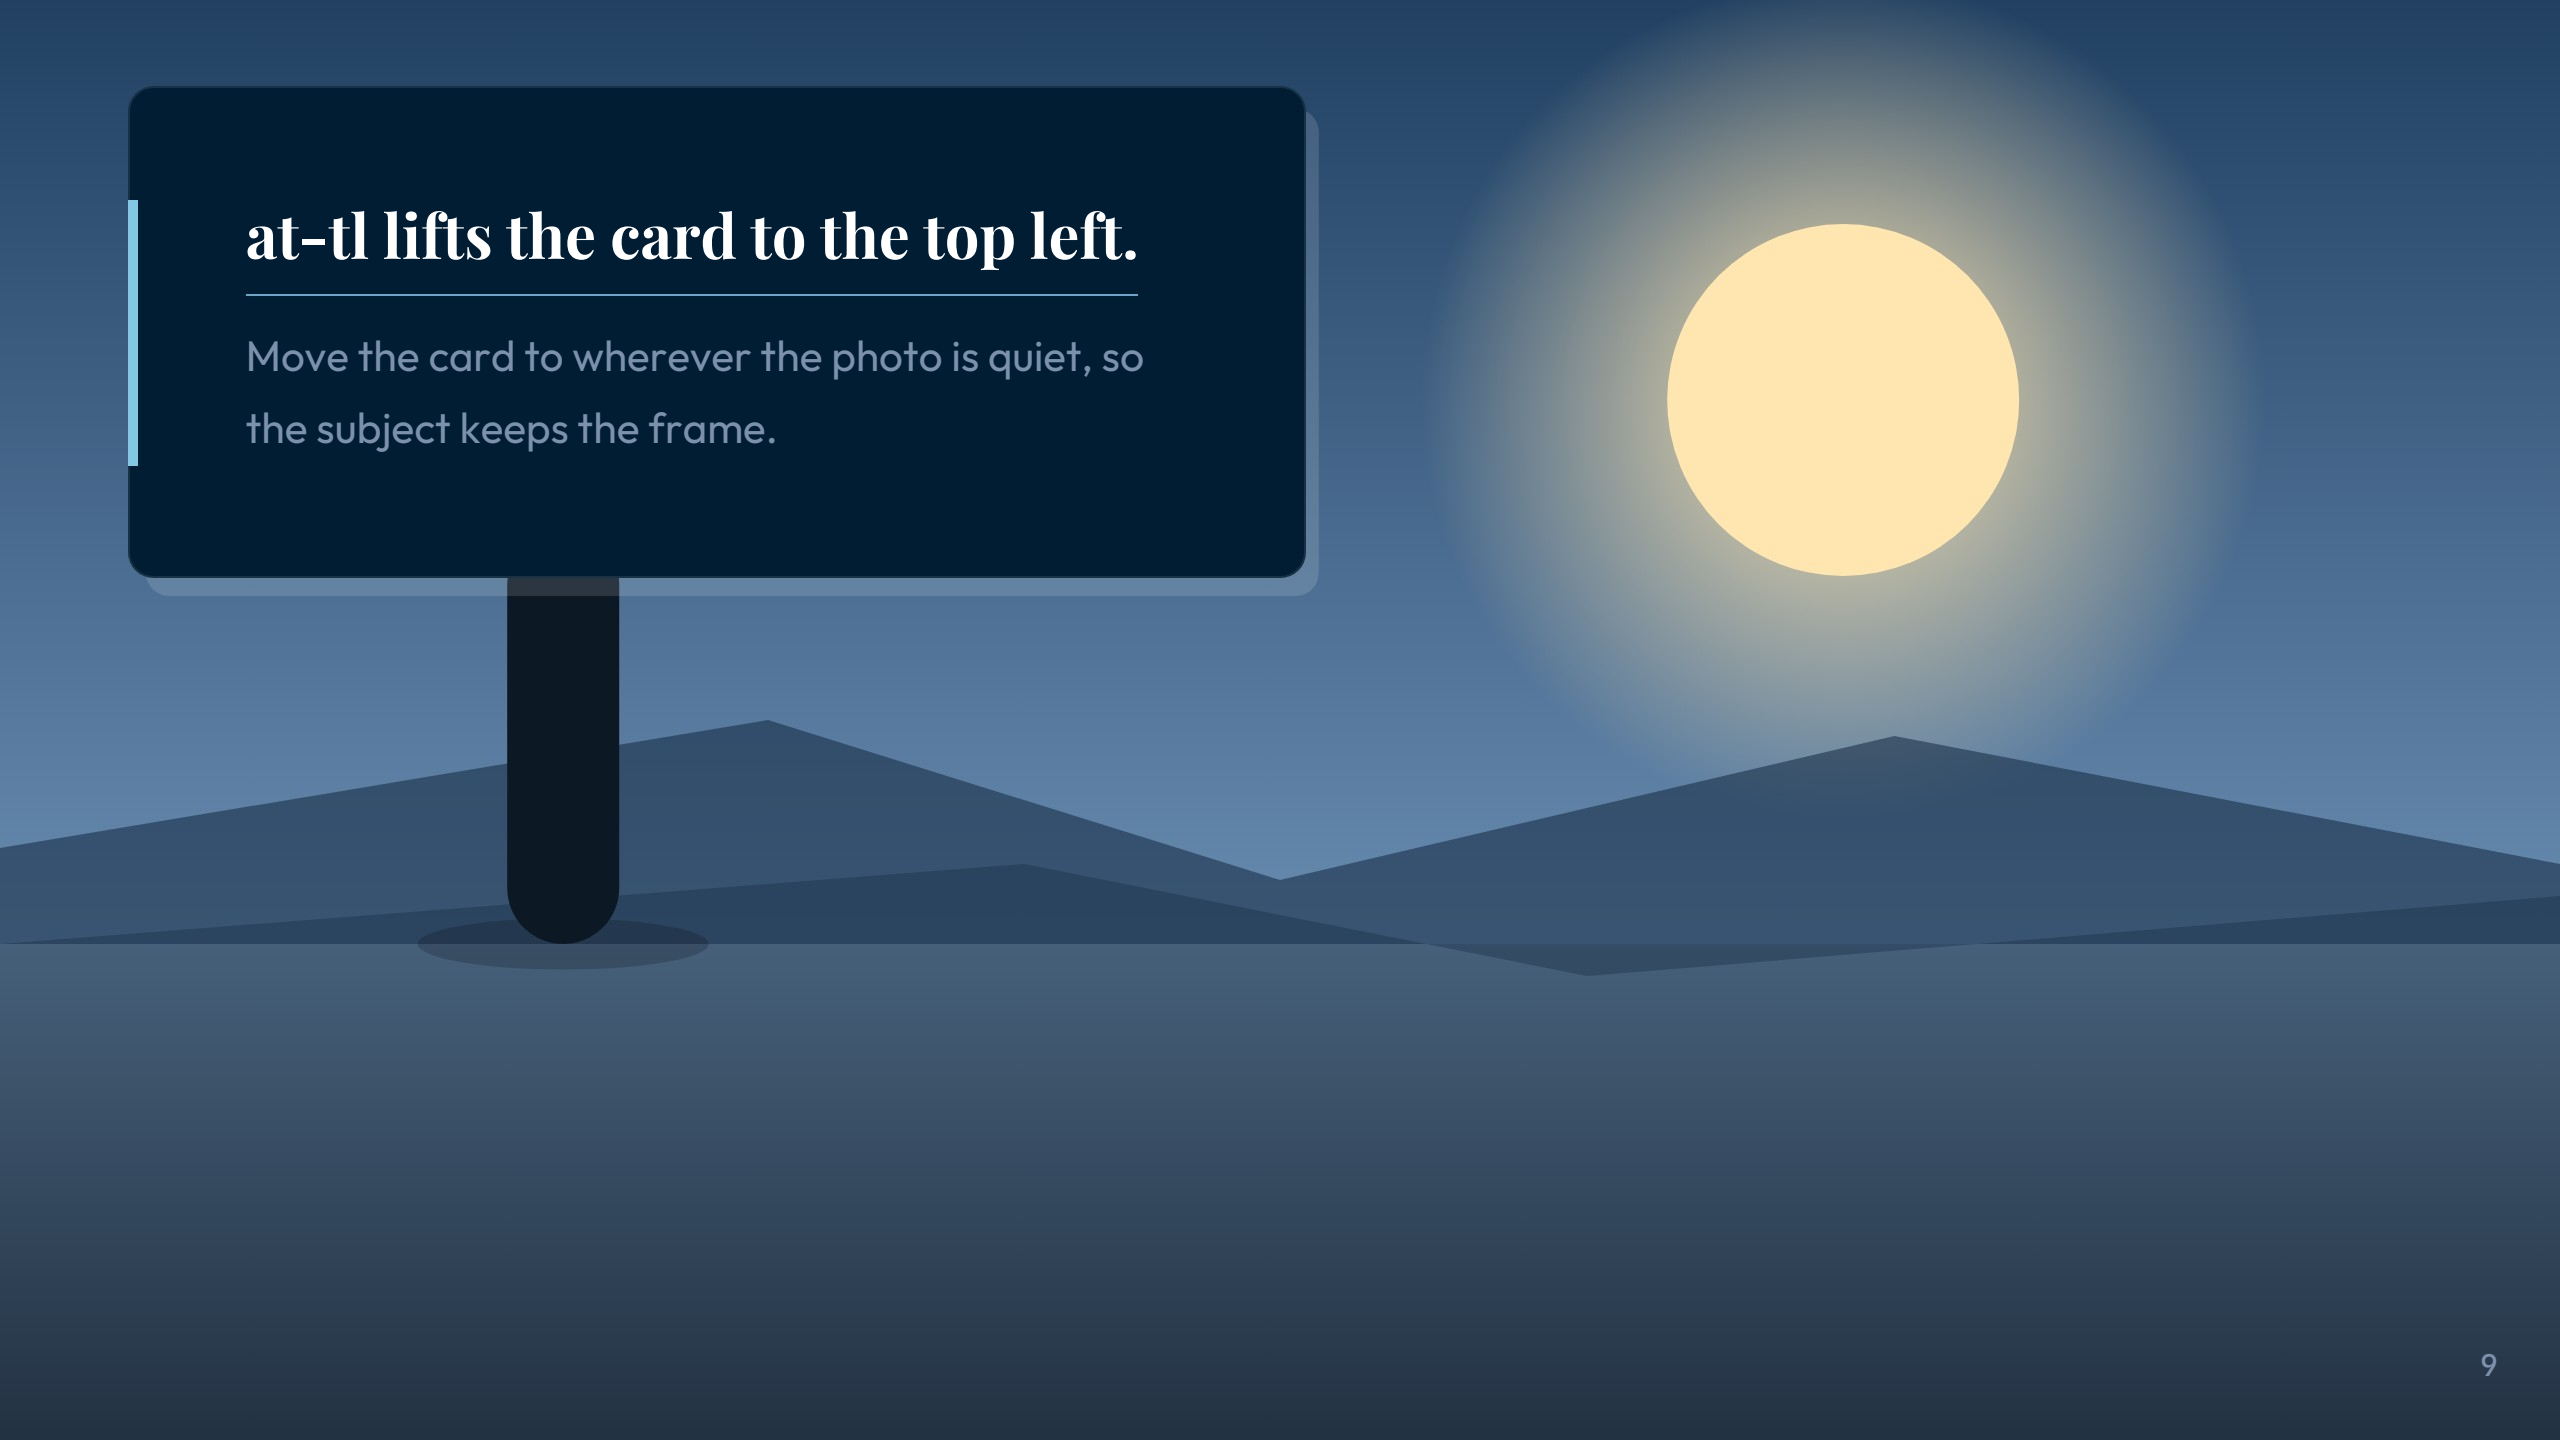

mirror lands the image on the left.

Text leads from the right; image anchors from the left.

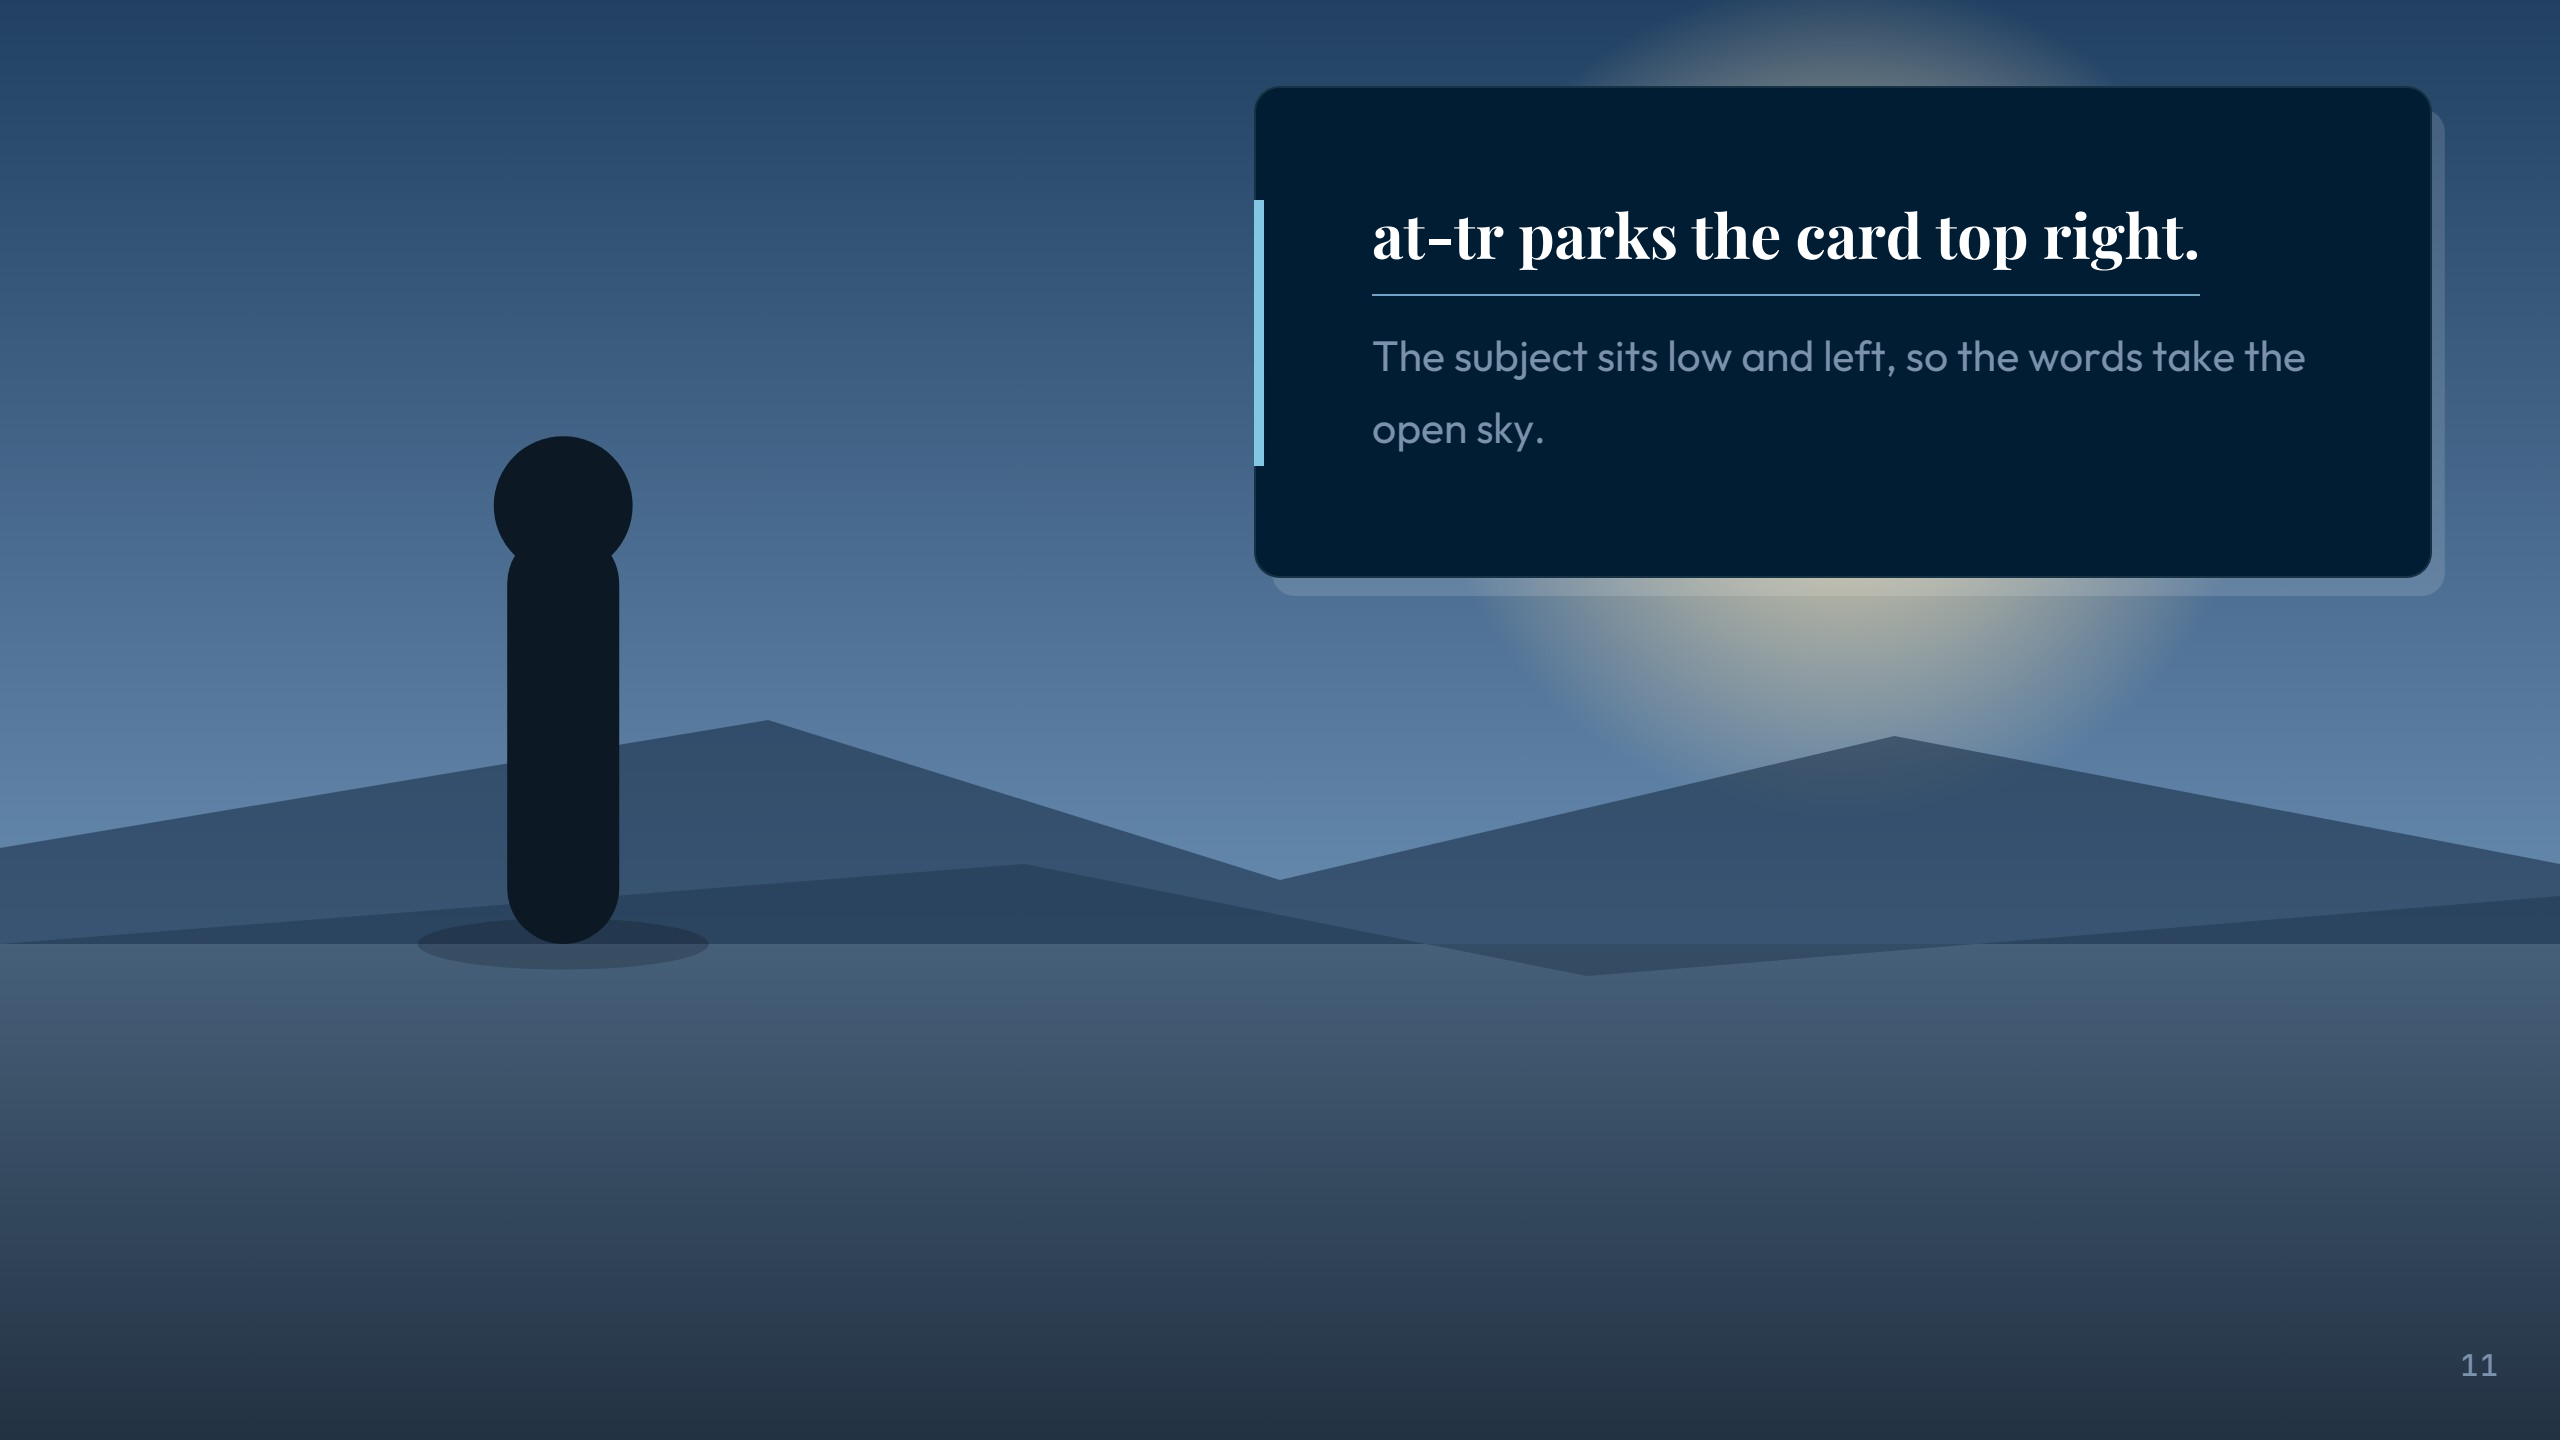

at-tl lifts the card to the top left.

Move the card to wherever the photo is quiet, so the subject keeps the frame.

at-top centers the title up high.

The scrim follows the words to the top edge.

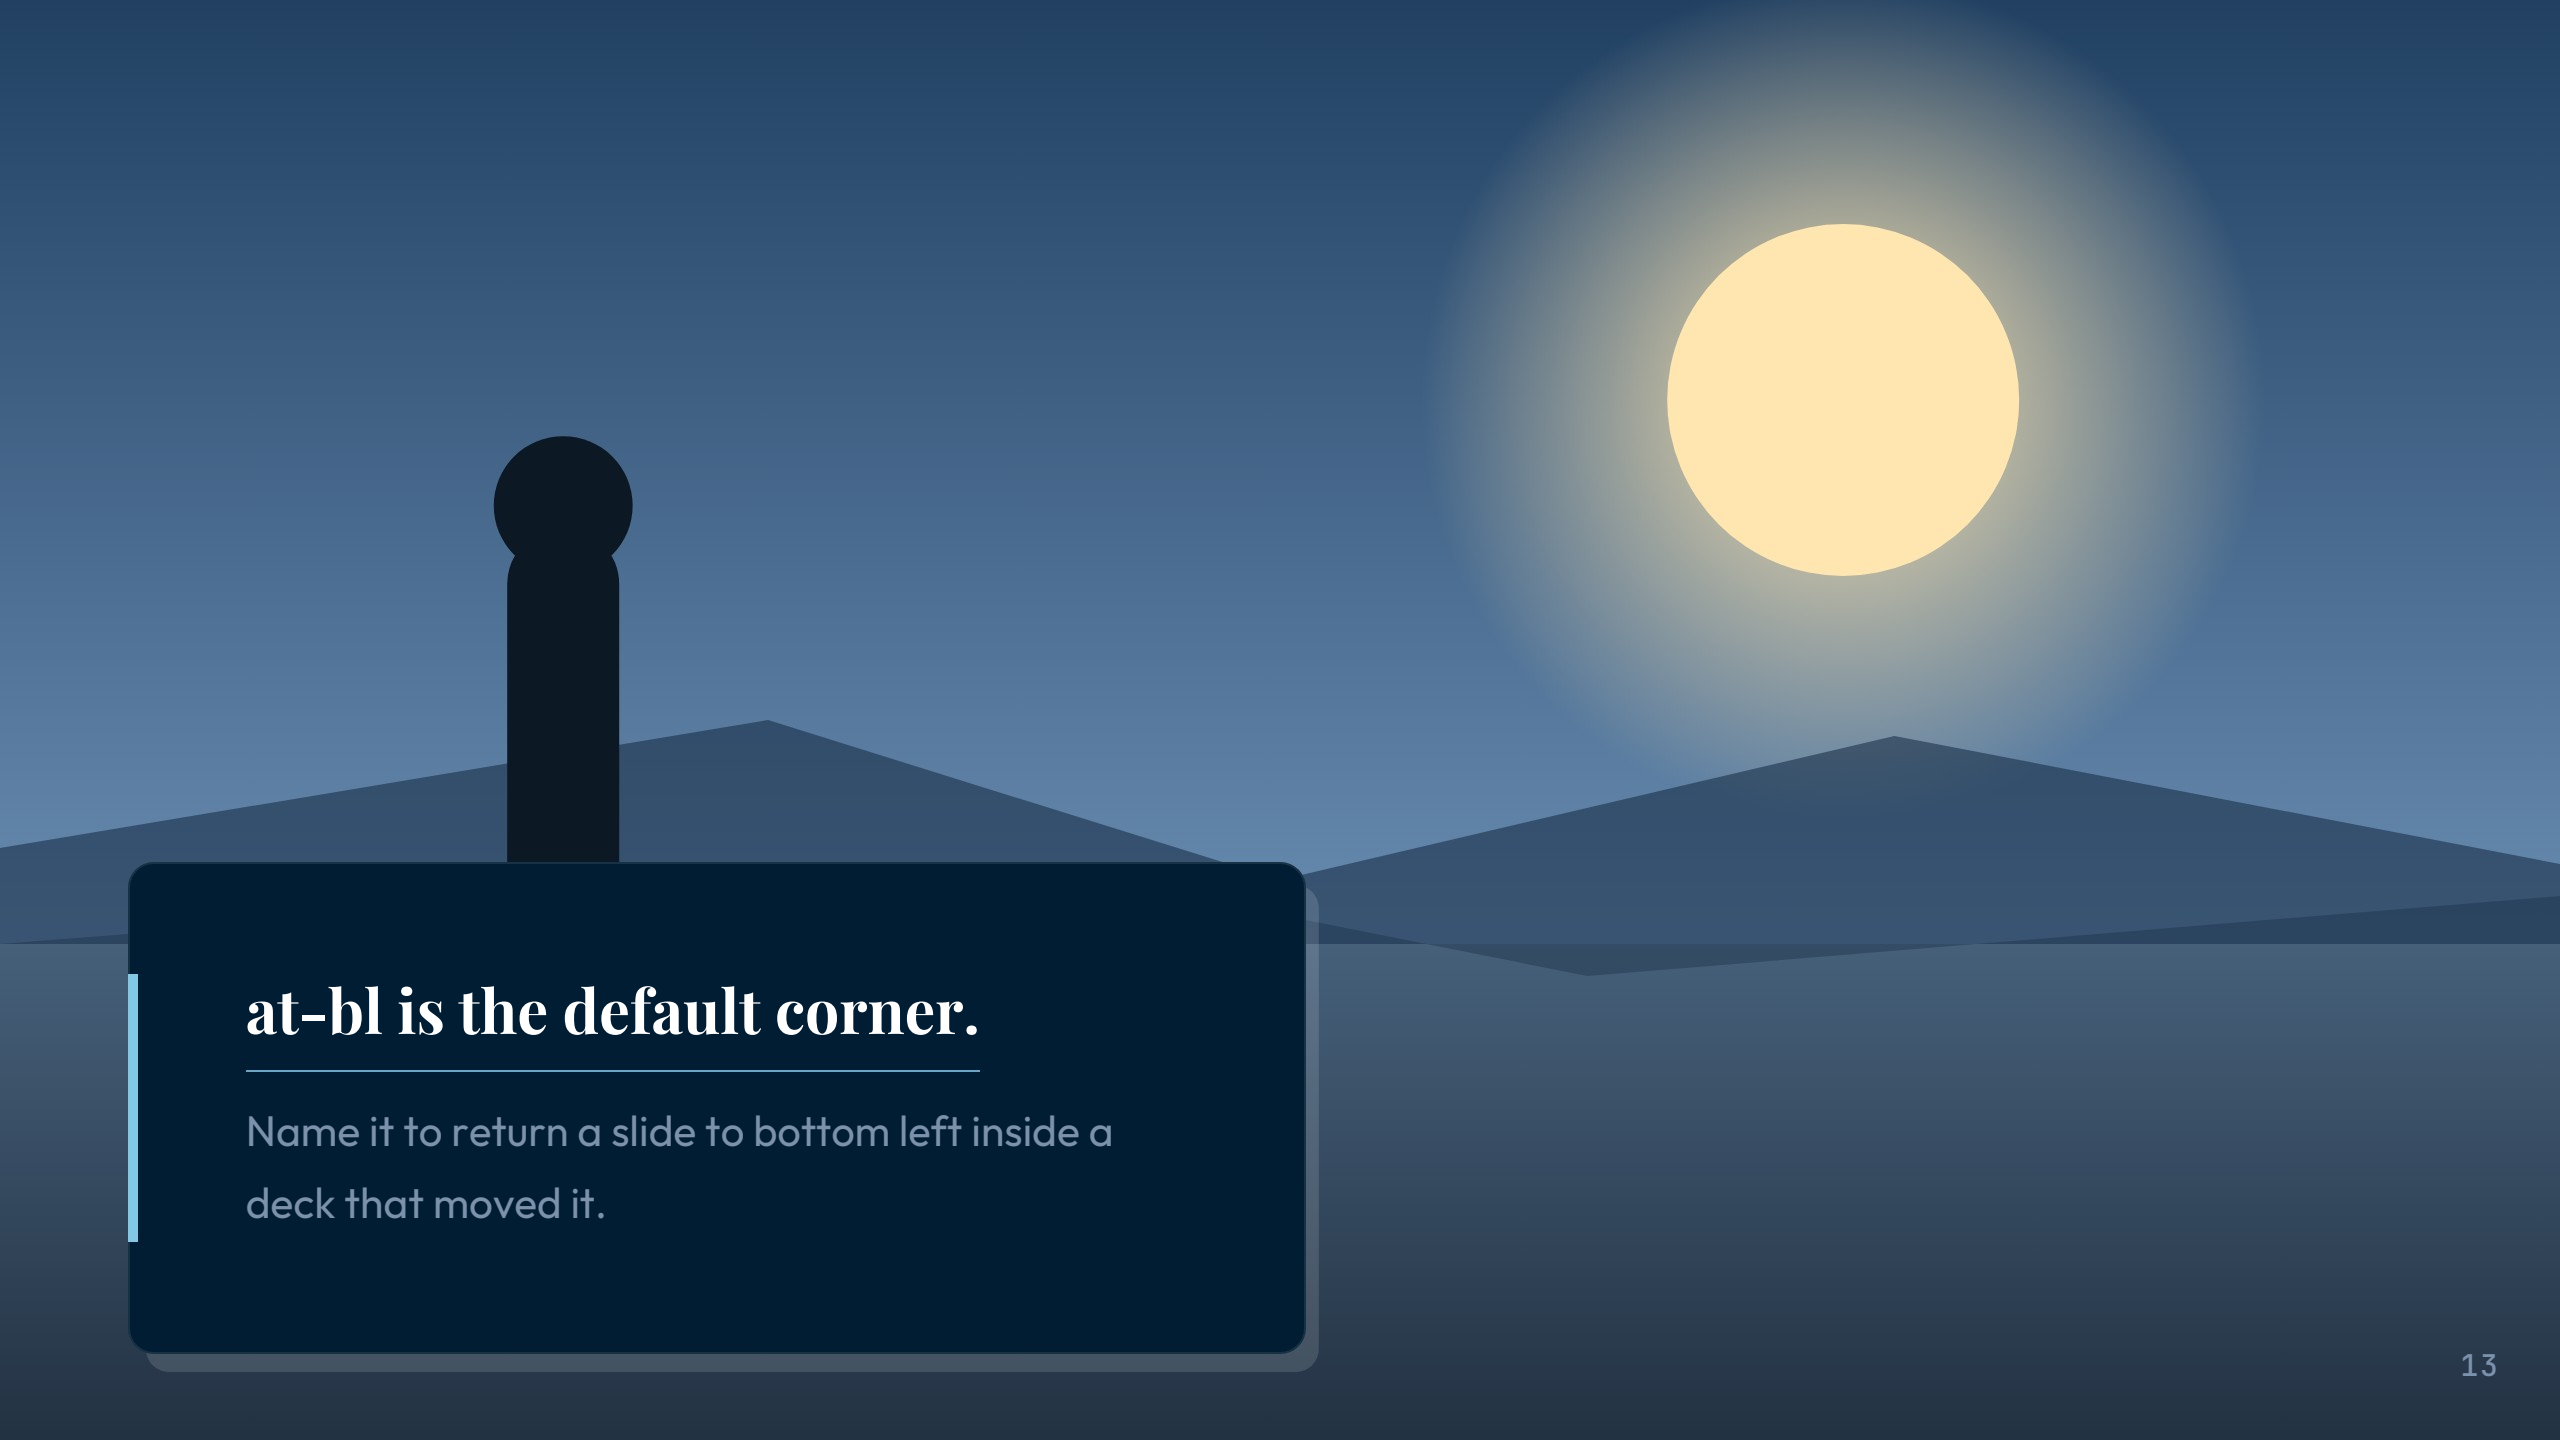

at-tr parks the card top right.

The subject sits low and left, so the words take the open sky.

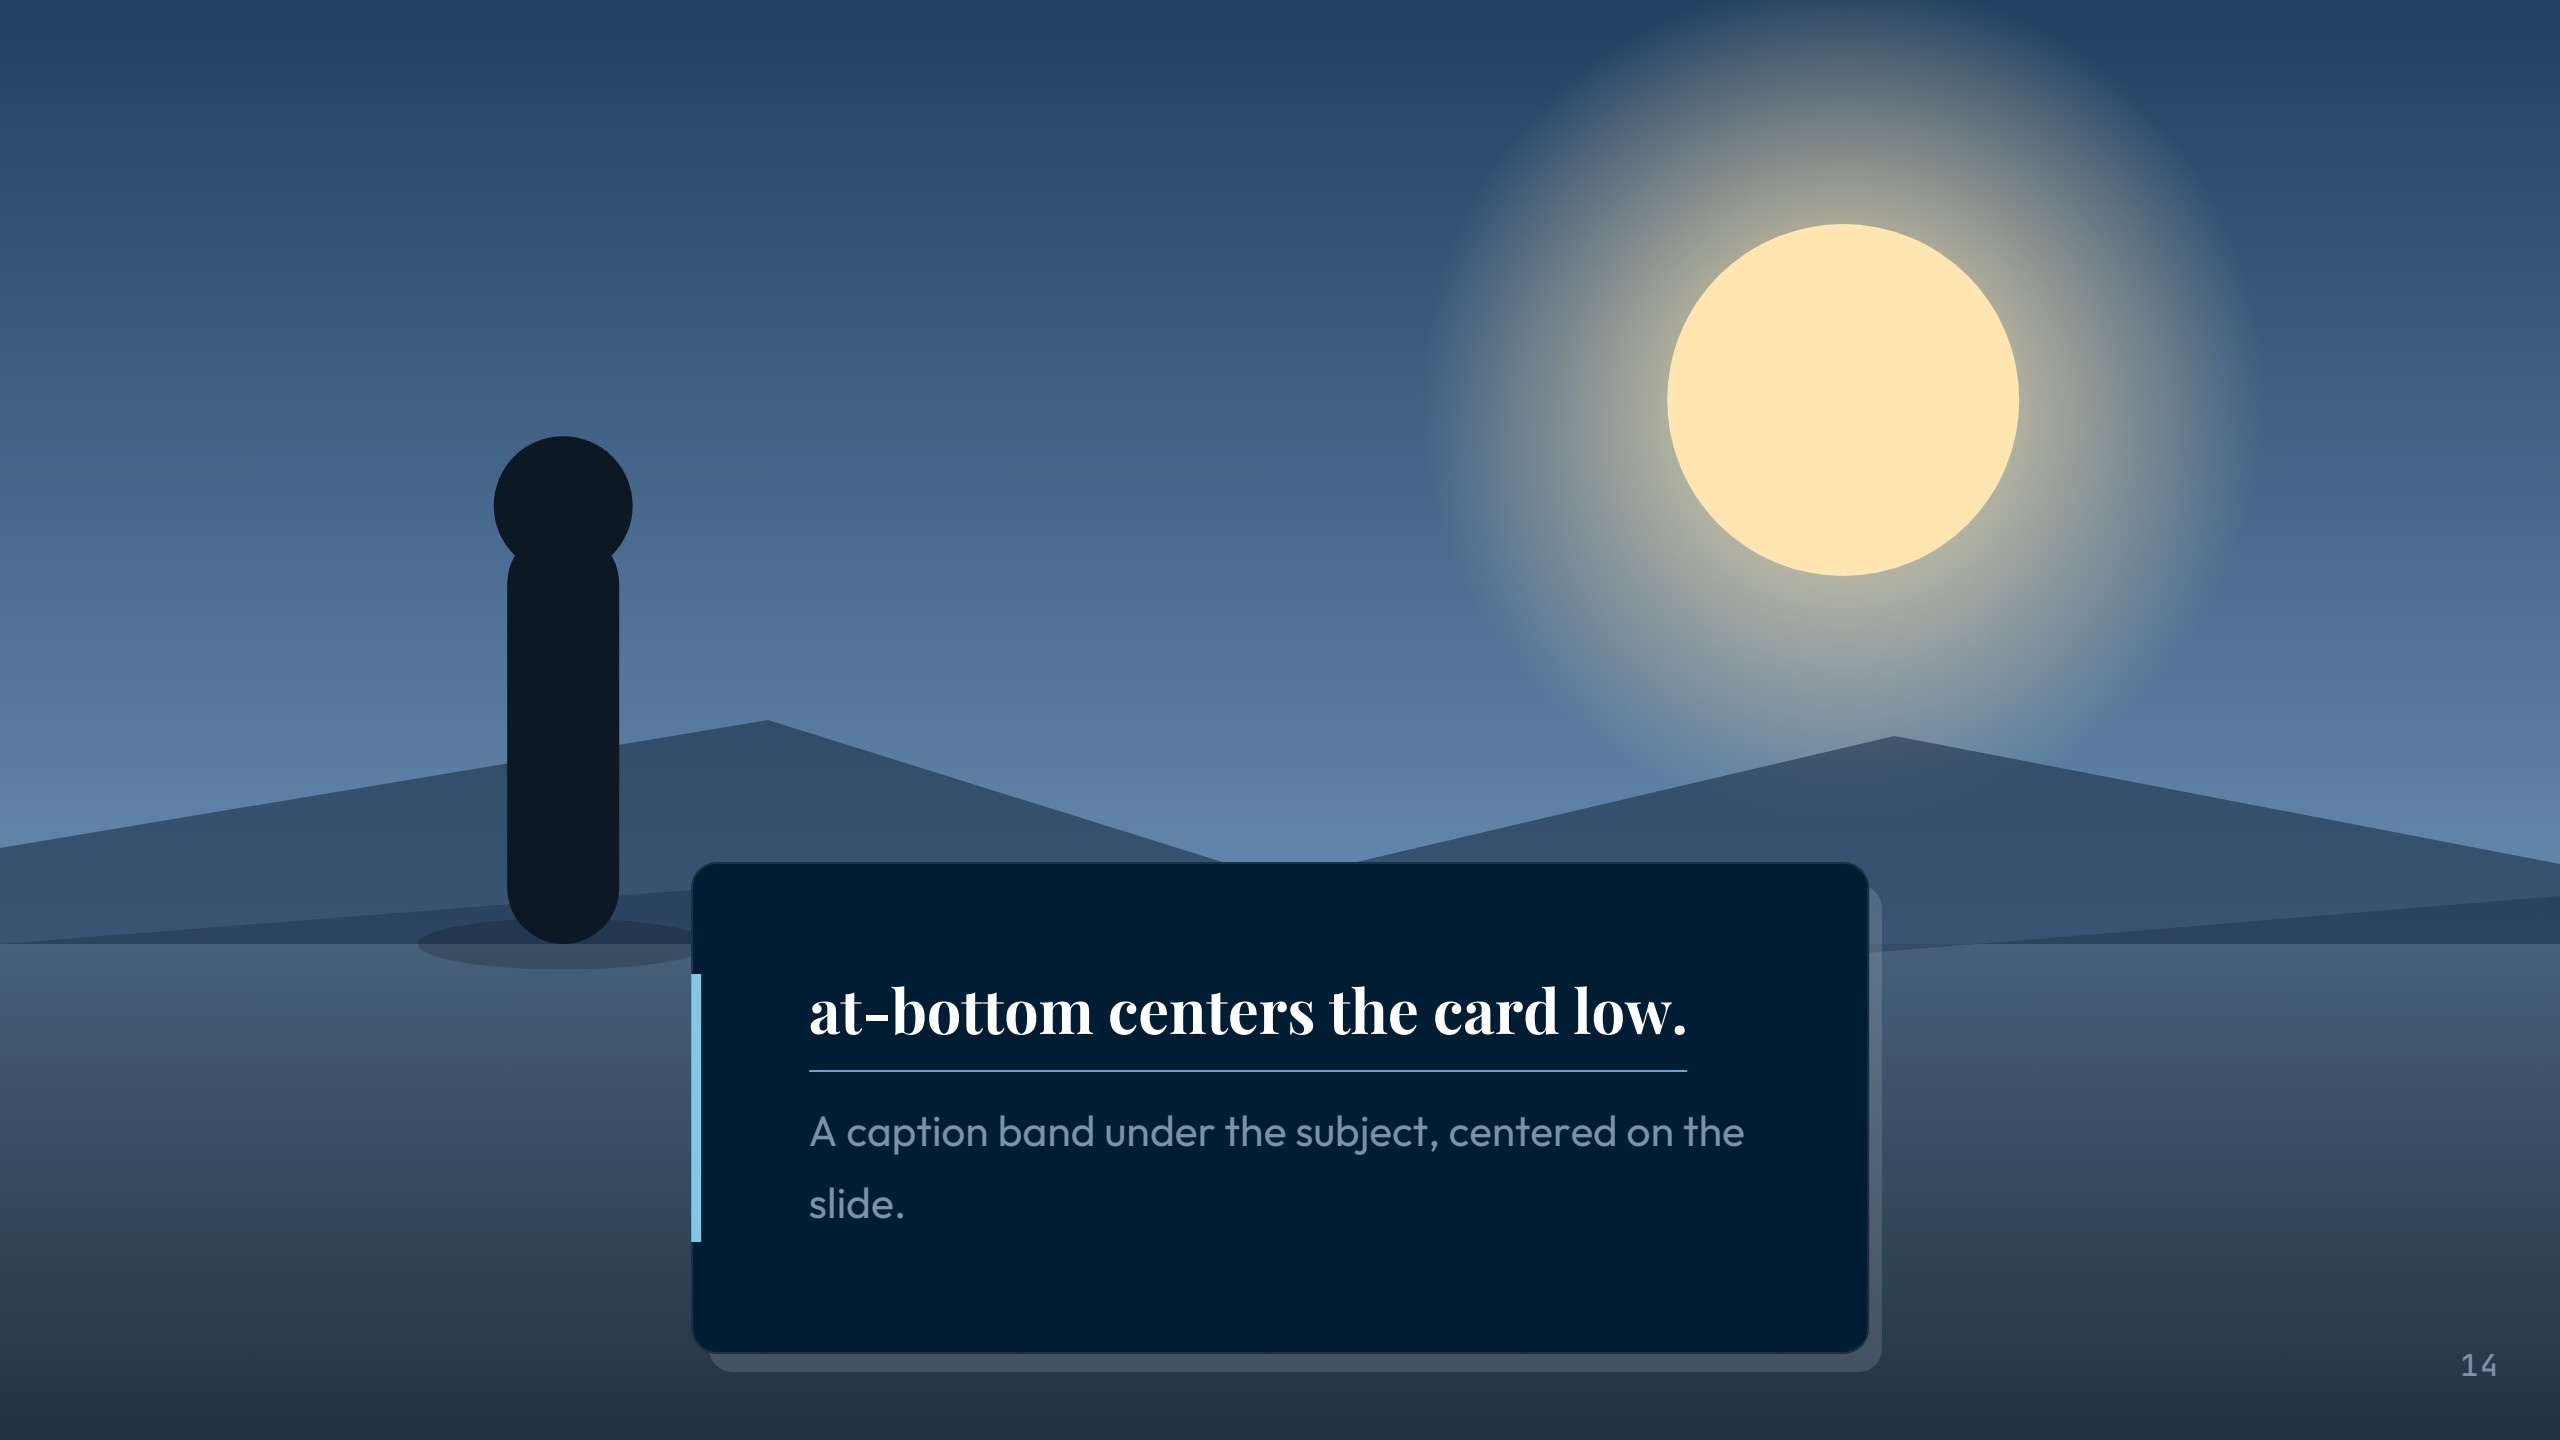

at-center puts the title dead center.

A radial scrim darkens only the middle.

at-bl is the default corner.

Name it to return a slide to bottom left inside a deck that moved it.

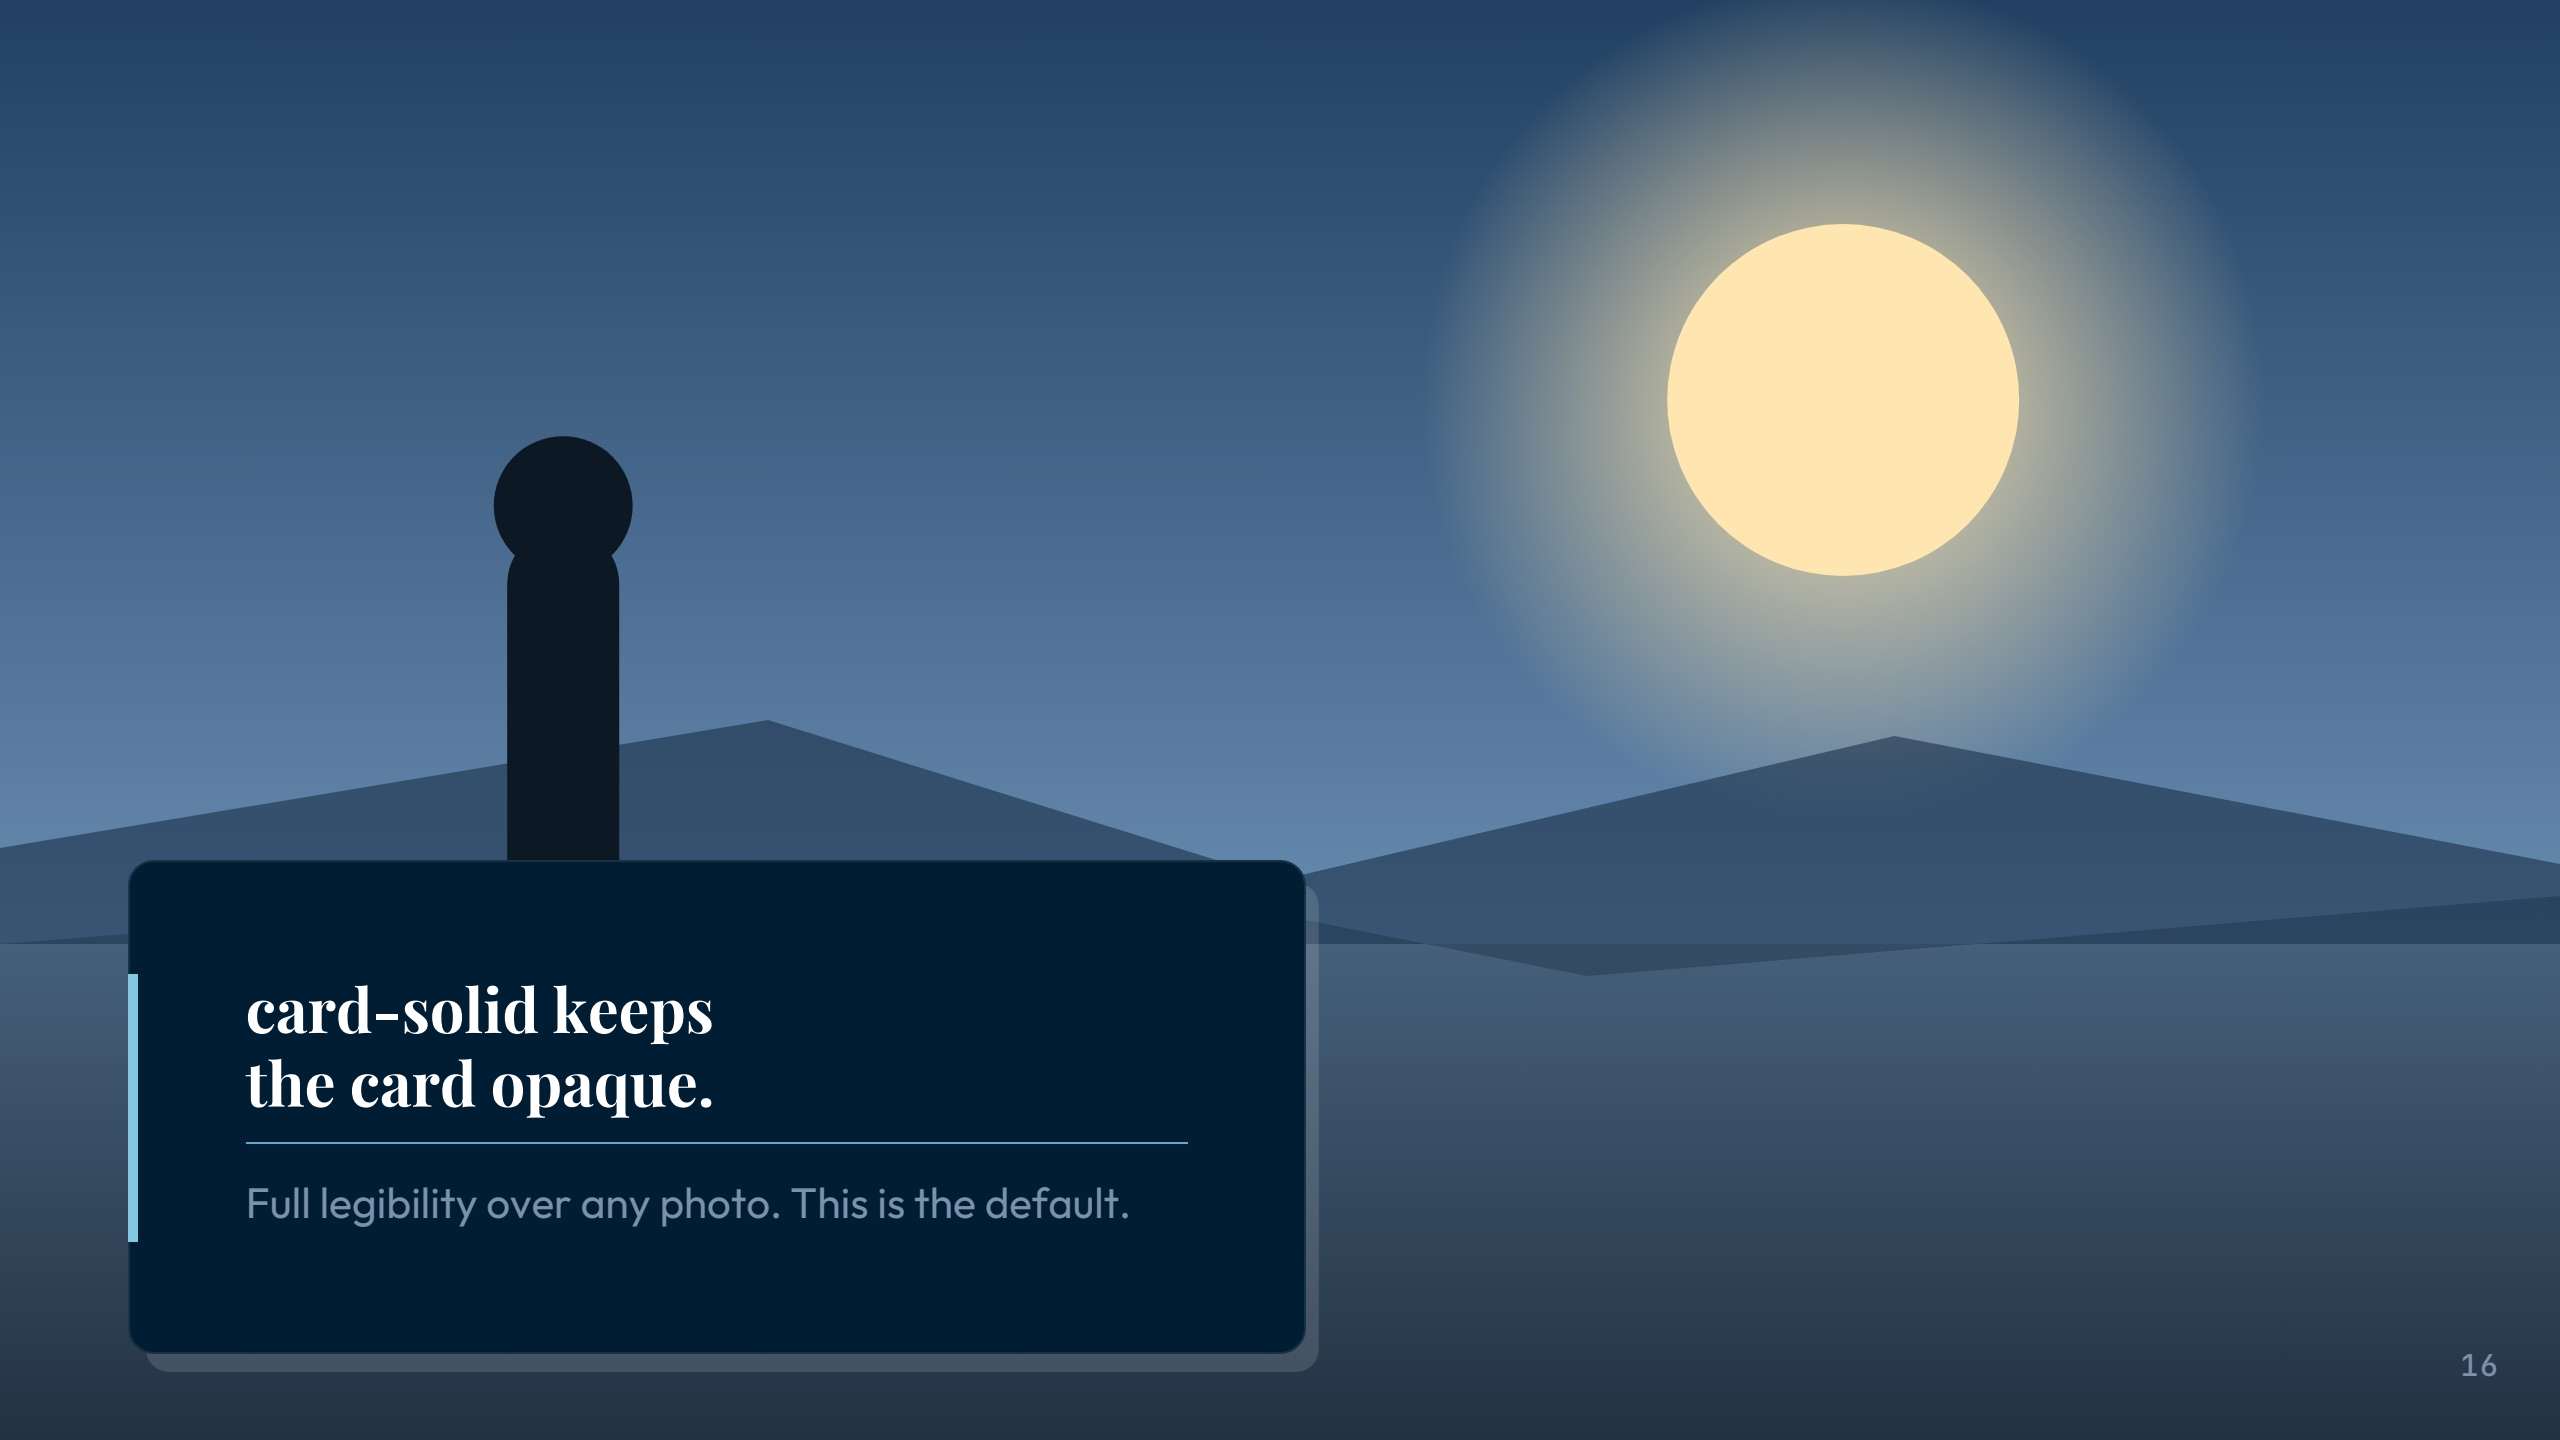

at-bottom centers the card low.

A caption band under the subject, centered on the slide.

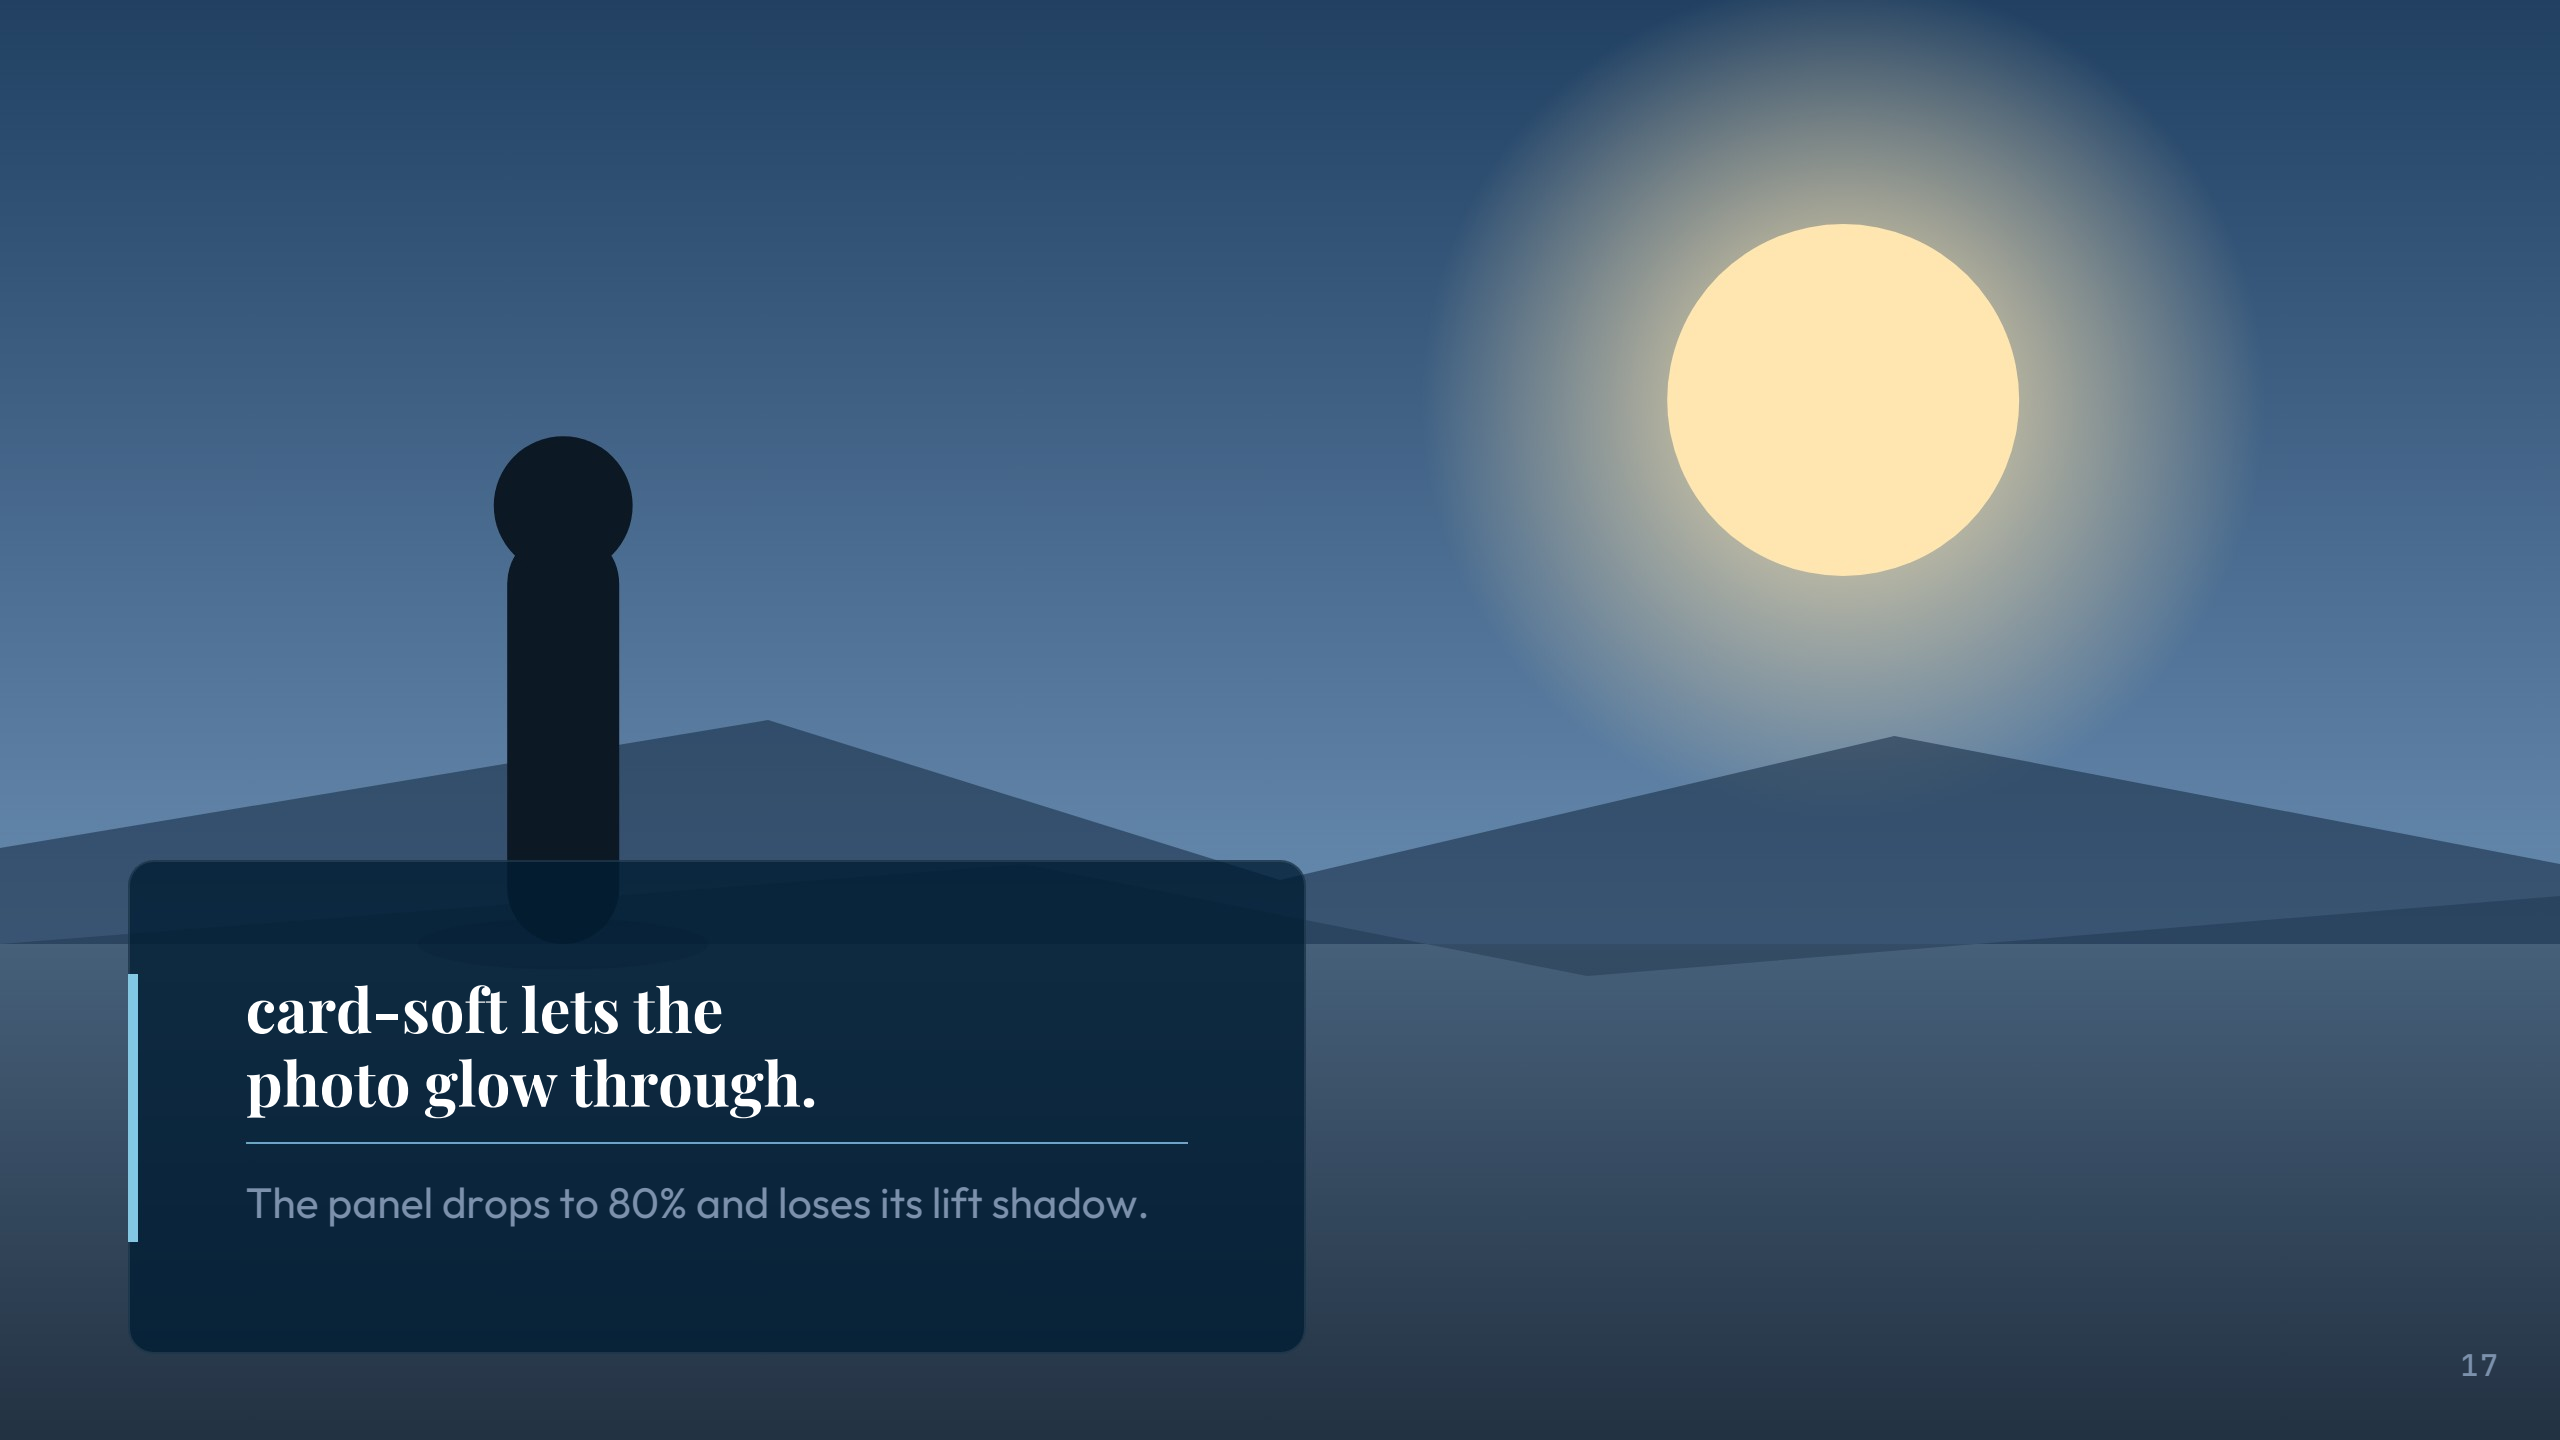

at-br anchors the title bottom right.

The scrim flips to darken the right side.

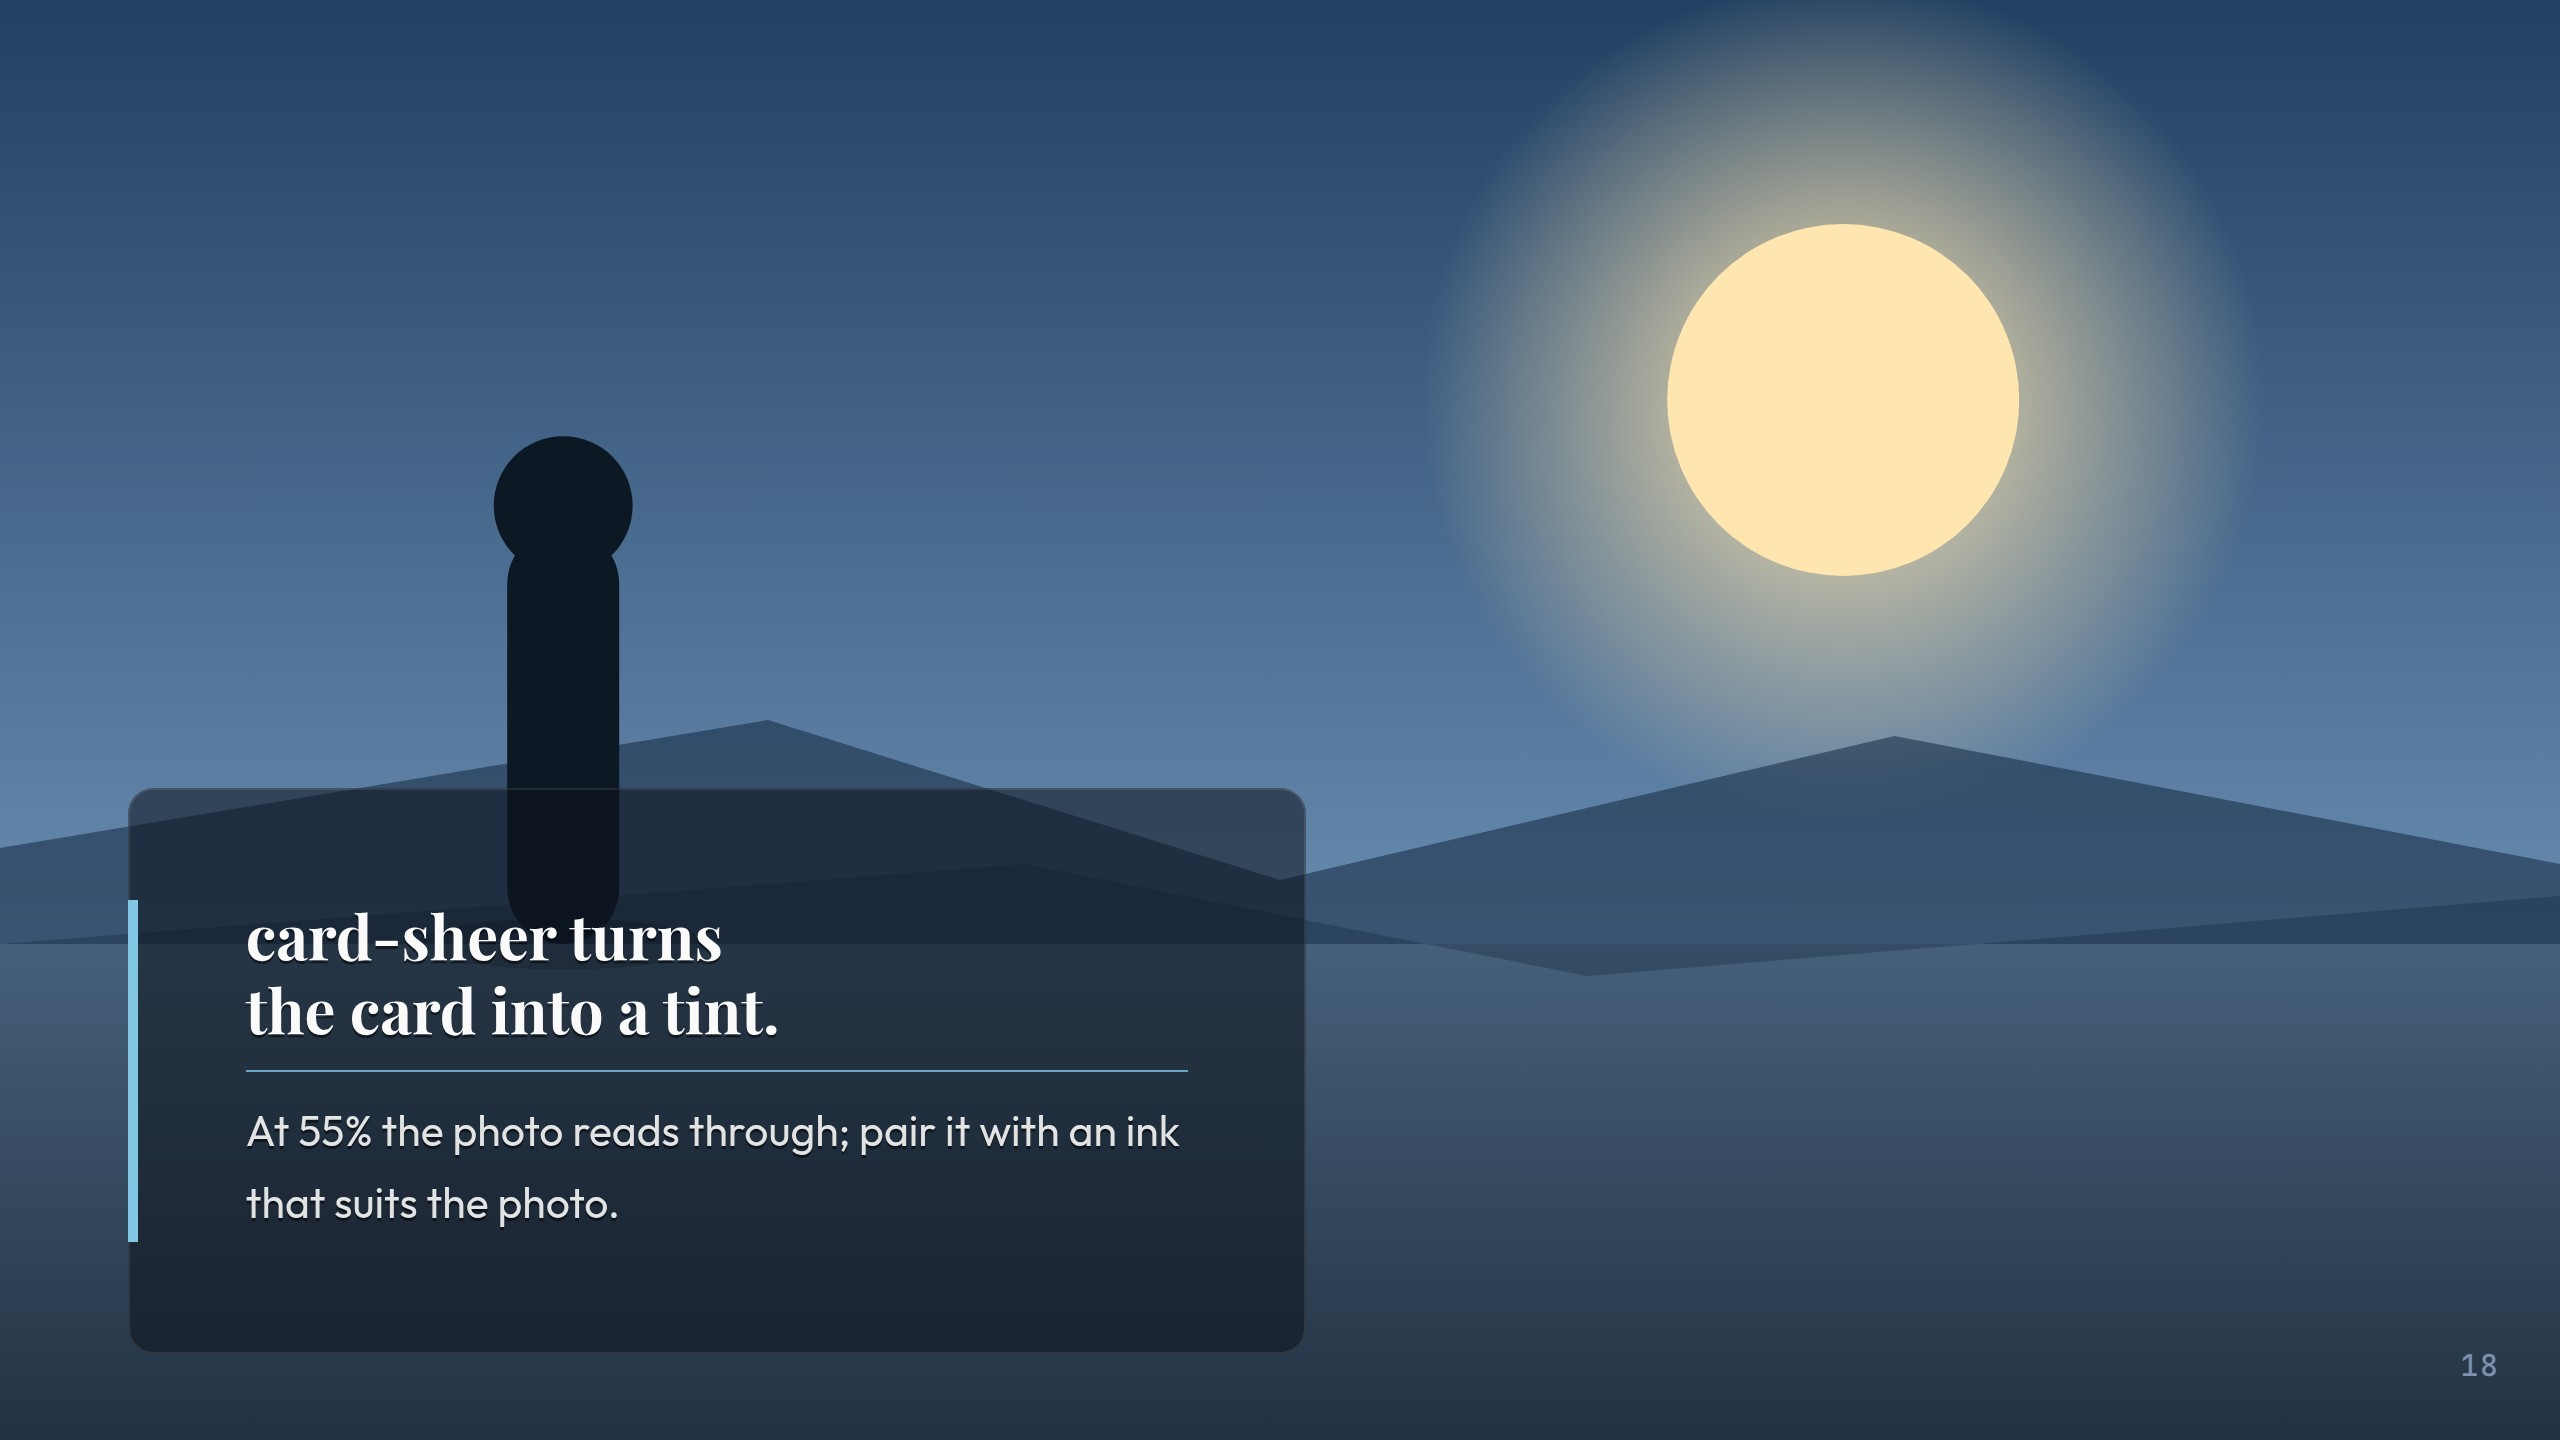

card-solid keeps the card opaque.

Full legibility over any photo. This is the default.

card-soft lets the photo glow through.

The panel drops to 80% and loses its lift shadow.

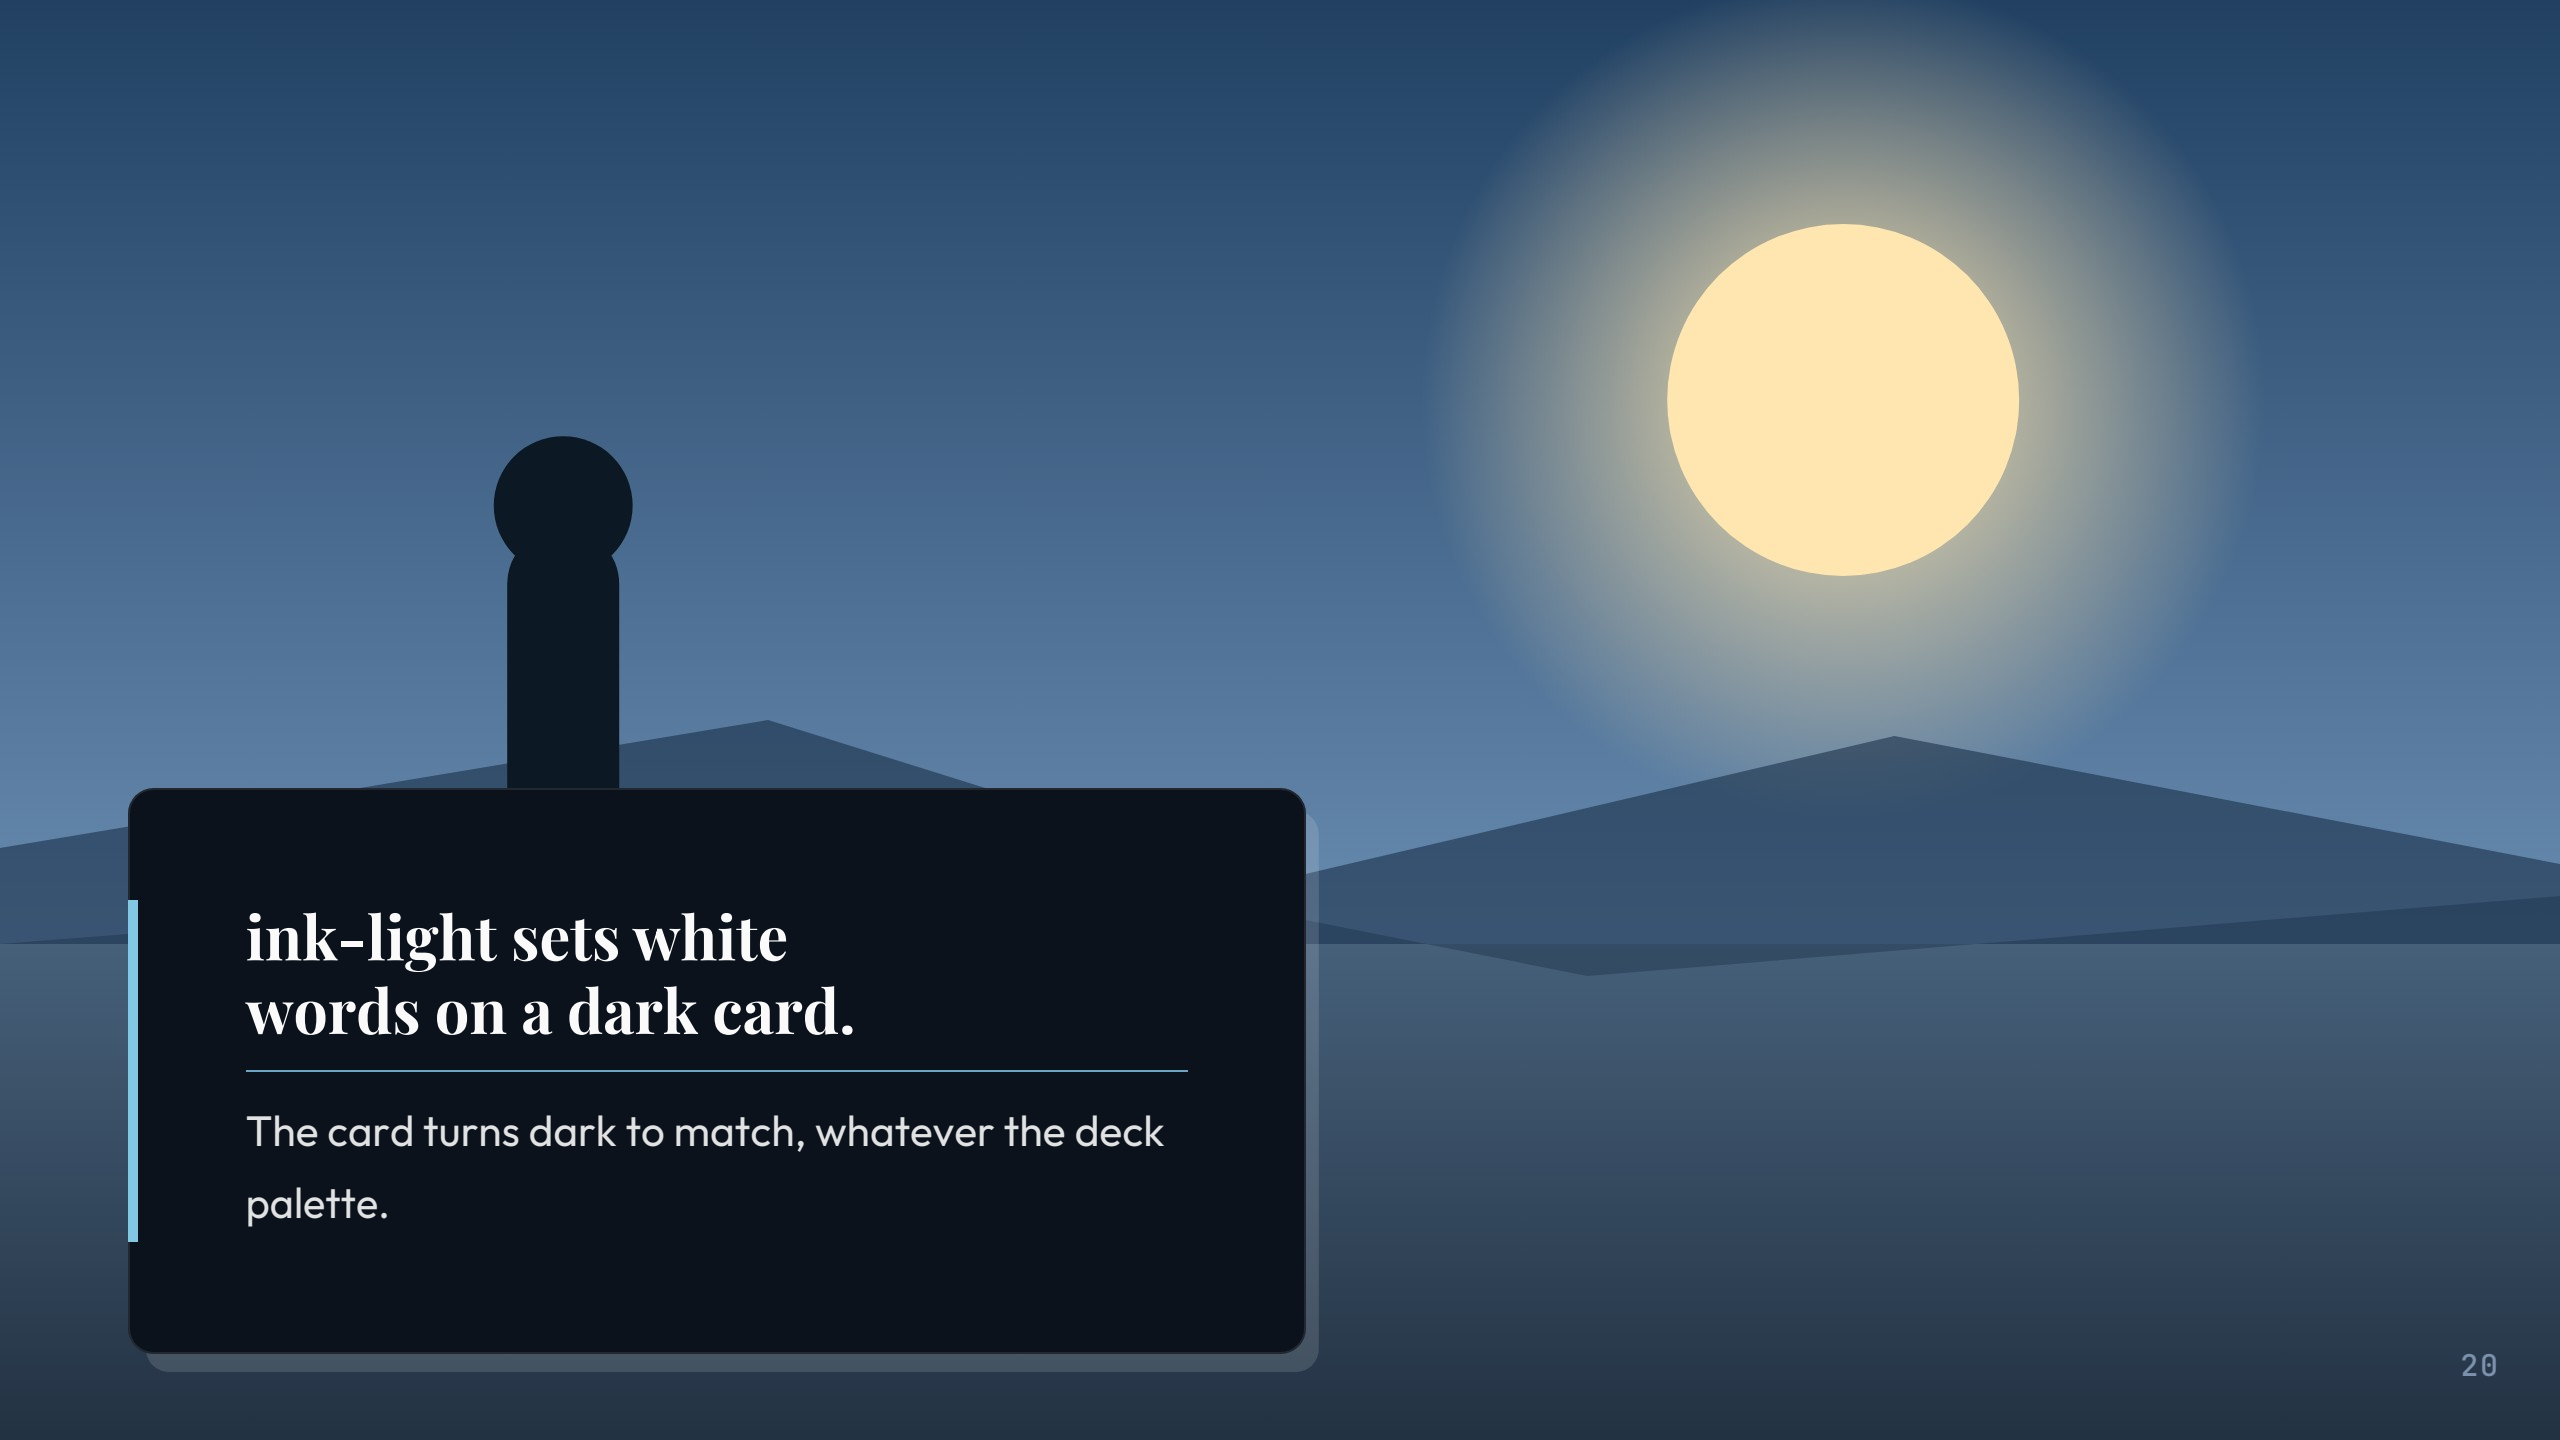

card-sheer turns the card into a tint.

At 55% the photo reads through; pair it with an ink that suits the photo.

card-clear drops the scrim.

Only for a photo with a calm, dark patch where the words land.

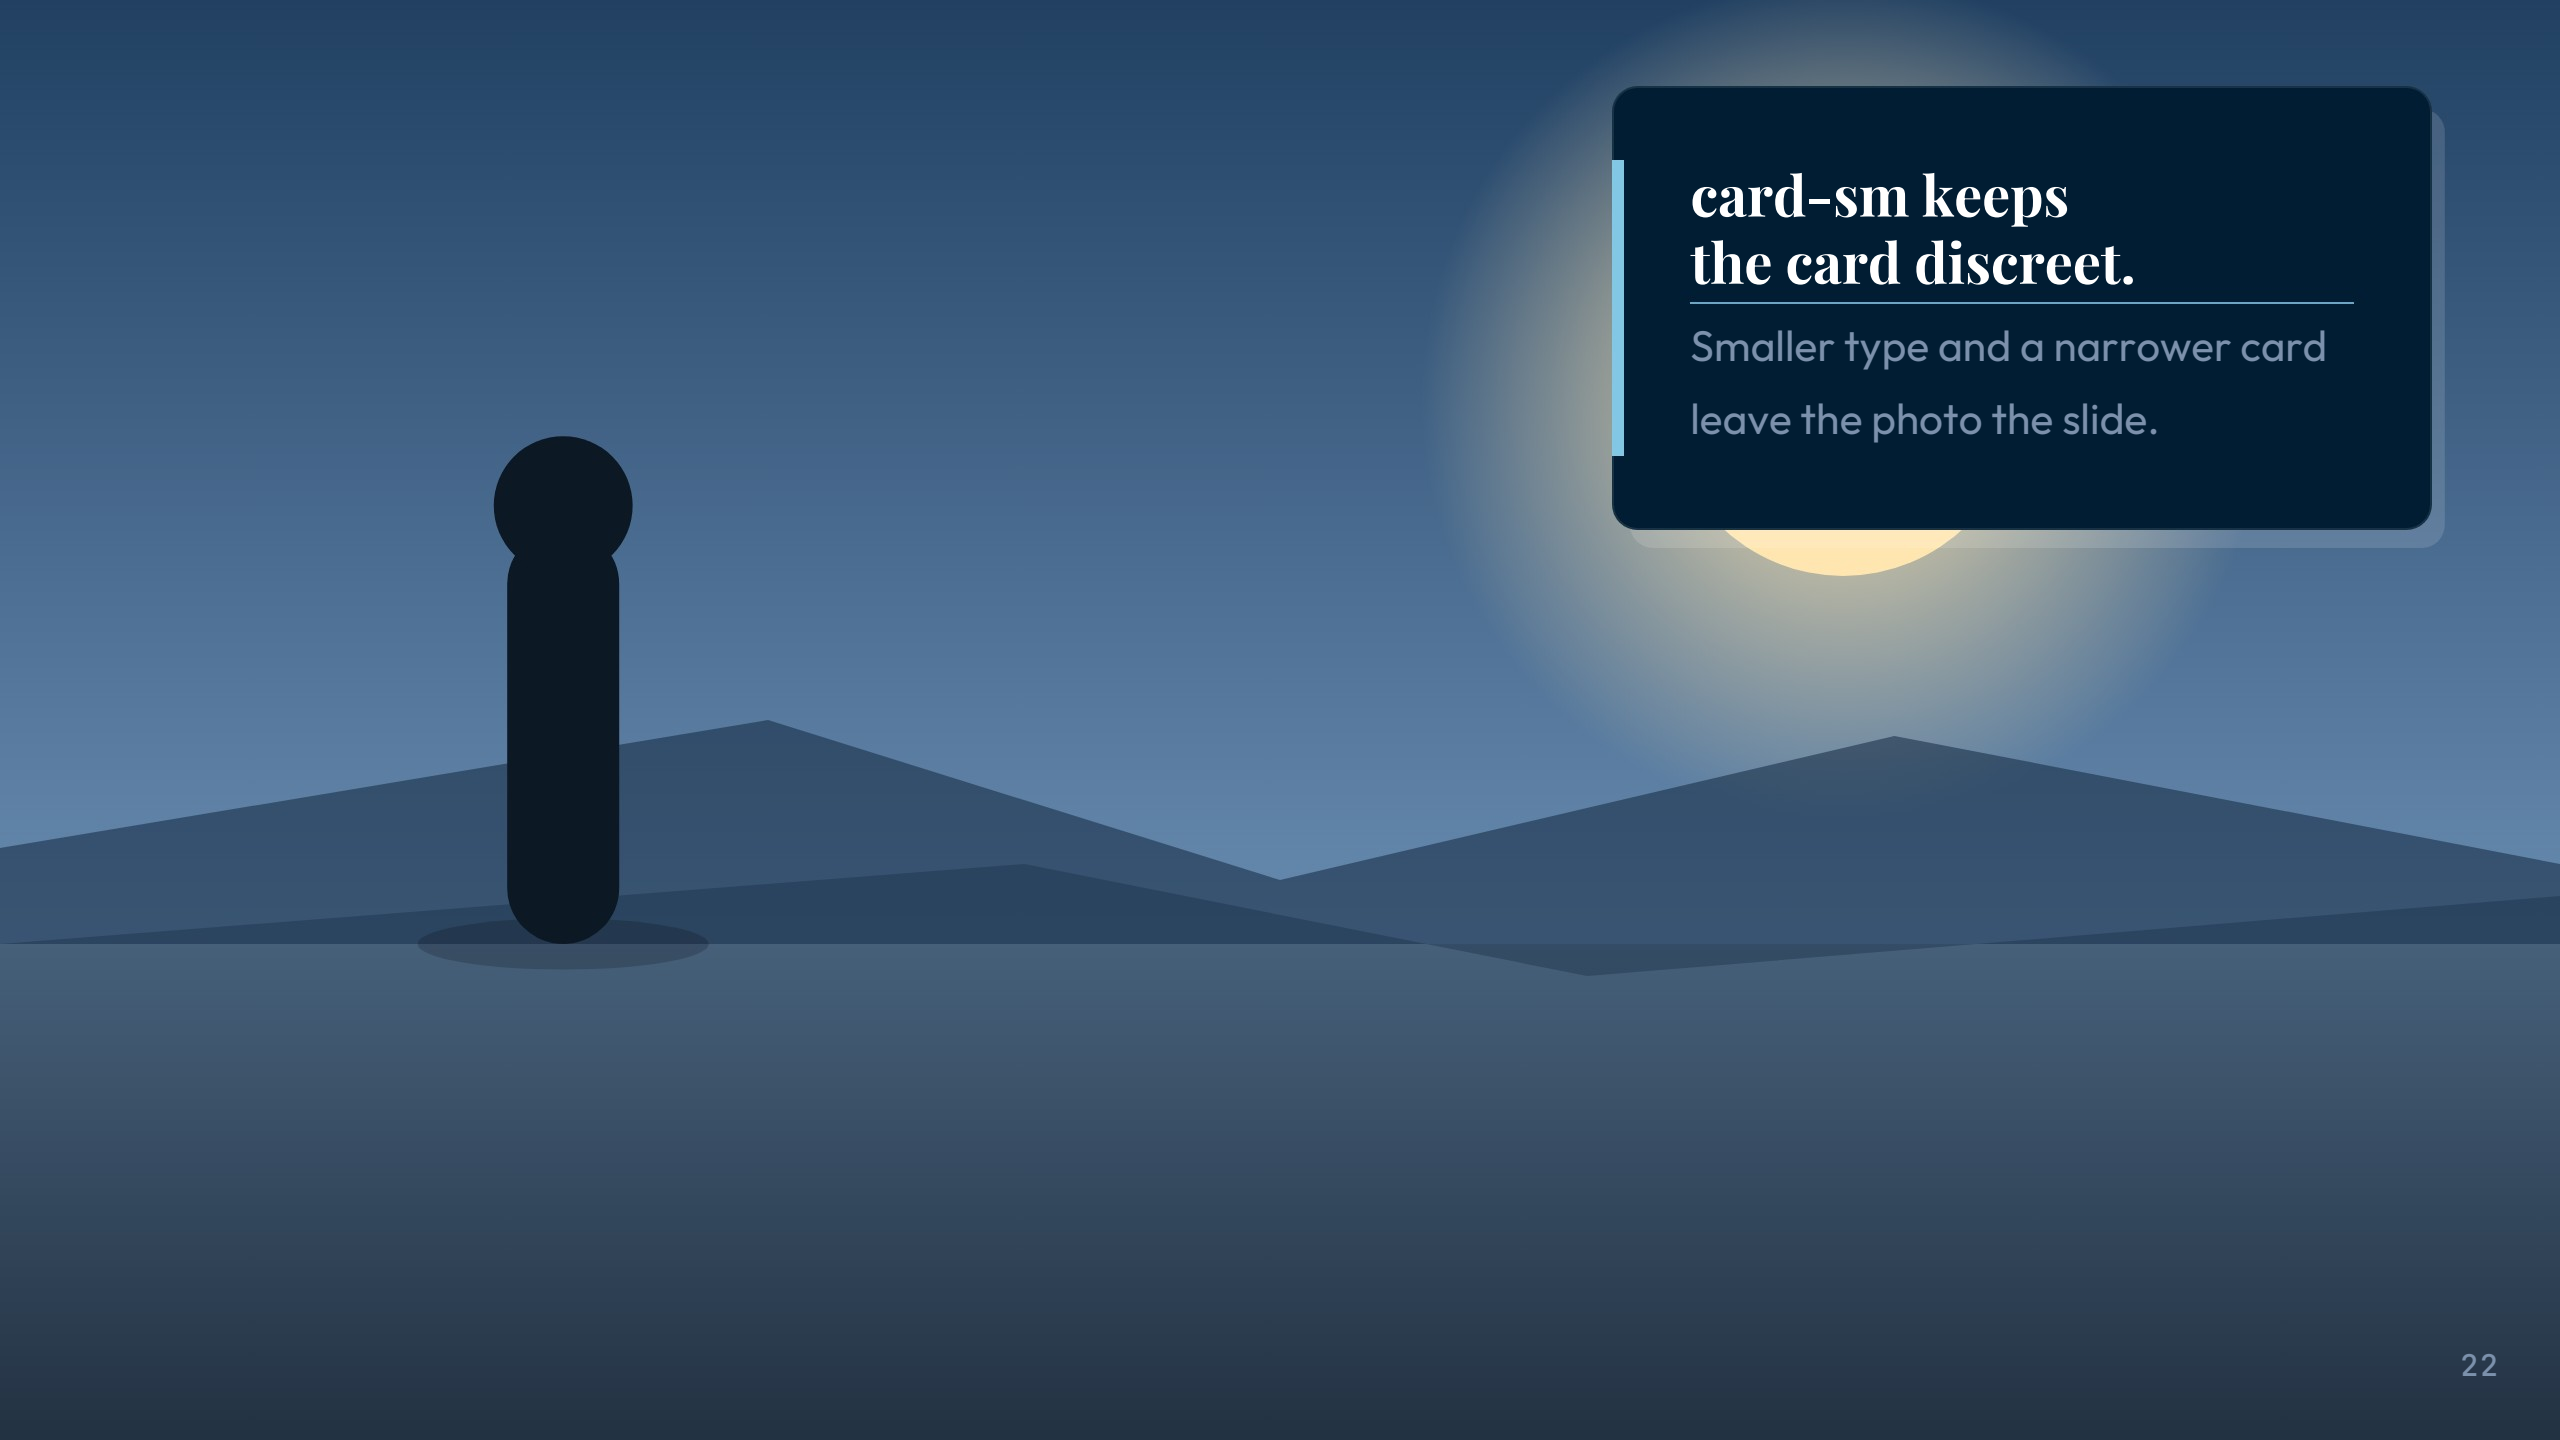

ink-light sets white words on a dark card.

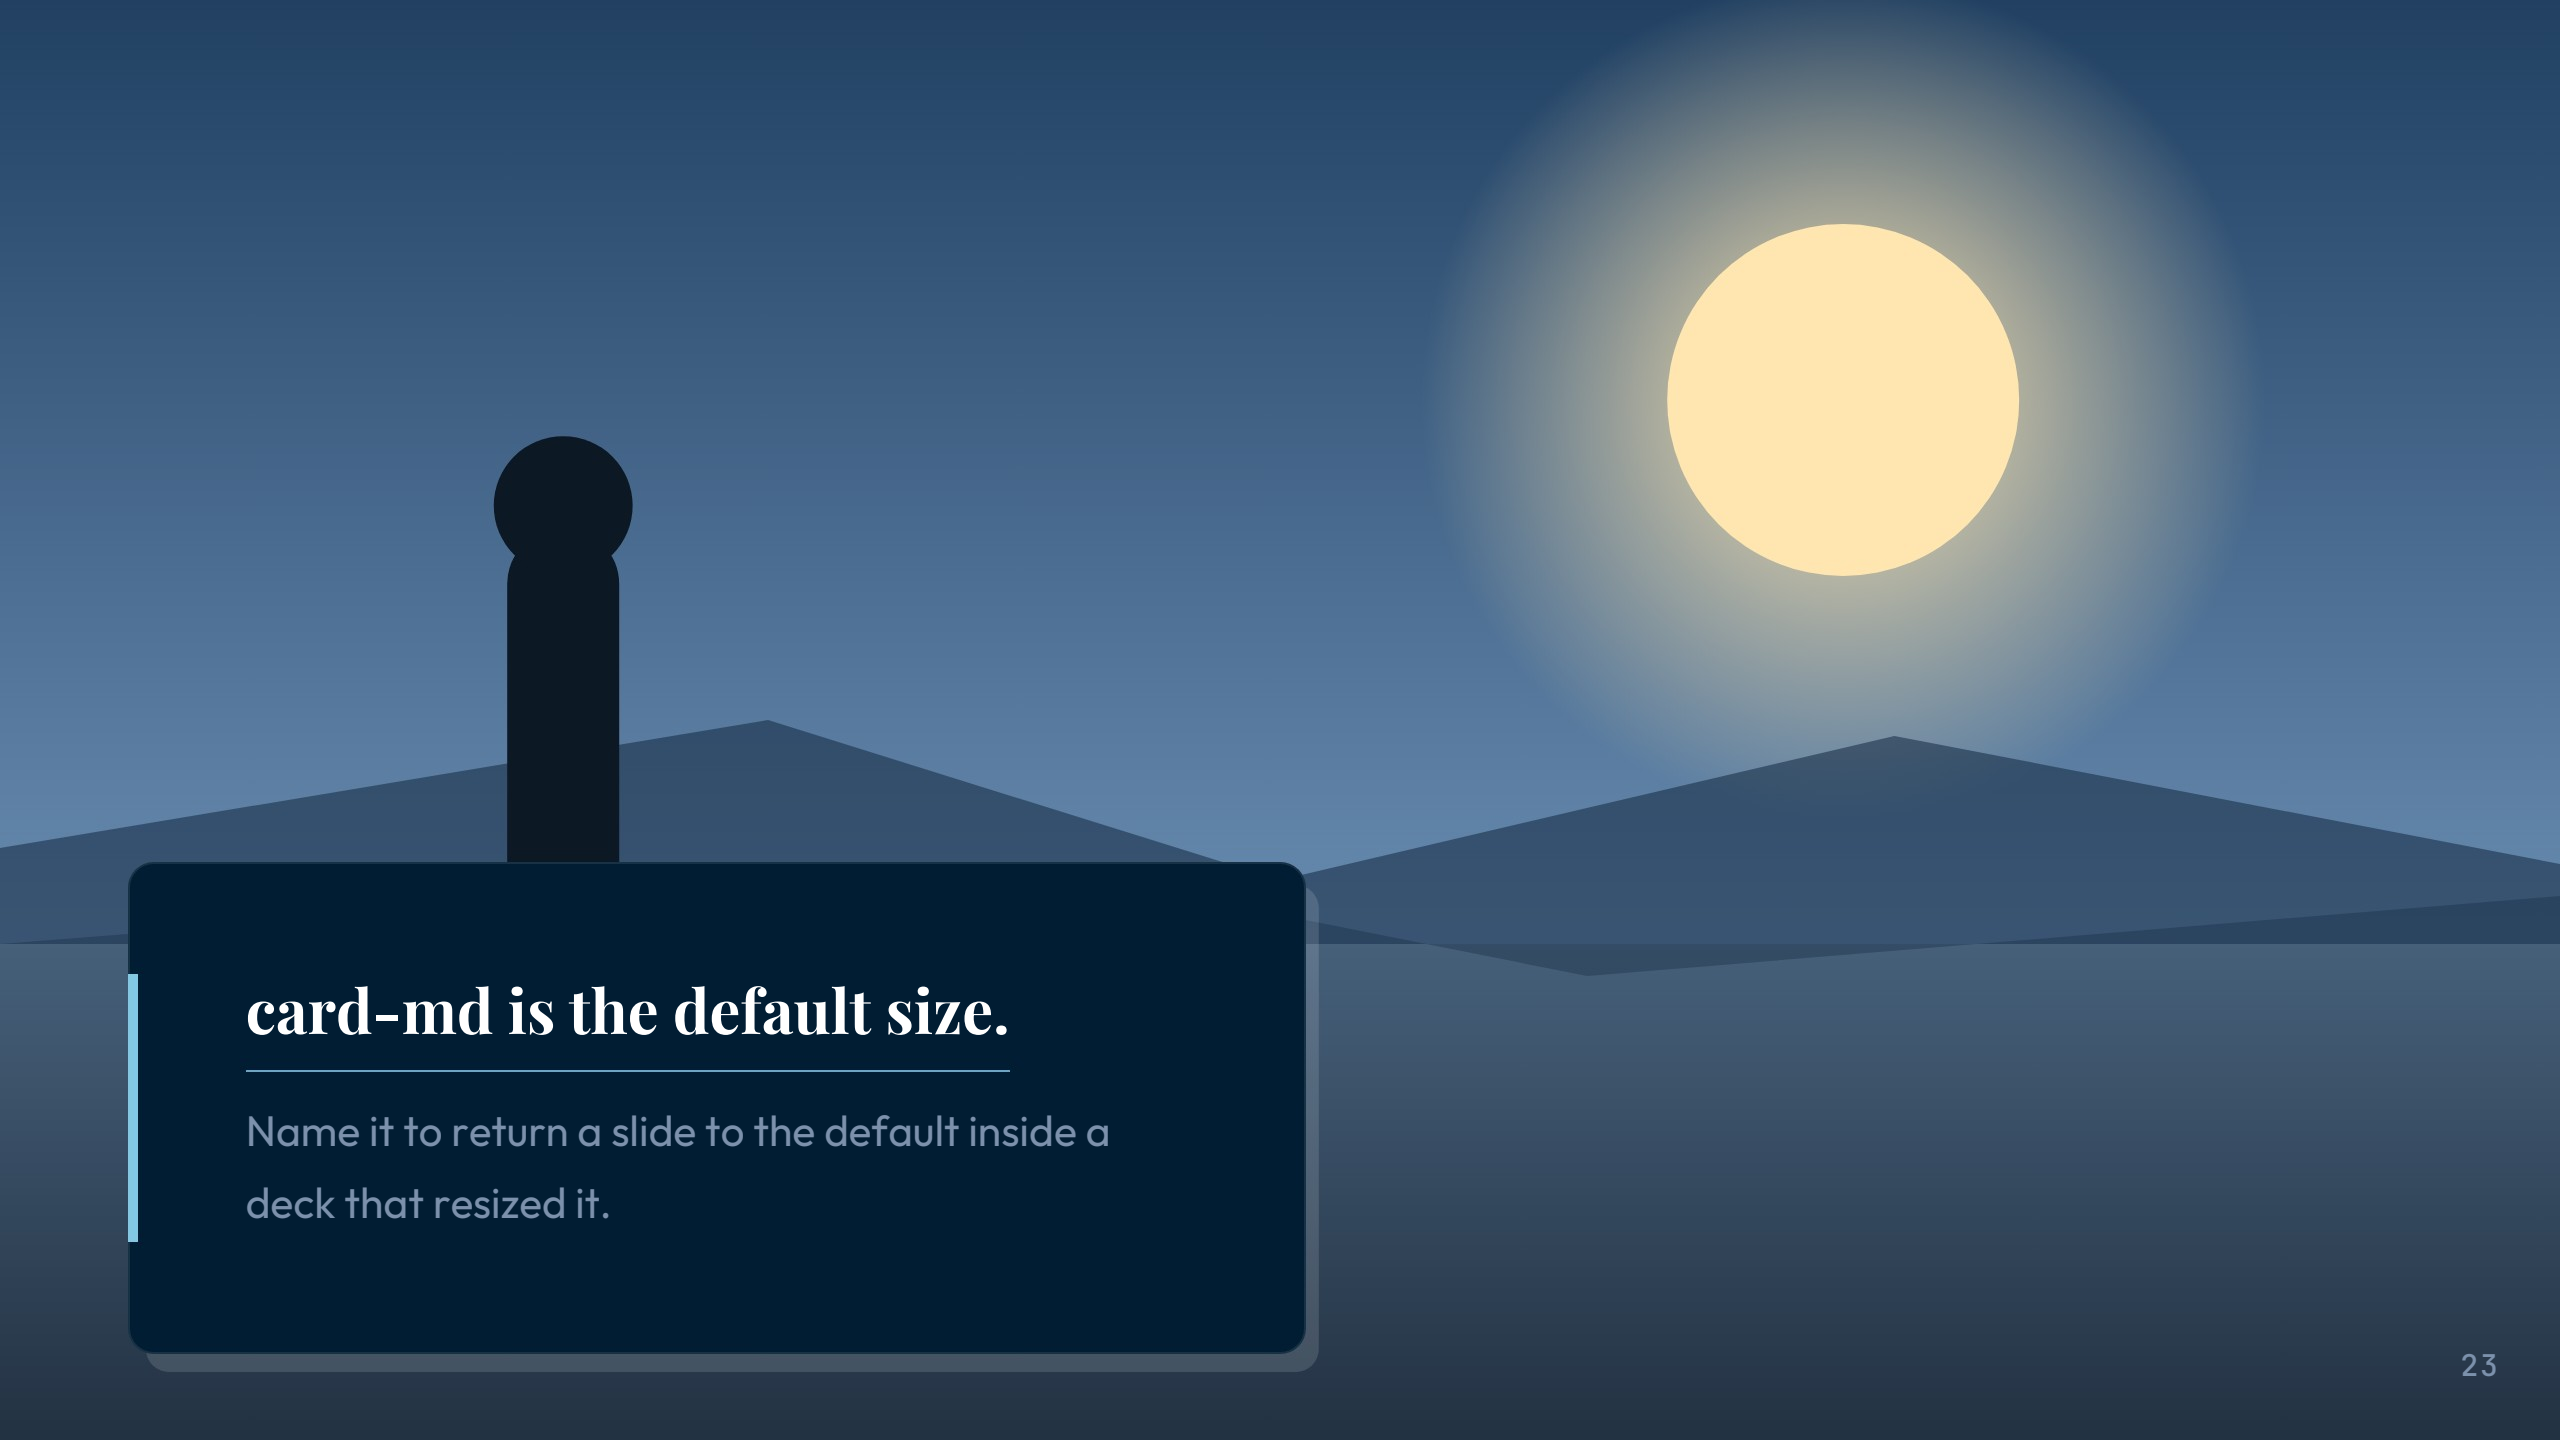

The card turns dark to match, whatever the deck palette.

ink-dark sets dark words on a light scrim.

For a bright photo: the scrim turns light and the title goes dark.

card-sm keeps
the card discreet.
Smaller type and a narrower card
leave the photo the slide.

card-md is the default size.

Name it to return a slide to the default inside a deck that resized it.

card-lg lets the message lead.

Wider card, bigger heading, room for a longer line.

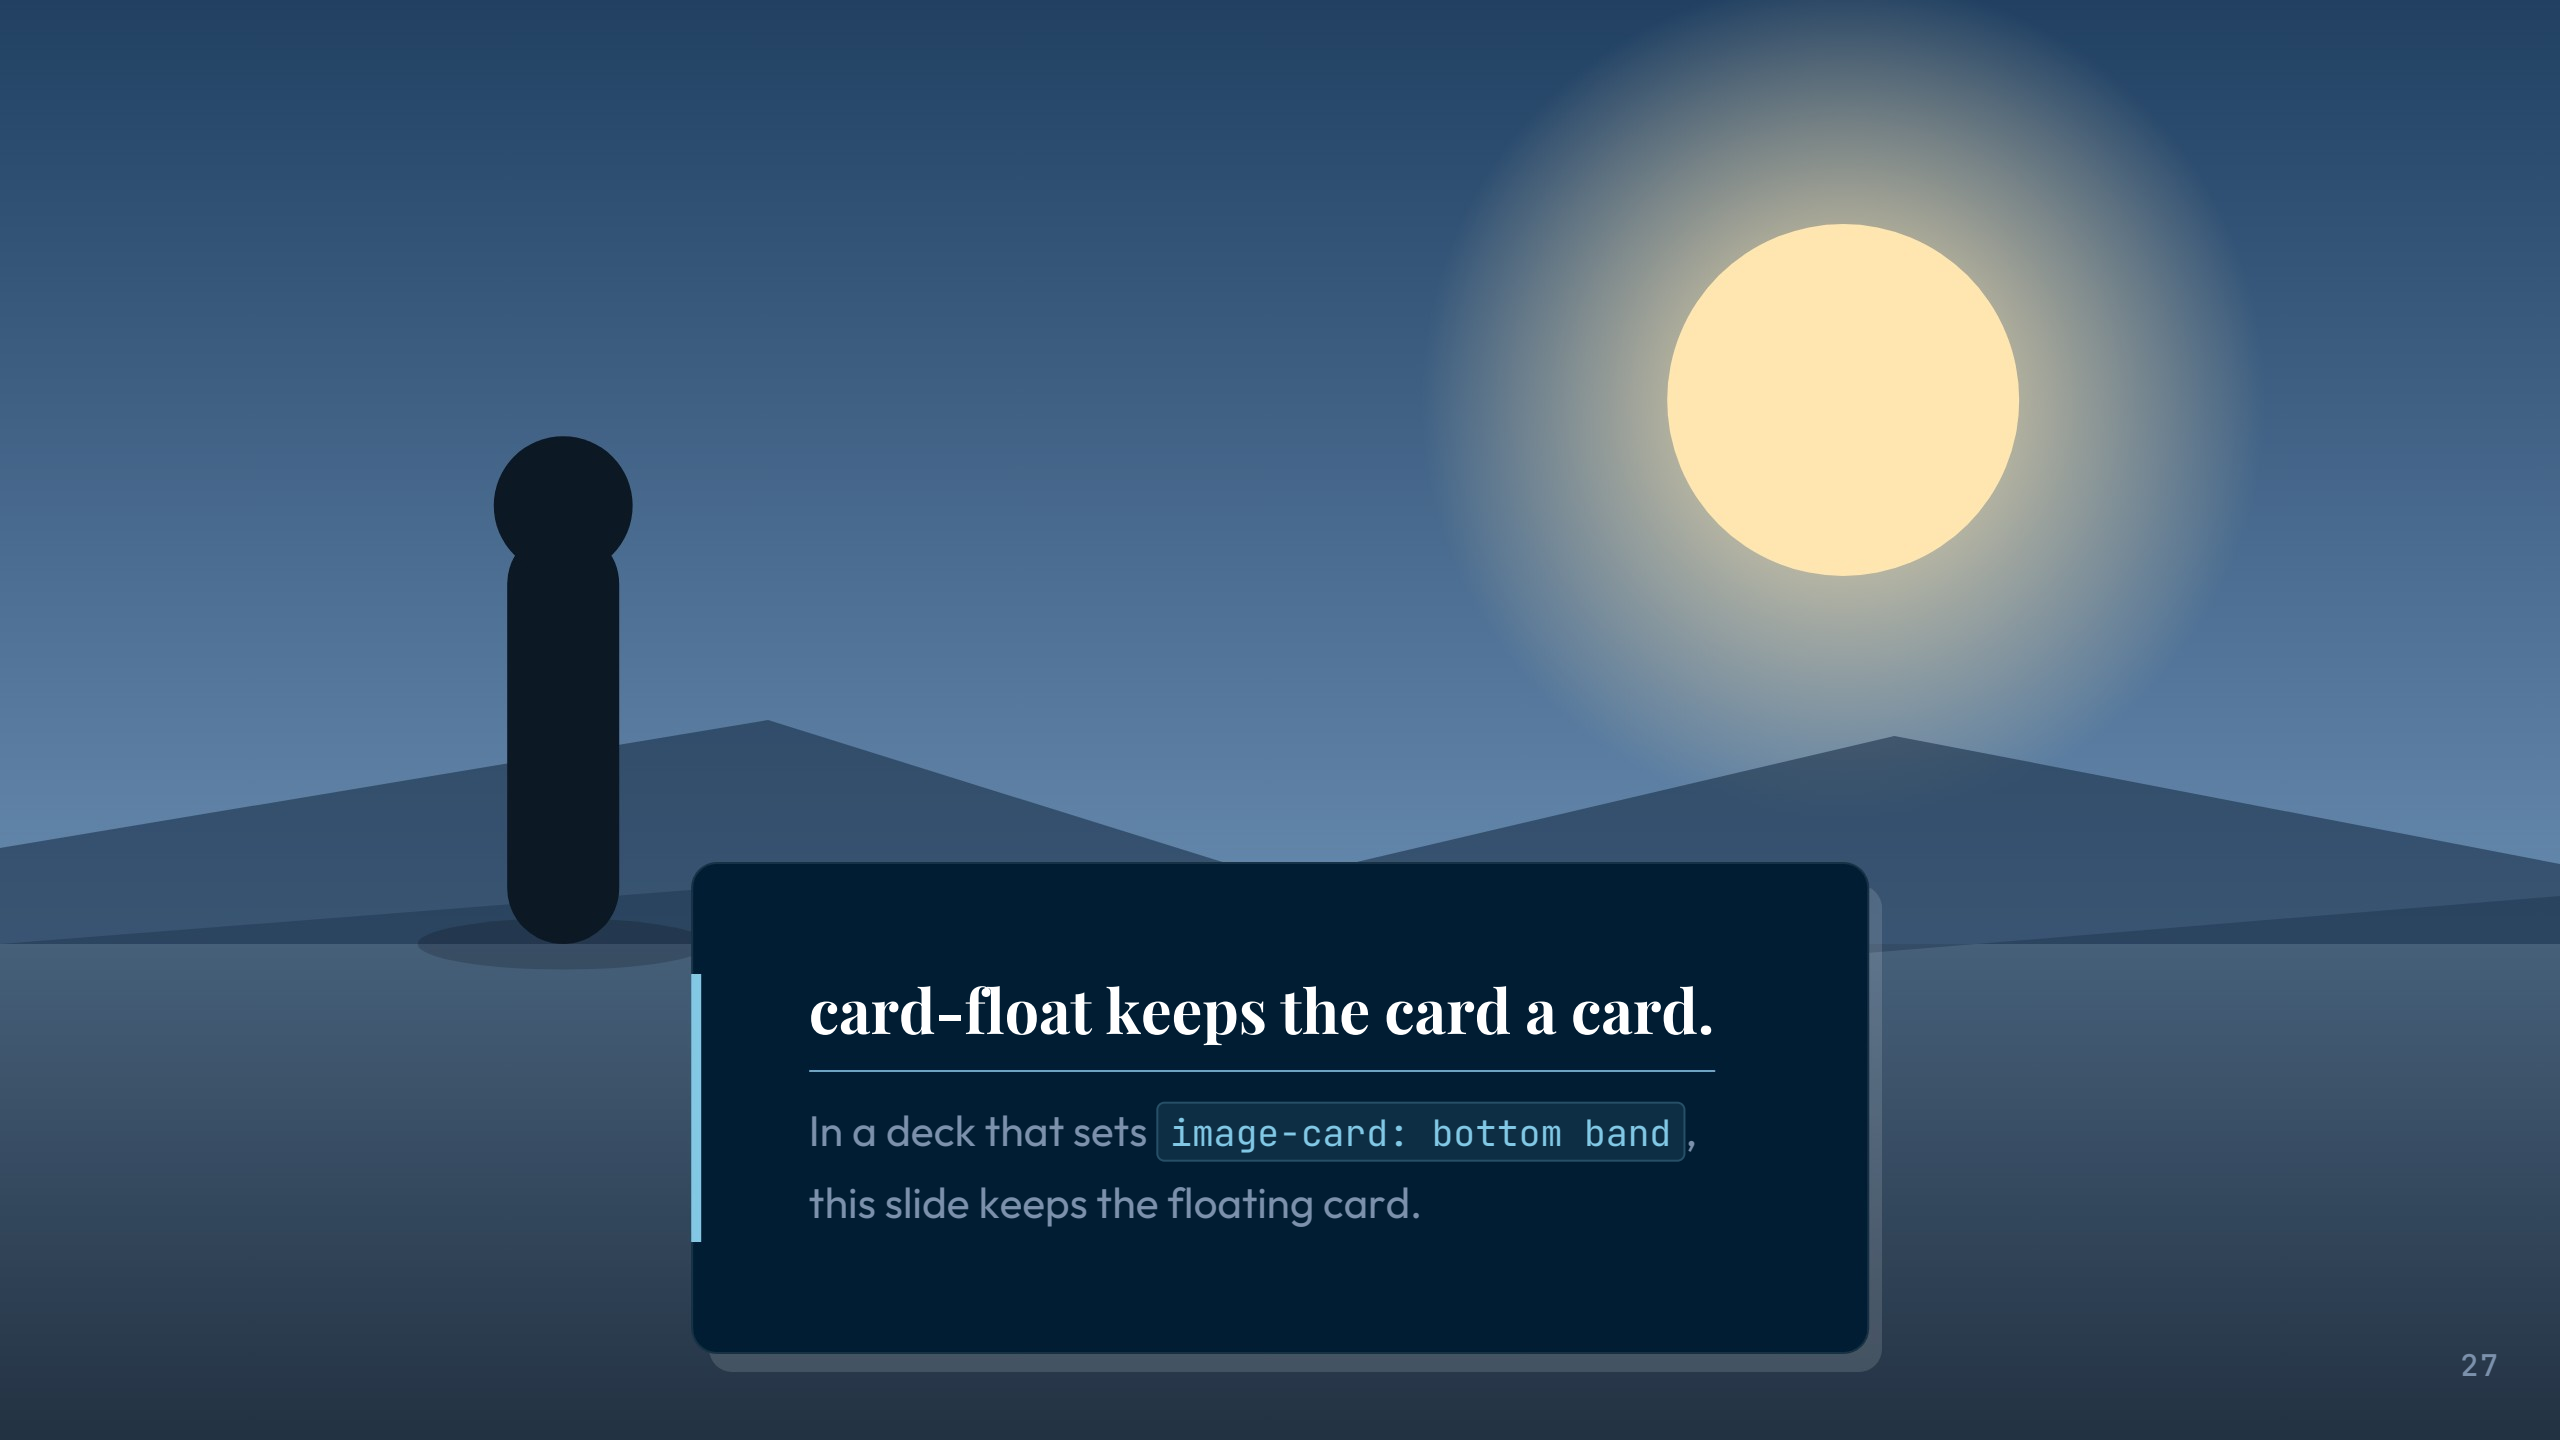

card-regular keeps the default spacing.

In a deck that sets `image-card: compact`, this slide keeps the roomier card.

band keeps the middle of the photo clear.

The heading takes the left column and the text the right, in one short strip along the edge.

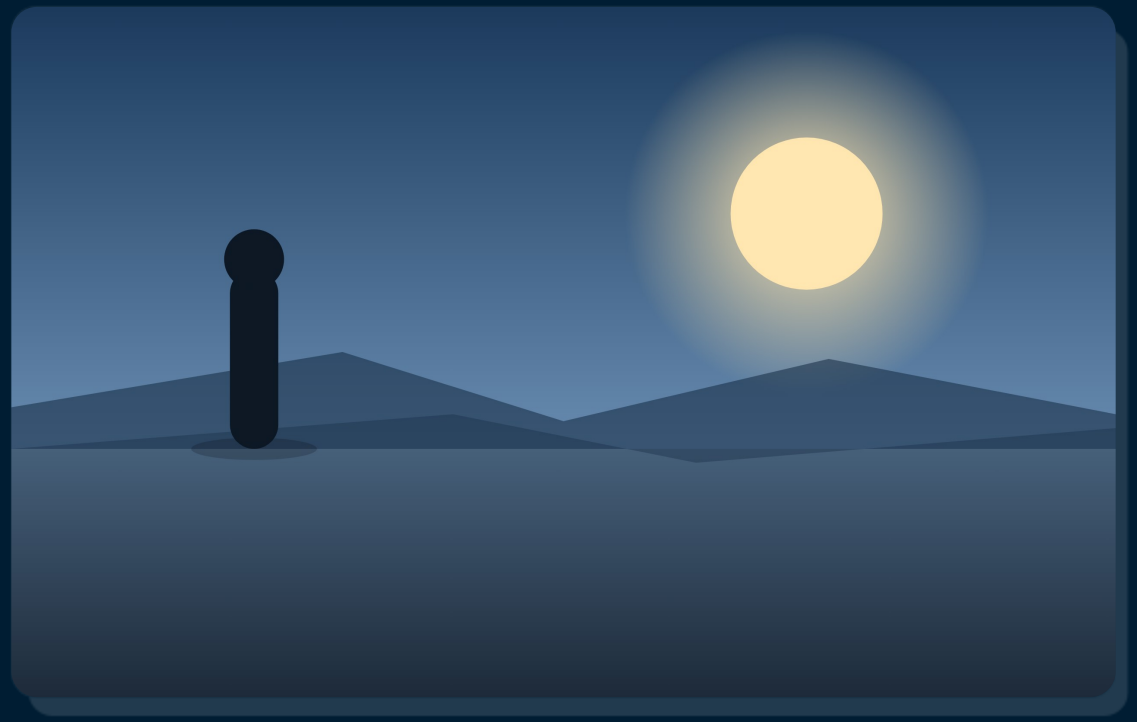

card-float keeps the card a card.

In a deck that sets `image-card: bottom band`, this slide keeps the floating card.

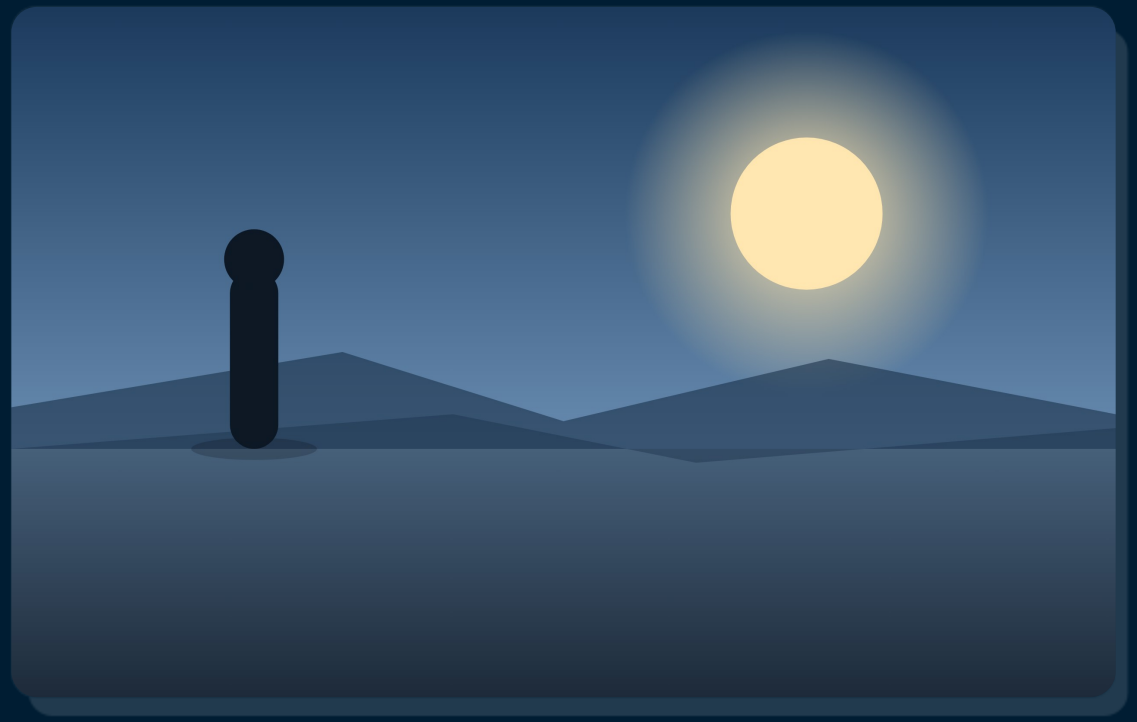

The image layout reads the asset’s shape.

Two-thirds of trials that reach the first generated report convert to paid; the ones that stall at workspace setup almost never do. Hand the layout any photo — it resolves the composition from the asset's shape.

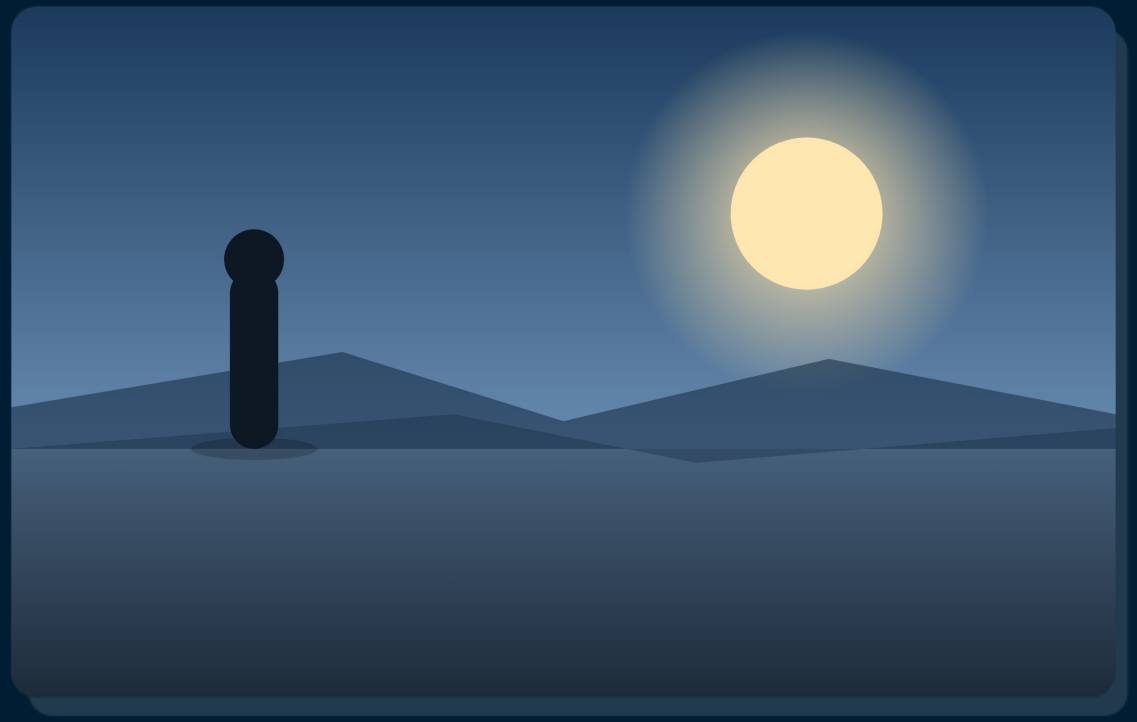

The image layout reads the asset’s shape.

Two-thirds of trials that reach the first generated report convert to paid; the ones that stall at workspace setup almost never do. Hand the layout any photo — it resolves the composition from the asset's shape.

When NOT to reach for image.

Decorative stock photo

A generic photograph of 'people in a meeting' next to a content slide is filler. Use `content` and trust the prose; reserve image for visuals that argue for themselves.

Image too small to read

A diagram or screenshot small enough to fit inside a half-canvas text slot is unreadable from the back of the room. Reach for `image gallery` (contains it whole) or `image spotlight`, or move the diagram to its own `diagram` slide.

Image with five paragraphs of caption

If the prose dominates and the image is a sidebar, you have a `content` slide that happens to have a photo. Either trust the image (drop the prose) or trust the prose (drop the image).

Related components

See also.

`diagram` — the visual is a Mermaid graph, not a photo or screenshot

`content` — the slide is mostly prose with one inline visual

`title` — the image is a bookend hero, not the body of a slide

`quote` — the slide is a quotation, not an image
