Inventory · Ledger · Structure

actors

Roster of responsibilities owned by named actors.

The actors ledger names who owns what.

Owns one row — Each actor

A verb-first responsibility, twelve words at most.

Reads top to bottom — The ledger

Order carries seniority or sequence.

Answers by name — The role chip

The inline code names the seat.

Stops at six rows — This layout

Past six, reach for list-tabular.

Seven rows is where the ledger maxes out.

Row one	Even at the ceiling, every row keeps a verb-first responsibility line.	First seat
Row two	Eighteen words is the hard budget; this row spends most of them deliberately.	Second seat
Row three	Rows stay parallel or the column of chips stops lining up.	Third seat
Row four	Middle rows read fastest; bury nothing important here.	Fourth seat
Row five	The eye is tiring by now — keep these short.	Fifth seat
Row six	The soft ceiling was one row ago.	Sixth seat
Row seven	The hard stop; an eighth row means a second slide.	Last seat

The actors ledger names who owns what.

Owns one row — Each actor

Past six, reach for list-tabular.

When NOT to reach for actors.

Process sequence

If the rows describe stages in order, use list-steps or process-flow. actors is for parallel ownership, not handoff sequence.

Long per-actor prose

More than one sentence per row crowds the ledger. Move the detail to a dedicated slide and keep actors as the index.

Roles without names

If the labels are job titles in the abstract ("the engineer"), reach for cards-stack or list. The actors layout earns its weight when the names are named.

Related components
