5 components

statement

Statement — one declarative claim per slide.

big-number · one number, the whole canvas

1

claim per slide is what this layout enforces — the number argues, the caption stays to a line.

statement · content

The content slide is the plainest tool in the box.

A heading that makes one claim, then a paragraph or short list that delivers it.

When no specialized layout fits, this is the honest default.

Growth is a change in thinking, not title.

Six cognitive verbs map the questions an engineer learns to ask — your level is the highest verb you reliably own, and how far that thinking travels.

01	**Remember**	Recall facts, syntax, rules.	How is this done?
02	**Understand**	Explain behavior and dependencies.	Why does it work?
03	**Apply**	Use patterns in new contexts.	How do I make it work here?
04	**Analyze**	Decompose across boundaries.	Where does it break?
05	**Evaluate**	Judge options against strategy.	Which option should win?
06	**Create**	Synthesize what isn't there.	What should exist?

> *A quotation earns the whole slide, or it does not belong on one.*

— THE QUOTE LAYOUT, STATING ITS OWN RULE

STATEMENT · SPLIT-PANEL

The featured panel makes the claim; this side supports it.

A dark left panel carries the headline, and the bright right column holds up to three supporting items.

split-panel · statement survey

Two zones, one argument

The split is hierarchy, not decoration — the panel claims, the column proves.

Three items is the comfort zone

A short title and one supporting line each, like this.

Prose stays on a budget

Sixteen words per item keeps the column scannable.
