hub-spoke

Hub and spoke — one center, its satellites, and what flows between them.

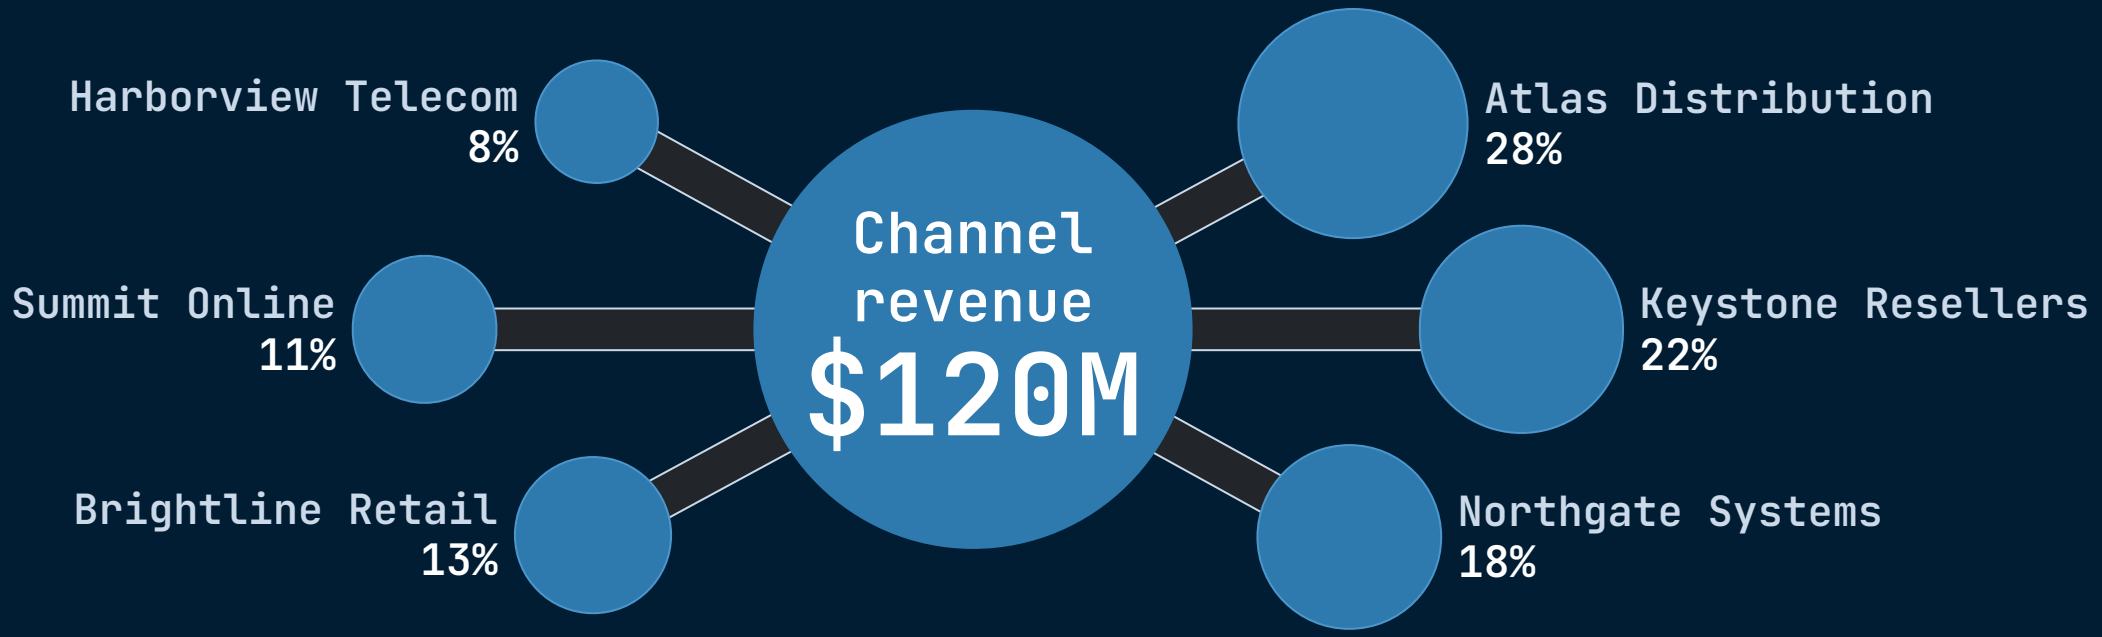

Transformation program · Workstream status · Q3

Two of six workstreams are off track.

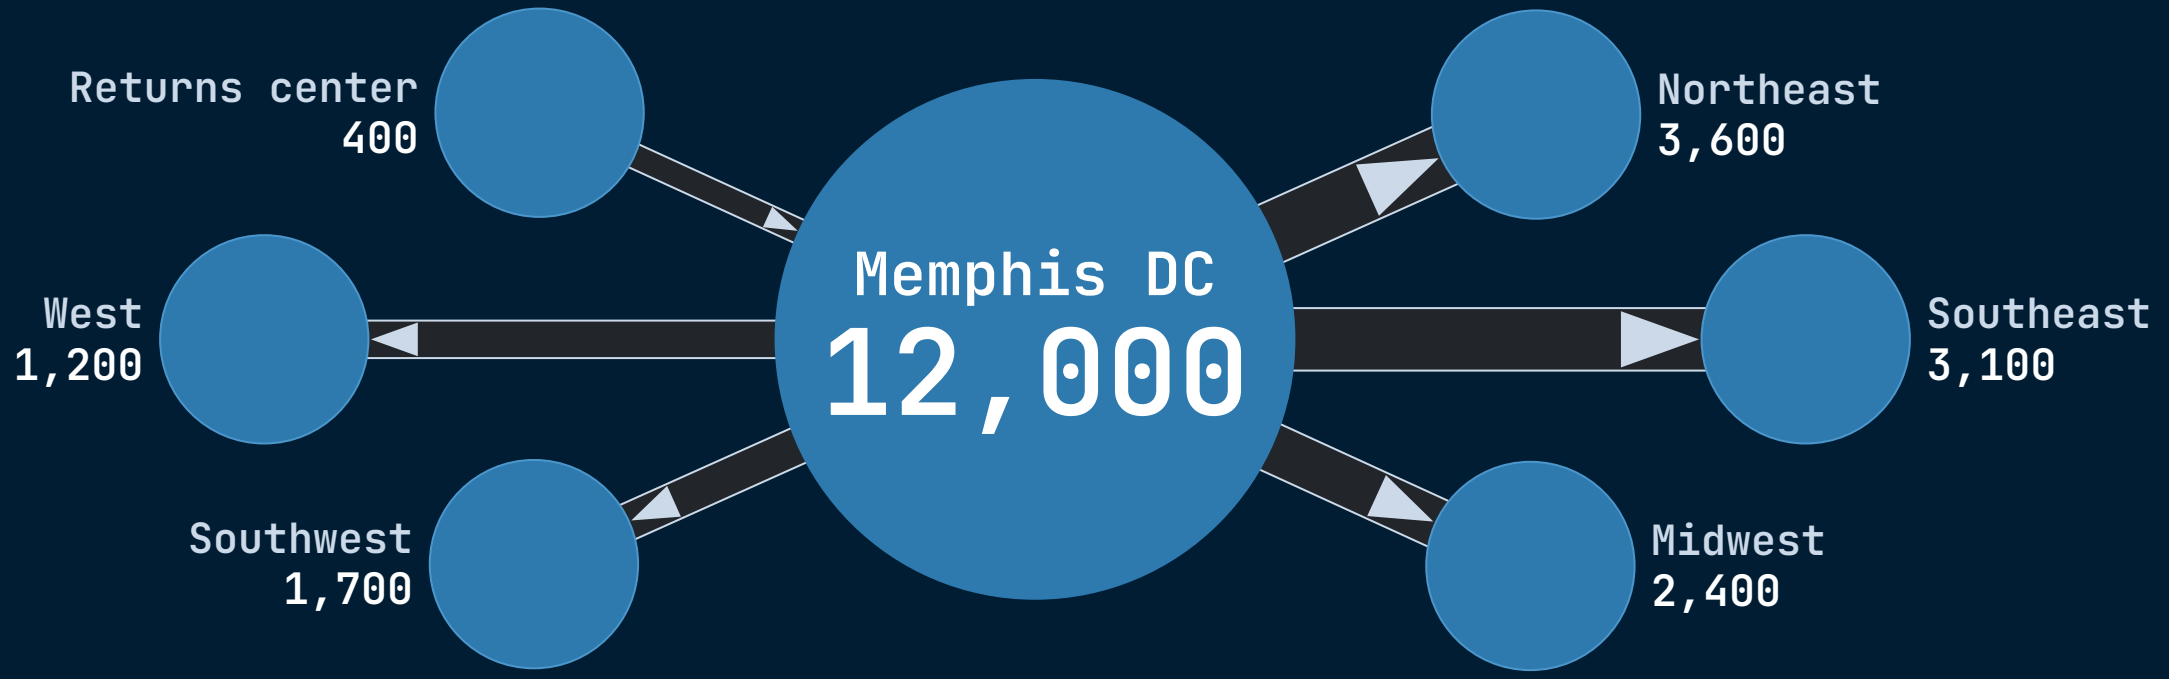

FY2026 · Partner channel revenue · share of $120M

Two partners carry half of channel revenue.

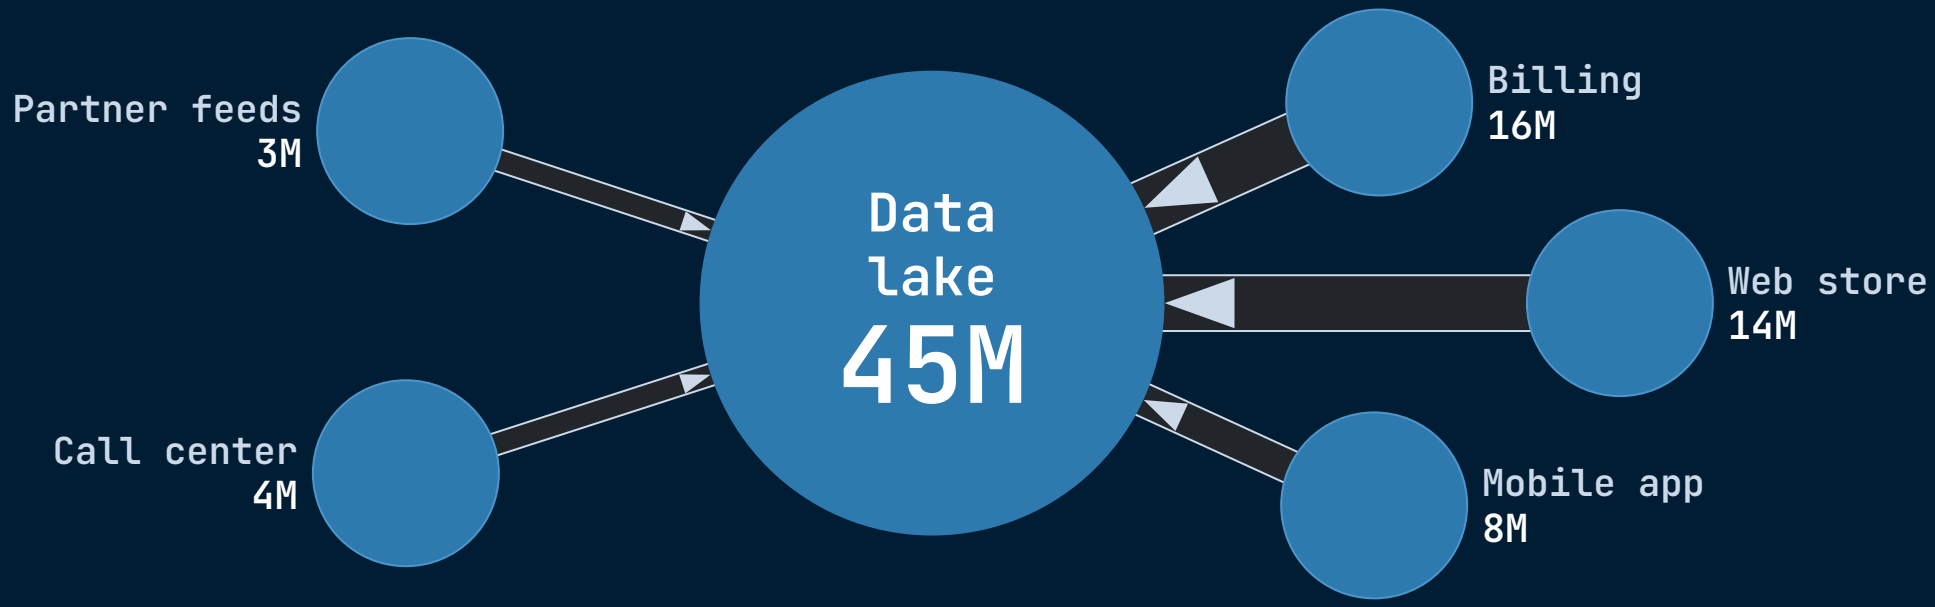

Memphis distribution center · Pallets per week

The Northeast and Southeast take over half of outbound volume.

Data platform · Records ingested per day

Billing and the web store send two thirds of what the lake takes in.

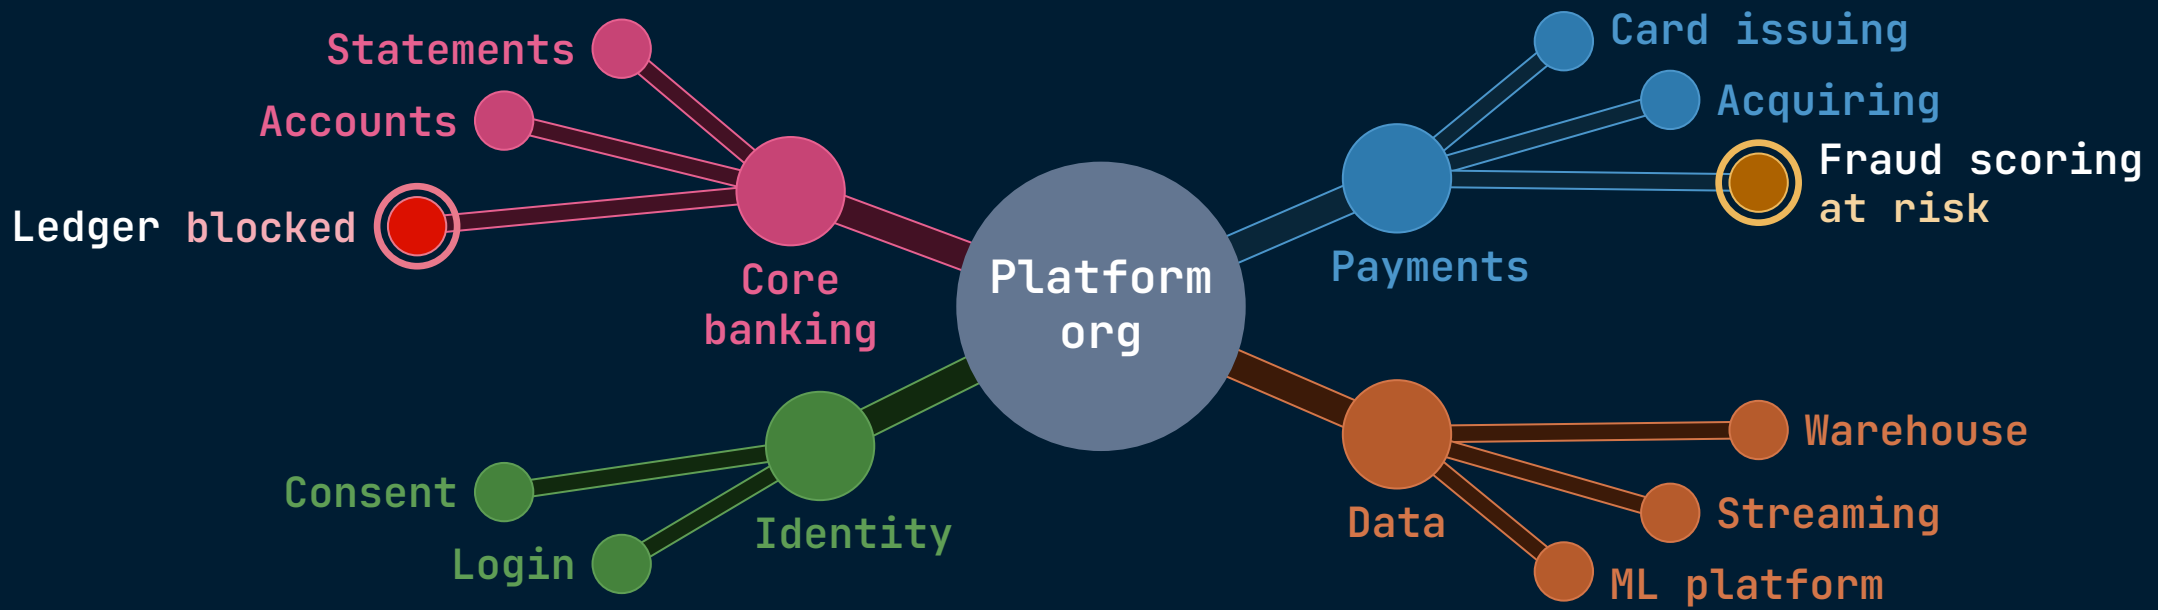

Shared services · Tickets per month

Finance and HR trade the most work with the service desk.

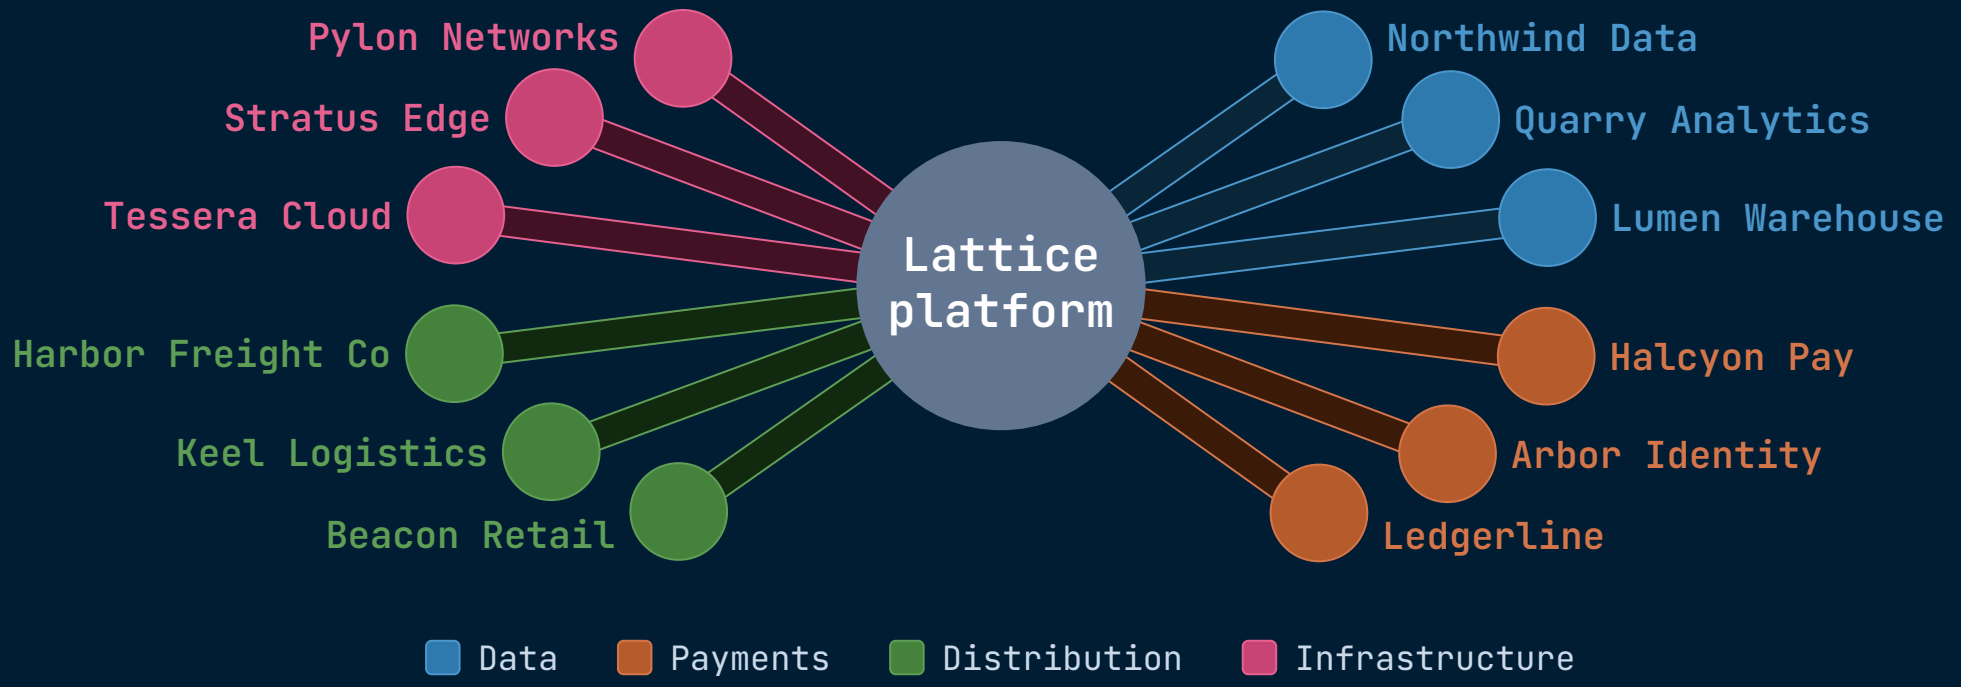

Platform organization · Service ownership · 2026

Four platform teams own eleven services; two are in trouble.

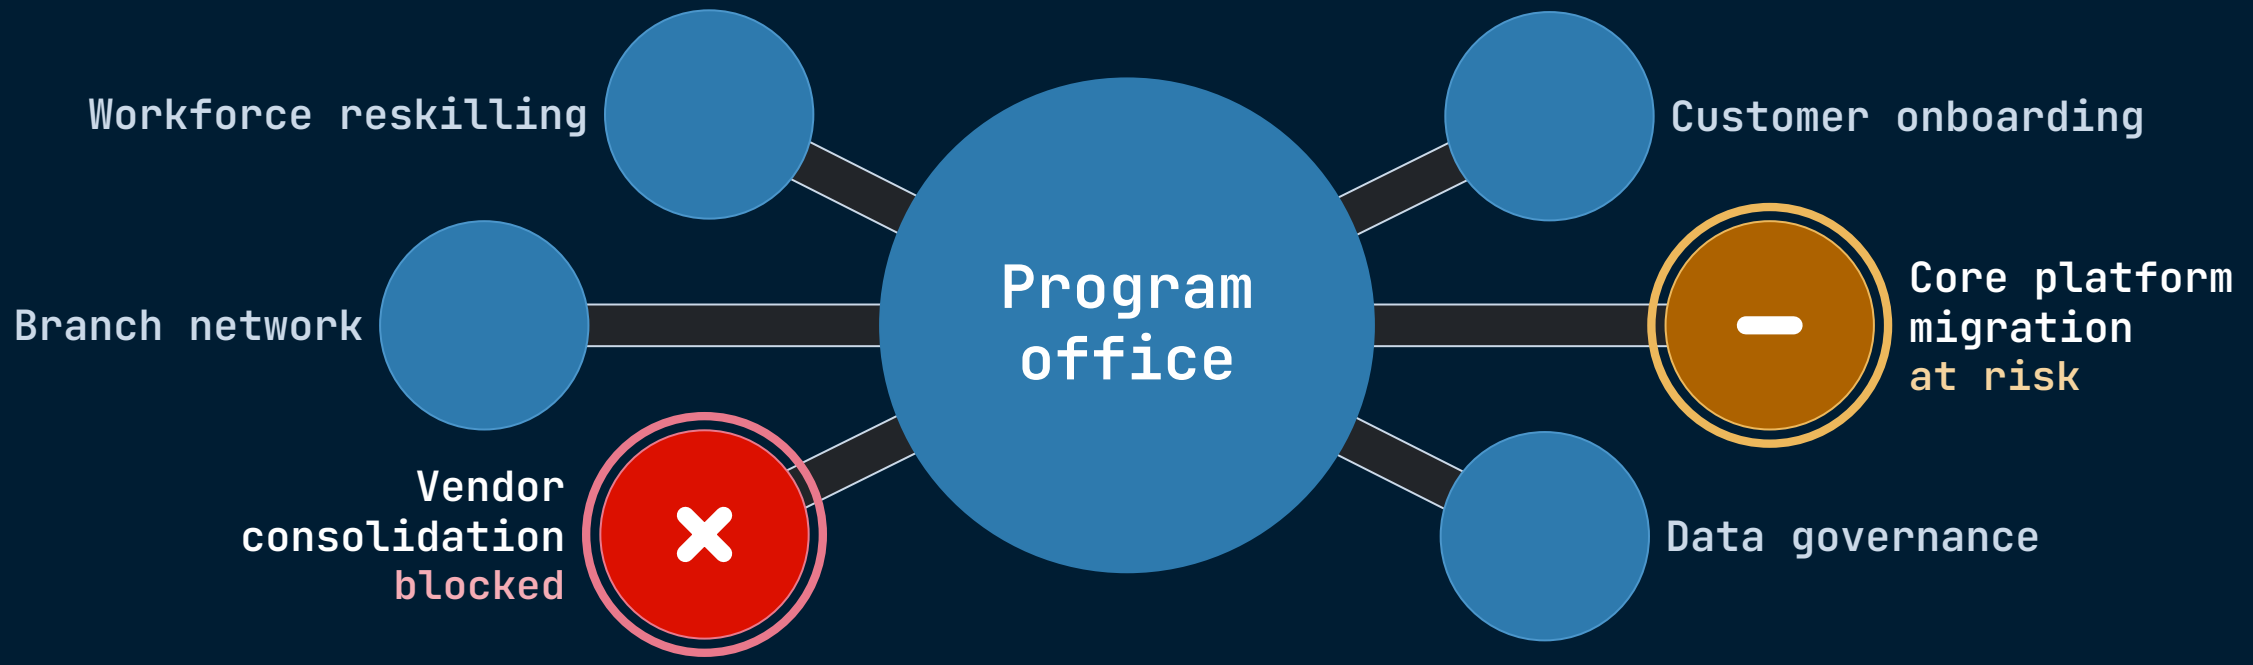

Partner ecosystem · By capability

Stress test — twelve partners across four capabilities, three apiece.

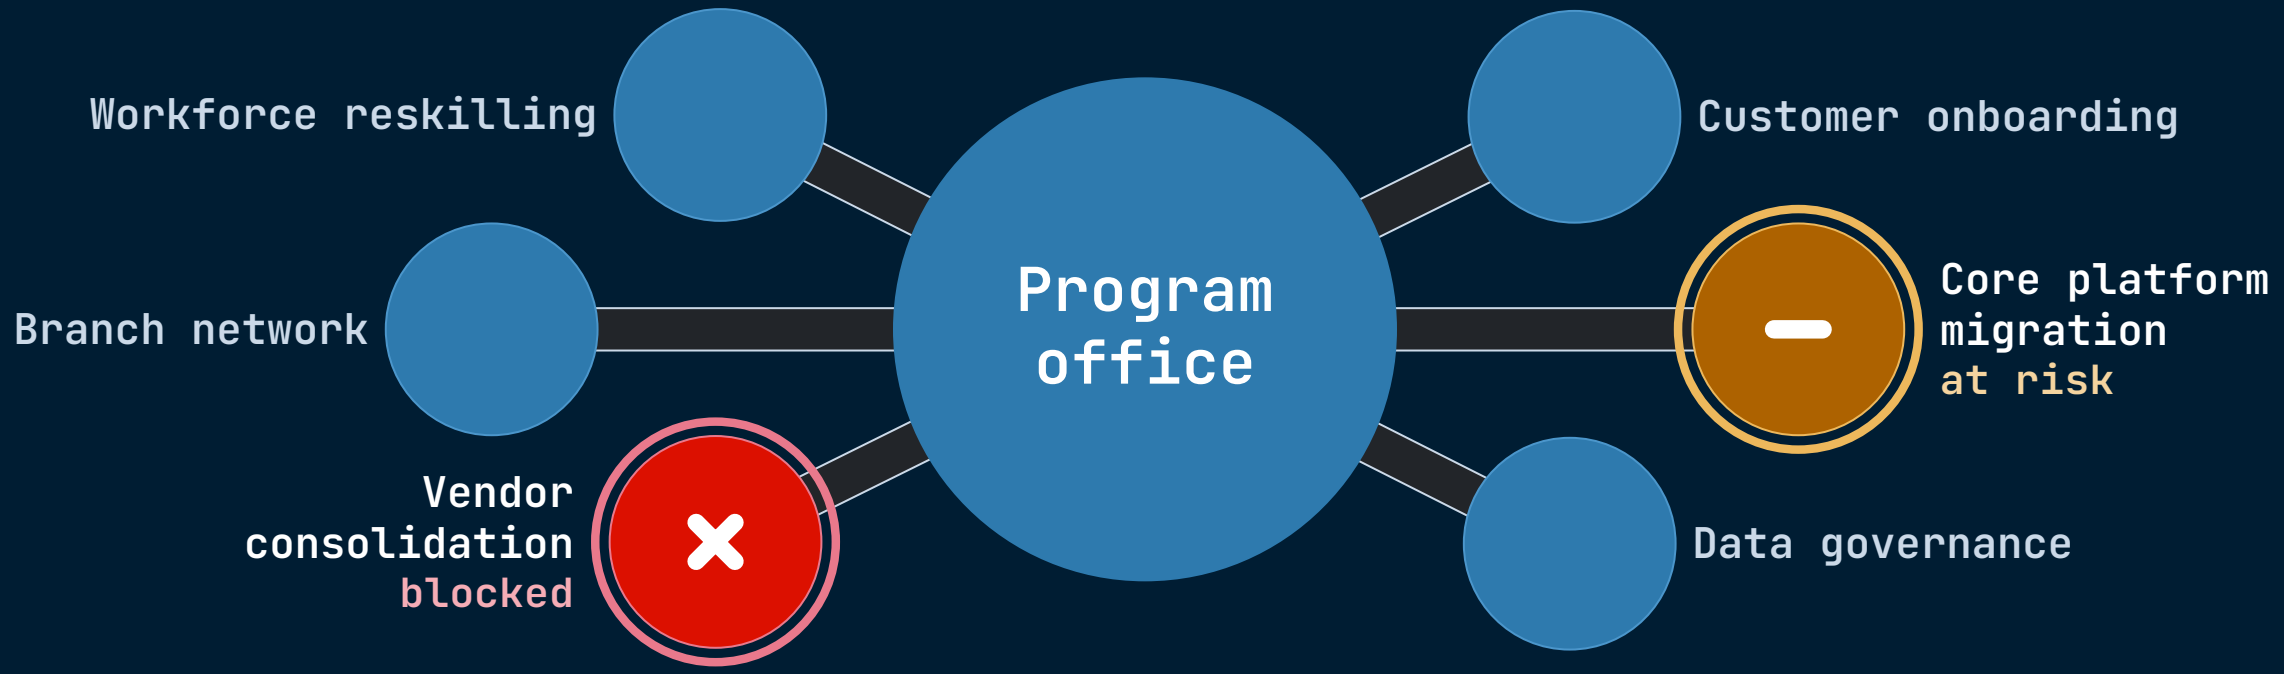

Transformation program · Workstream status · Q3

Two of six workstreams are off track.

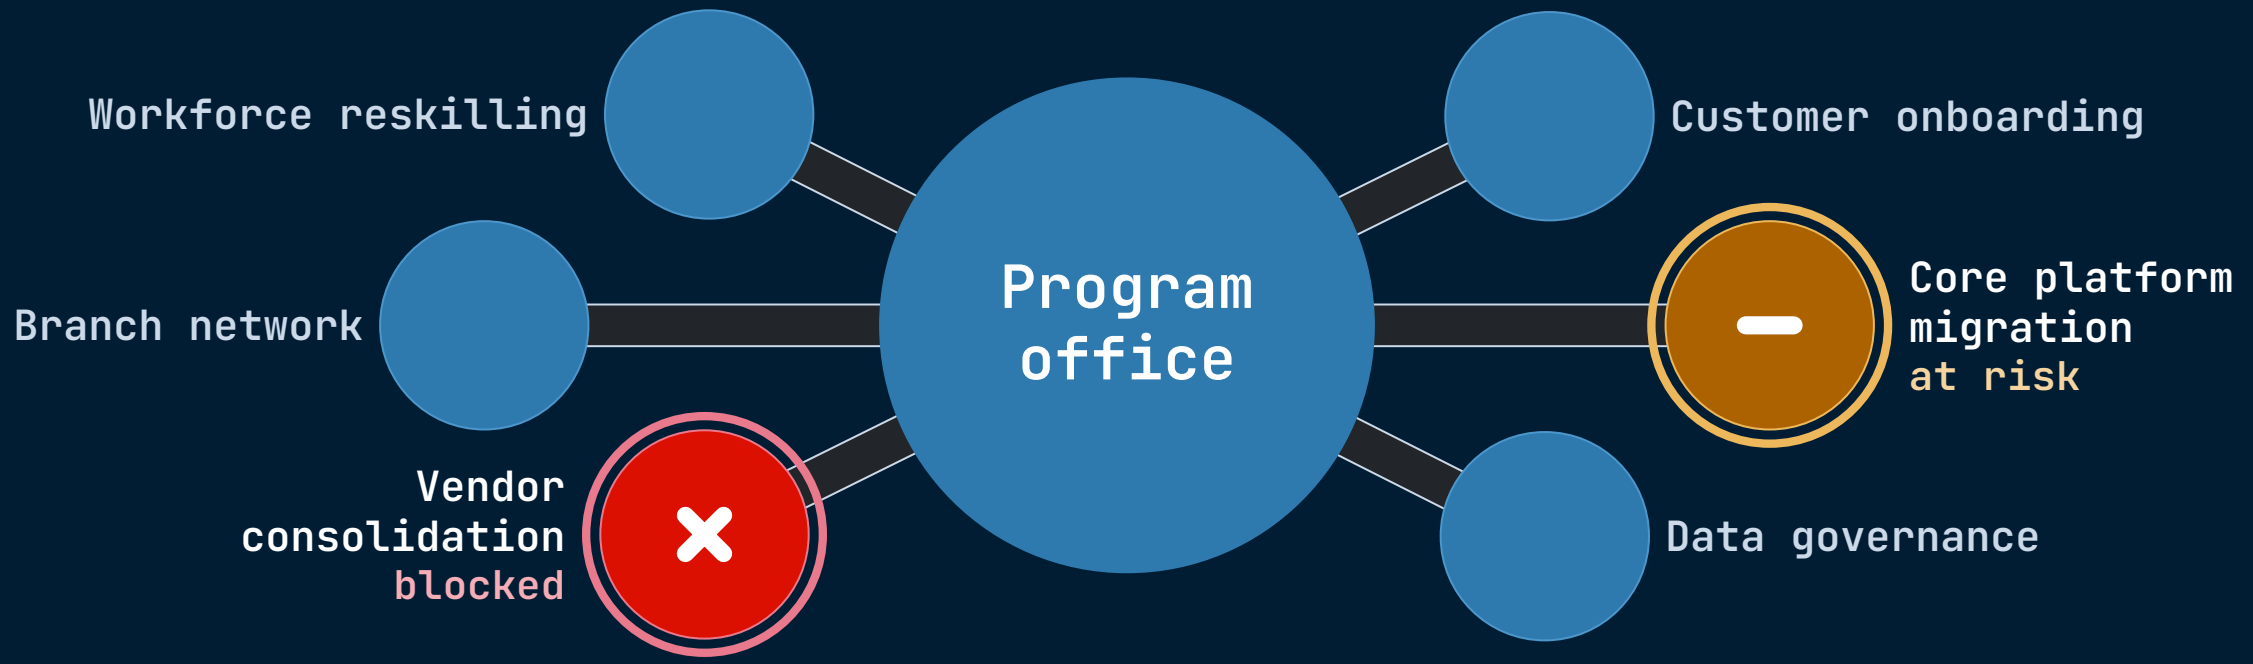

Transformation program · Workstream status · Q3

Two of six workstreams are off track.

Transformation program · Workstream status · Q3

Two of six workstreams are off track.

When NOT to reach for hub-spoke.

A ranking or a share

If the point is who is biggest, or how a total splits, use `bar` or `stacked-bar`. A length compares far better than a disc, and `sized` is a supporting cue here, not the evidence.

A network, not a star

Hub-spoke draws one center and its spokes. If the satellites connect to each other, or there are several centers, use `diagram` (Mermaid) for the graph.

When NOT to reach for hub-spoke.

A hue per satellite

Satellites are neutral on purpose: each one has its name beside it, so a color per satellite adds nothing and past six it invents false groups. Group them with a pill only when the grouping is part of the claim.

A process in order

Steps that happen one after another are a sequence, not a hub. Use `list-steps`, `funnel` or `timeline-list`.

Related components

See also.

`bar` — the claim is a ranking — lengths compare better than areas

`stacked-bar` — the claim is how one total splits into shares

`piechart` — three to six shares of one whole, and the proportion is the story

`diagram` — the satellites connect to each other, or there is more than one center

`state-chart` — the arrows are transitions between states, not flows to a center
