Inventory · Ledger · Structure

list-tabular

Hairline-ruled ledger of items — name on the left, body on the right.

The tabular list rules rows into a register.

01	**Rows**	Label, clause, optional meta line.	TWELVE SOFT · SIXTEEN HARD
02	**Looks**	Eight named looks reskin the rows.	DEF · SPEC · REGISTER
03	**Escalation**	Long content leaves for a table.	SPLIT PAST SIX ROWS

def pairs each term with its role.

TERM
01 **Label** def styles the register as definitions.

ROLE
02 **Chip** The inline code becomes a right-hand chip.

CLAUSE
03 **Body** One clause under each term.

metric turns the chips into figures.

01	Rows carry values	12 / 16
02	Figures right-align	100%
03	Labels stay short	4 rows

spec documents flags and their types.

01	LATTICE_THEME	spec sets code labels beside type chips.	STRING
02	LATTICE_DEBUG	One clause explains each flag.	BOOL

register pairs names with status chips.

01	cards-grid	STABLE
02	split-panel	STABLE
03	radar	BETA
04	word-cloud	PREVIEW

rule draws a hairline under every row.

ON

01 **Hairlines** rule adds the horizontal separators.

SAME

02 **Density** Budgets do not change with the look.

solid fills the register with panel color.

01	Net new rows	4
02	Panel fill	on
03	Best for	headline metrics

stacked drops the clause under its label.

01 GET /PLANS/:NAME — 200 | 404

stacked gives each row two decks of text.

02 GET /GALLERY/:NAME — 200

The clause wraps below, full width.

outline boxes each row in a keyline.

01	cards-grid	STABLE
02	split-panel	STABLE
03	quote	STABLE

fit-name lets short labels keep their own width.

01	API	The label column shrinks to the longest label.
02	CLI	Nothing is padded out to a fixed track.
03	SDK	The clause takes every pixel that is left.

fit-body hugs the clause and holds the right edge.

01	**Settlement window**	Same day cutoff	T+1
02	**Reconciliation cadence**	Automated	NIGHTLY
03	**Exception review**	Risk committee	WEEKLY

fit-meta keeps a long trailing value on one line.

01	Coverage	98.4% OF POLICIES
02	Backlog	31 OPEN FINDINGS
03	Cadence	EVERY TWO WEEKS

flex-name hands the slack to the label.

01	Board approval of the revised treasury policy	Q3
02	Migration of the settlement ledger to the new engine	Q4
03	Retirement of the legacy reconciliation batch	Q1

flex-meta gives the trailing column the room.

01	Scope	Phase 1	RETAIL AND COMMERCIAL DEPOSITS, TWELVE MARKETS
02	Owner	Phase 1	GROUP TREASURY, REPORTING TO THE CFO
03	Review	Phase 2	AUDIT AND RISK COMMITTEE, QUARTERLY

fixed pins the columns to their old widths.

01	ID	Every label column is the same width again.
02	Mid	Use it when a deck was tuned around those tracks.
03	Long enough to wrap	The label wraps inside its fixed track.

Six rows is the register's practical page.

01	title	STABLE
02	big-number	STABLE
03	cards-grid	STABLE
04	split-panel	STABLE
05	funnel	STABLE
06	radar	BETA

When NOT to reach for list-tabular.

Three or fewer rows

The ledger needs density to justify its shape. For two to four items, reach for cards-stack — the rows get the room to breathe.

Long per-row prose

Each row is a name plus a sentence. If the description runs two or three sentences, move to cards-stack or split across slides.

Stacking two primary variants

`def`, `metric`, `spec`, and `register` are mutually exclusive. Pair each only with its secondary modifier (def+rule, metric+solid, spec+stacked, register+outline).

Related components

See also.

`glossary` — term/definition pairs with auto-derived range pill

`cards-stack` — two or three richer items, not a ledger

`actors` — the left column is a named person, not a key

`list` — rows are bullets without a label-plus-description shape
